Programmable Terminals

Host Connection Manual

Revised September 2023

Introduction

Thank you for purchasing an NB-series Programmable Terminal.

NB-Series Programmable Terminals (PTs) are designed to handle information generated in FA production sites. Be sure to understand the functions and performances etc thoroughly before using PT correctly.

In this manual, both the NB□□-TW□□B and NB□□-TW□□B-V1 are indicated by the notation of NB□□-TW□□B(-V1). For example, NB3Q-TW01B and NB3Q-TW01B-V1 are indicated as NB3Q-TW01B(-V1).

Intended Audience

This manual is intended for the following personnel, who must also have knowledge of electrical systems (an electrical engineer or the equivalent).
- Personnel in charge of introducing FA systems into production facilities.
- Personnel in charge of designing FA systems.
- Personnel in charge of installing and connecting FA facilities.
- Personnel in charge of managing FA systems and facilities

General Precautions

- The user must operate the product according to the performance specifications described in the operation manuals.
- Do not use the PT touch switch input functions for applications where danger to human life or serious property damage is possible, or for emergency switch applications.
- Before using the product under conditions which are not described in the manual or applying the product to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment, and other systems, machines and equipment that may have a serious influence on lives and property if used improperly, consult your OMRON representative.
- Make sure that the ratings and performance characteristics of the product are sufficient for the systems, machines, and equipment, and be sure to provide the systems, machines, and equipment with double safety mechanisms.
- This manual provides information for connecting and setting up an NB-Series PT. Be sure to read this manual before attempting to use the PT and keep this manual close at hand for reference during installation and operation.

NB-series Manuals

NB-series manuals are organized in the sections listed in the following tables. Refer to the appropriate section in the manuals as required.

Programmable Terminals Host Connection Manual (Cat. No. V108) (This Manual)

Section	Contents
Section 1 List for All PLCs Supported by NB series	This section lists all PLCs supported by NB Units.
Section 2 Connecting to SIEMENS PLCs	This section describes the connection to SIEMENS PLCs.
Section 3 Connecting to Mitsubishi PLCs	This section describes the connection to Mitsubishi PLCs.
Section 4 Connecting to Schneider PLCs	This section describes the connection to Schneider PLCs.
Section 5 Modbus Connection	This section describes the connection on Modbus protocol.
Section 6 Connecting to Delta PLCs	This section describes the connection to Delta PLCs.
Section 7 Connecting to LSIS PLCs	This section describes the connection to LSIS PLCs.
Section 8 Connecting to Panasonic Industrial Devices SUNX PLCs	This section describes the connection to Panasonic Industrial Devices SUNX PLCs.
Section 9 Connecting to Allen-Bradley (Rockwell) PLC	This section describes the connection to Allen-Bradley PLC.
Section 10 Connecting to PLC of GE Fanuc Automation Inc.	This section describes the connection to PLC of GE Fanuc Automation Inc.
Section 11 Connecting to Keyence PLCs	This section describes methods to connect to Keyence PLCs.
Section 12 Connecting to OMRON Safety Controller	This section describes the connection to OMRON Safety Controller.

Programmable Terminals NB-Designer Operation Manual (Cat. No. V106)

Section	Contents
Section 1 Introduction	This section provides an outline of the NB-series PTs, including their functions, features, connection types and communication methods.
Section 2 Installation and Startup of NB-Designer	This section describes how to install and start the NB-Designer.
Section 3 Functions of NB-Designer	This section describes the functions of NB-Designer.
Section 4 Functions of NBManager	This section describes the functions of NBManager.
Section 5 Maintenance and Abnormality Handling	This section describes the maintenance and check to prevent the abnormality occurrence and the handling of the abnormalities occurred in NB Unit.
Section 6 Functions Related to External Memory	This section describes the functions related to external memory.
Section 7 Pictbridge Printing	This section describes the Pictbridge printing function.
Section 8 Web Interface	This section describes the Web Interface function.
Appendices	The appendices provide lists of the NB Units, the Communication Units, the applicable PLCs, the registers supported by PLC, and the list of NB-Designer functions.

Programmable Terminals Setup Manual (Cat. No. V107)

Section	Contents
Section 1 Part Names and Functions	This section describes the names and functions of the various parts of an NB Unit.
Section 2 Installing the NB Unit and Connecting Peripheral Devices	This section describes the methods used to install the NB Unit and connect peripheral devices.
Section 3 System Setting Mode	This section describes the System Setting Mode.
Section 4 Calibrate Mode	This section describes the Calibrate Mode.
Appendices	The appendices provide information on specifications, dimensions, wirings, and lists of the NB Units, the applicable PLCs and options.

Programmable Terminals Startup Guide Manual (Cat. No. V109)

Section	Contents
Section 1 NB Overview	This section provide specifications of the NB Unit, describes its names and functions of the various parts.
Section 2 System Design	This section describes the manual structure, takes NB7W as an example to introduce the operation procedures of the NB system.
Section 3 Installation and Wiring	This section describes how to install and wire the NB Unit.
Section 4 Screen Creation	This section describes how to create a demonstration project through NB-Designer.
Section 5 Run	This section describes how to start running at the Host side and prepare to send screen data to NB7W.
Section 6 Maintenance and Troubleshooting	This section describes the maintenance and inspection methods for preventing errors occurring, and troubleshooting measures when errors occur.

⚠ WARNING	Failure to read and understand the information provided in this manual may result in personal injury or death, damage to the product, or product failure. Please read each section in its entirety and be sure you understand the information provided in the section and related sections before attempting any of the procedures or operations given.

Manual Structure

Page Structure and Icons

The following page structure and icons are used in this manual.

Level 3 heading

Step in a procedure
Indicates a step in a procedure.

Special Information
(See below.)
Icons are used to indicate precautions and additional information.

Manual name

Level 1 heading
Level 2 heading
Level 3 heading
Gives the current headings.

2 Installing the NB Unit and Connecting Peripheral Devices

2-1-2   Installation onto the Operation Panel

Install the NB Unit by embedding it into the operation panel.
Use the metal kit and tool (a crosshead screwdriver) supplied with the Unit for installation.
Proceed the installation following the procedures below.

1 Panel cutout with dimensions is shown below. Fit the NB Unit into the panel from the front side.

Width
Opening dimensions
Height

Models	Opening Dimension (W×H mm)
NB3Q-TW00B(-V1)/TW01B(-V1)	119.0(+0.5/-0)×93.0(+0.5/-0)
NB5Q-TW00B(-V1)/TW01B(-V1)	172.4(+0.5/-0)×131.0(+0.5/-0)
NB7W-TW00B(-V1)/TW01B(-V1)	191.0(+0.5/-0)×137.0(+0.5/-0)
NB10W-TW01B(-V1)	258.0(+0.5/-0)×200.0(+0.5/-0)

2 As follows, insert panel fixators at the locations indicated by red box around the back of the NB Unit. Insert the hooks of positioners into the square holes on the Unit to hold the fixators properly, and tighten the screws firmly with the screwdriver.

NB5Q/NB7W-TW□□B(-V1)

Precautions for Safe Use

• When operating on the operation panel, make sure to keep metal particles from entering the Unit.
• The mounting panel must be between 1.6 and 4.8 mm thick. The NB Unit must be installed in a control panel.
• For the sake of waterproof and dustproof, all the fixators must be evenly tightened to a torque of 0.5~0.6 Nm. If the tightening torque exceeds the specified value, or the tightening is not even, deformation of the front panel may occur.
• Make sure that the operation panel is clean, unbent, and strong enough for the installation process.

NB-series Programmable Terminals Setup Manual(V107)   2-3

2-1 Installing the NB Unit
2
2-1-2 Installation onto the Operation Panel

This illustration is provided only as a sample and may not literally appear in this manual.

Special Information

Special information in this manual is classified as follows:

Precautions for Safe Use
Precautions on what to do and what not to do to ensure using the product safely.

Precautions for Correct Use
Precautions on what to do and what not to do to ensure proper operation and performance.

Additional Information
Additional information to increase understanding or make operation easier.

Terminology

The following terminology is used in this manual.

Terms	Descriptions
NB Unit	Indicates the main Unit of the products in the OMRON NB Series of Programmable Terminal.
NB Series	Indicates products in the OMRON NB□□ Series of Programmable Terminal. In this manual, unless otherwise specified, NB□□ Series is taken as the subject concerned.
PLC	Indicates a Programmable Controller.
CP Series	Indicates the following products in the OMRON CP Series of Programmable Controllers: CP1H, CP1L, CP1E, CP2E
CS/CJ Series	Indicates the following products in the OMRON CS/CJ Series of Programmable Controllers: CS1G, CS1H, CS1G-H, CS1H-H, CJ1G, CJ1M, CJ2M, CJ2H
NJ/NX Series	Indicates the following OMRON SYSMAC NJ/NX Series of Programmable Controllers: NJ501, NJ301, NJ101, NX102, NX1P2, NX502
C Series	Indicates the following products in the OMRON C Series of Programmable Controllers: C200HX(-Z), C200HG(-Z), C200HE(-Z), CQM1, CQM1H, CPM1A, CPM2A, CPM2C
Serial Communication Unit	Indicates a Serial Communication Unit for an OMRON SYSMAC CS/CJ-Series PLC.
Serial Communication Board	Indicates a Serial Communication Board for an OMRON SYSMAC CS/CJ-Series PLC.
Communication Board	Indicates a Communication Board for an OMRON C200HX/HG/HE(-Z) PLC.
CPU Unit	Indicates a CPU Unit in the OMRON CP, CS/CJ or SYSMAC C Series of Programmable Controllers.
NB-Designer	Indicates the OMRON NB-Designer.
Host	Indicates the PLC and other units functioning as the control devices for NB-Series Units.
PT	Indicates an OMRON Programmable Terminal.

Terms and Conditions Agreement

Warranty, Limitations of Liability

Warranties

● **Exclusive Warranty**

Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

● **Limitations**

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right.

● **Buyer Remedy**

Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Application Considerations

Suitability of Use

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Disclaimers

Performance Data

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

Safety Precautions

Notation Used for Safety Information

The following notation is used in this manual to provide precautions required to ensure safe usage of the product. The safety precautions that are provided are extremely important to safety. Always read and heed the information provided in all safety precautions.

⚠ **WARNING** | Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. Additionally, there may be severe property damage.

◈ Precautions for Safe Use
Indicates precautions on what to do and what not to do to ensure using the product safely.

🗎 Precautions for Correct Use
Indicates precautions on what to do and what not to do to ensure proper operation and performance.

Note Indicates suggestive information and precautions on operation of the product.

Symbols

The circle and slash symbol indicates operations that you must not do.

The specific operation is shown in the circle and explained in text.

This example indicates prohibiting disassembly.

The triangle symbol indicates precautions (including warnings).

The specific operation is shown in the triangle and explained in text.

This example indicates a general precaution.

The filled circle symbol indicates operations that you must do.

The specific operation is shown in the circle and explained in text.

This example shows a general precaution for something that you must do.

⚠ WARNING

Do not attempt to take the product apart and do not touch the product inside while the power is being supplied. Otherwise it may result in electric shock.

Always ensure that the personnel in charge confirm that installation, inspection, and maintenance were properly performed for the NB Unit.

"Personnel in charge" refers to individuals qualified and responsible for ensuring safety during machine design, installation, operation, maintenance, and disposal.

Ensure that installation and post-installation checks are performed by personnel in charge who possess a thorough understanding of the machinery to be installed.

Do not use the input functions of the touch switch, etc. of the NB Unit, in applications that involve human life, in applications that may result in serious injury, or for emergency stop switches.

Do not attempt to disassemble, repair, or modify the NB Unit. Otherwise it may impair the safety functions.

Never press at two or more points on the touch panel of the NB Unit at a time. Otherwise, it may activate a switch somewhere between the two points.

Security Measures

Anti-virus protection

Install the latest commercial-quality antivirus software on the computer connected to the control system and maintain to keep the software up-to-date.

Security measures to prevent unauthorized access

Take the following measures to prevent unauthorized access to our products.

- Install physical controls so that only authorized personnel can access control systems and equipment.
- Reduce connections to control systems and equipment via networks to prevent access from untrusted devices.
- Install firewalls to shut down unused communications ports and limit communications hosts and isolate control systems and equipment from the IT network.
- Use a virtual private network (VPN) for remote access to control systems and equipment.
- Adopt multifactor authentication to devices with remote access to control systems and equipment.
- Set strong passwords and change them frequently.
- Scan virus to ensure safety of USB drives or other external storages before connecting them to control systems and equipment.

Data input and output protection

Validate backups and ranges to cope with unintentional modification of input/output data to control systems and equipment.

- Checking the scope of data
- Checking validity of backups and preparing data for restore in case of falsification and abnormalities
- Safety design, such as emergency shutdown and fail-soft operation in case of data tampering and abnormalities

Data recovery

Backup data and keep the data up-to-date periodically to prepare for data loss.

When using an intranet environment through a global address, connecting to an unauthorized terminal such as a SCADA, HMI or to an unauthorized server may result in network security issues such as spoofing and tampering.

You must take sufficient measures such as restricting access to the terminal, using a terminal equipped with a secure function, and locking the installation area by yourself.

When constructing an intranet, communication failure may occur due to cable disconnection or the influence of unauthorized network equipment.

Take adequate measures, such as restricting physical access to network devices, by means such as locking the installation area.

When using a device equipped with the SD Memory Card function, there is a security risk that a third party may acquire, alter, or replace the files and data in the removable media by removing the removable media or unmounting the removable media.

Please take sufficient measures, such as restricting physical access to the Controller or taking appropriate management measures for removable media, by means of locking the installation area, entrance management, etc., by yourself.

Precaution

⚠ Caution

Wiring

In the case of the NB Series, when grounding the positive terminal of power supply of 24 V to the NB, do not ground functional grounding terminal at NB side. Some functions of a PC connected to the NB may cause a short circuit and the NB Unit may cause damage.

• Caution:
Depending on the types of PC, SG terminals of RS-232C port or USB port and contour of connector can be connected. As the contour of tool port of the NB and the functional grounding terminal are not insulated, they are connected. Therefore, connecting the PC allows GND terminal and functional grounding terminal of the NB to be connected. If the power supply of 24V to the NB is grounded positively, grounding the functional grounding terminal allows a short circuit as shown in the diagram below and may result in damage.

Do not ground the functional grounding.
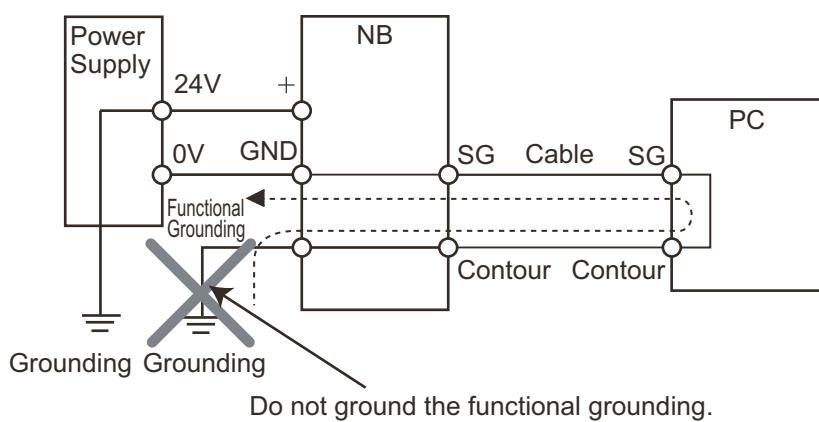

Test Function

The Test Function is performed on PC, and it has different behaviors with actual NB running system. A problem may occur due to communication timing, cable differences and unexpected PC circumstances (such as freeze). When the Test Function is performed, please consider possible unexpected circumstances on the actual NB running system and confirm that any dangerous event will not occur beforehand.

Precautions for Safe Use

- When unpacking the NB Units and the peripheral devices, check carefully for any external scratches or other damages. Also, shake the Units gently and check for any abnormal sound.
- The NB Unit must be installed in a control panel.
- The mounting panel must be between 1.6 and 4.8 mm thick. Tighten the Mounting Brackets evenly to a torque of between 0.5 and 0.6 N·m to maintain water and dust resistance. If the tightening torque exceeds the specified value, or the tightening is not even, deformation of the front panel may occur. What is more, make sure the panel is not dirty or warped and that it is strong enough to hold the Units.
- Do not let metal particles enter the Units when preparing the panel.
- Do not connect an AC power supply to the DC power terminals.
- Use a DC power with a slight voltage fluctuation and reinforced or double insulation, and that will provide a stable output even if the input is momentarily interrupted for 10 ms.
  Rated Power Supply Voltage: DC 24 V (Allowable range DC 20.4 ~ 27.6 V)
- Do not perform a dielectric voltage test.
- Before connecting the power supply to the NB unit, mount the cable on the terminal block. Make the connection by using terminal screws crimping on a twisted-pair cable with a crimping range of 12~26 AWG, and only 6.5 mm of insulation peel of the cable needs to be peeled off. Tighten the terminal screws at a torque of between 0.3 and 0.5 N·m. Make sure the screws are properly tightened. Do not use the terminal block of NB3Q-TW□□B(-V1) for other models. NB3Q-TW□□B(-V1) has different pin definitions on the terminal block.
- To prevent malfunctions caused by noise, ground the Unit correctly.
- Do not touch the packaging part of the circuit board with your bare hands. Discharge any static electricity from your body before handling the board.
- When using the No. 6 pin of the serial communication port COM1 connector for a voltage of DC+5V, make sure the supply equipment's current capacity is below 250mA before using it. The DC+5V voltage output of the NB unit is +5V±5%, and the maximum current is 250mA. (The serial communication port COM1 of NB3Q-TW□□B(-V1) is unable to output the current.)
- Turn OFF the power supply before connecting or disconnecting cables.
- Always keep the connector screws firmly tightened after the communication cable is connected.
- Do not pull on the cables or bend the cables beyond their natural limit.
  Do not place heavy objects on top of the cables or other wiring lines. Doing so may break the cables.
- Confirm the safety of the system before turning ON or OFF the power supply, or pressing the reset button.
- The whole system may stop depending on how the power supply is turned ON or OFF. Turn ON/OFF the power supply according to the specified procedure.
- Reset by pressing the reset button, or restart the power supply, once the DIP switch settings are changed.
- To ensure the system's safety, make sure to incorporate a program that can confirm the normal functionality of the NB Unit before running the system.
- Start actual system application only after sufficiently checking screen data, macros and the operation of the program at the host side.
- Do not press the touch panel with a force greater than 30 N.
- Do not use hard or pointed objects to operate or scrub the screen, otherwise, the surface of the screen may be damaged.
- Confirm the safety of the system before pressing the touch panel.
- Signals from the touch switches may not be input if the touch switches are pressed consecutively at high speed. Confirm each input before proceeding to the next one.
- Do not accidentally press the touch panel when the backlight is not lit or when the display does not appear. Make sure of the safety of the system before pressing the touch panel.
- To use numeric input functions safely, always make maximum and minimum limit settings.
- Before initializing screen data, confirm that existing data is backed up at the NB-Designer.

- When changing the password with the screen, do not reset or turn OFF the power supply until writing is finished. Failure to save the password may cause the screen to fail to function.
- When using an equipment monitor, confirm the safety of the system before carrying out the following operations:
  - Changing monitor data.
  - Changing operation mode.
  - Forced set/reset.
  - Changing the current value or the set value.
- Do not connect a USB connector to any device that is not applicable.
- When connecting the equipment with the USB HOST connector, make sure the supply equipment's current capacity is below 150mA before using it. The DC+5V voltage output of the NB Unit is +5V±5%, and the maximum current is 150mA.
- Before connecting a USB connector to a device, make sure that the device is free of damage.
- Commercially available and the recommended USB HUBs are different from the general specifications of the NB Unit. The unit may not function well in an environment subject to noise, static electricity. Therefore, when using a USB HUB, employ sufficient noise and static electricity insulation measures, or install it at a site free of noise or static electricity.
- While uploading or downloading screen data or system programs, do not perform the following operations that may corrupt the screen data or the system program:
  - Turning OFF the power supply of the NB Unit.
  - Pressing the PT's reset switch.
- Dispose of the Units and batteries according to local ordinances as they apply.

廢電池請回收

- Do not dispose the product into a fire. Doing so may cause the damage with the battery or electronic components.
- Do not apply an impact with the lithium cell, charge it, dispose it into a fire, or heat it. Doing either of them may cause an ignition or a bursting.
- When exporting products with lithium primary batteries containing perchlorate at 6ppb or above to or delivering them through California, USA, the following precautionary measures have to be publicized. Perchlorate material - applicable through special processing. Refer to http://www.dtsc.ca.gov/hazardouswaste/perchlorate.
  NB-Series products contain lithium primary batteries. When exporting products containing this kind of batteries to or delivering them through California, USA, label all the product packages as well as the appropriate delivery packages.
- Do not use benzene, paint thinner, or other volatile solvents, and do not use chemically treated cloths.
- Do not dispose the Units together with general waste at waste yards. When disposing them, follow the related local ordinances or rules.
- Cannot replace the backlight lamp inside the NB Unit.
- Deterioration over time can cause the touch points to move. Calibrate the touch panel periodically.
- Water resistance will be lost if the front sheet is torn or is peeling off. Do not use the Unit, if the front sheet is torn or is peeling off.
- The rubber packing will deteriorate, shrink, or harden depending on the operating environment. Inspect the rubber packing periodically.
- The communication cables of the COM1 and COM2 connectors are not interchangeable. Confirm the pins of the ports before carrying out communications. (NB3Q-TW☐☐B(-V1) only has COM1.)
- Periodically check the installation conditions in applications where the PT is subject to contact with oil or water.

- Do not perform the following operations during the communication of the USB memory:
  - Turning off the power supply of the NB Unit.
  - Pressing the Reset button on the NB Unit.
  - Removing the USB memory.
- Do not use the USB memory in the environment subject to strong vibration.
- Displaying a pattern for a long time, 24 hours as an indication, may cause an afterimage on the display.
  Enable [Screen Saver] in [PT Extended Property] or switch displaying screens to prevent the afterimage.

Precautions for Correct Use

- Do not install the unit in any of the following locations:
  Locations subject to severe changes in temperature
  Locations subject to temperatures or humidity outside the range specified in the specifications
  Locations subject to condensation as the result of high humidity
  Locations subject to corrosive or flammable gases
  Locations subject to strong shock or vibration
  Locations outdoors subject to direct wind and rain
  Locations subject to strong ultraviolet light
  Locations subject to dust
  Locations subject to direct sunlight
  Locations subject to splashing oil or chemicals

- Take appropriate and sufficient countermeasures when installing systems in the following locations:
  Locations subject to static electricity or other forms of noise
  Locations subject to strong electric field or magnetic field
  Locations close to power supply lines
  Locations subject to possible exposure to radioactivity

- Precautions for software:
  The update, restoration, uninstall and reinstallation of software in running status is prohibited in order to guarantee the correct use of the product.

Conformance to EC Directives

NB-Series Programmable Terminals are EMC compliant.

Concepts

OMRON products are electronic devices that are incorporated in machines and manufacturing installations. OMRON PTs conform to the related EMC Directives (see note) so that the devices and machines into which they are built can more easily conform to EMC Directives. The actual products have been through inspections and are completely in accordance with EMC directives. However, when they are built into customers' systems, whether the systems also comply with these Directives is up to the customers for further inspection.

EMC-related performance of OMRON PTs will vary depending on the configuration, wiring, and other conditions of the OMRON equipment or control panel. The customer must, therefore, perform final checks to confirm that the overall machine or device conforms to EMC standards.

Note The applicable EMC (Electromagnetic Compatibility) standards are as follows:
EMS (Electromagnetic sensitivity): EN61131-2: 2007
EMI (Electromagnetic Interference): EN61131-2: 2007

Conformance to EC Directives

NB-Series Programmable Terminals are EC compliant. Heed the following precautions in order to ensure that the customer's overall machine and device conform to EC Directives.

1 The PT must be installed in a control panel.

2 You must use reinforced insulation or double insulation for the DC power supply and the DC power supply must have minimal voltage fluctuations and provide a stable output even if the power supply input is interrupted for 10 ms.

3 The PTs conform to the standard EN 61131-2, but radiated emission characteristics (10m regulations) may vary depending on the configuration of the control panel used, other devices connected to the control panel, wiring, and other conditions. You must therefore confirm that the overall machine or equipment complies with EC Directives.

4 This is a Class A product (Product for industry purpose). It may cause radio interference in residential areas, in which case the user may be required to take adequate measures to reduce interference.

Conformance to KC Standards

Observe the following precaution if you use NB-series Programmable Terminals in Korea.

A 급 기기 (업무용 방송통신기자재)
이 기기는 업무용(A 급) 전자파적합기기로서 판매자
또는 사용자는 이 점을 주의하시기 바라며, 가정외의
지역에서 사용하는 것을 목적으로 합니다.

Class A Device (Broadcasting Communications Device for Office Use)

This device obtained EMC registration for office use (Class A), and it is intended to be used in places other than homes.

Sellers and/or users need to take note of this.

1-2 Definition and Description of Serial Port COM

● **Serial Port COM1**

• NB5Q/NB7W/NB10W-TW☐☐B(-V1)

Serial port COM1 is a 9-pin D-type socket port. This port supports RS-232C communication function, making it connectable to a controller which features RS-232C function, and it can also be used for downloading programs or debugging for the product.
The pins are defined as follows:

NB5Q/NB7W/NB10W-TW☐☐B(-V1)	
Pins	**COM1 Signals**
1	NC
2	SD
3	RD
4	RS(RTS)*
5	CS(CTS)*
6	DC+5V
7	NC
8	NC
9	SG

* Pin 4 and 5 are not used, thus not compliant with RS or CS function.

Precautions for Safe Use

When using the No. 6 pin of the serial communications port COM1 connector for a voltage of DC+5V, make sure the supply equipment's current capacity is below 250 mA before using it. The DC+5V voltage output of the NB Unit is +5V±5%, and the maximum current is 250 mA.

- NB3Q-TW☐☐B(-V1)

NB3Q-TW☐☐B(-V1) has only 1 serial port COM1, and this port supports communication (non-isolated) based on RS-232C, RS-422 and RS-485, of which only 1 connection mode can be applied at one time. By means of the RS-232C mode (PIN 2~5), it can be connected to a controller based on RS-232C, and can also be used for downloading programs, as well as debugging for the product (connected to a PC). While with the RS-422 or the RS-485 mode (PIN 1, PIN 6~8), only a PLC can be connected.

The pins are defined as follows:

Pins	Signals	I/O	Functions		
			RS-232C	**RS-485**	**RS-422A**
1	SDB+	I/O	-	-	Sending data(+)
2	SD	O	Sending data	-	-
3	RD	I	Receiving data	-	-
4	RS(RTS)	O	Request to send*	-	-
5	CS(CTS)	I	Clear to send*	-	-
6	RDB+	I/O	-	RS485B Send/Receive data(+)	Receiving data(+)
7	SDA-	I/O	-	-	Sending data(-)
8	RDA-	I/O	-	RS485A Send/Receive data(-)	Receiving data(-)
9	SG	-	Signal ground		

* Pin 4 and 5 are not used, thus not compliant with RS or CS function.

● **Precaution for Cable Fabrication**

The COM 2 ports included in this manual and marked by cable manufacturers are intended for the PT of NB5Q/NB7W/NB10W-TW☐☐B(-V1) models, therefore when communication connection is carried out with the COM 1 port of NB3Q-TW☐☐B(-V1), please refer to the pin definitions in this section prior to connection.

● **Serial Port COM2**

- NB5Q/NB7W/NB10W-TW☐☐B(-V1)

Serial port COM2 is a 9-pin D-type socket port. This port supports RS-232C/RS-485/RS-422A communication function.
The pins are defined as follows:

Pins	Signals	I/O	Functions		
			RS-232C	**RS-485**	**RS-422A**
1	SDB+	I/O	-	-	Sending data(+)
2	SD	O	Sending data	-	-
3	RD	I	Receiving data	-	-
4	Terminal R1	-	-	Terminal resistor	
5	Terminal R2	-	-	Terminal resistor	
6	RDB+	I/O	-	Send/Receive data(+)	Receiving data(+)
7	SDA-	I/O	-	-	Sending data(-)
8	RDA-	I/O	-	Send/Receive data(-)	Receiving data(-)
9	SG	-	Signal ground		

2

Connecting to SIEMENS PLCs

This section describes the connection to SIEMENS PLCs.
NB□□-TW□□B and NB□□-TW□□B-V1 support different PLC models, please refer to *Section 1* for details.

2-1   Serial Port and Ethernet

2-1-1   Serial Port

Series	CPU	Link Module	Driver
S7-200	CPU212 CPU214 CPU215 CPU216 CPU221 CPU222 CPU224 CPU226 CPU224 XP CN CPU226 XP CN	RS485 on the CPU unit	SIEMENS S7-200
S7-300	CPU312IFM CPU313 CPU313C CPU314 CPU314IFM CPU315 CPU315-2 DP CPU316 CPU316-2 DP CPU318-2	MPI port on the CPU unit	SIEMENS S7-300/400 (PC Adapter Direct)

2-3   Communication Parameter Setting

2-3-1   When Using SIEMENS S7-200 Communication Protocol

PT Settings

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), 1 (Stop Bit), even(Parity Check) and 2 (PLC Station No.)

Note The maximum communication baud rate is 187.5K that is not supported by the direct online.
The PLC No. should match with the PLC No. in PT. Because the PLC address of S7-200 ranges from 1 to 126, so the PLC No. in PT should also range from 1 to 126.

RS485 Communication

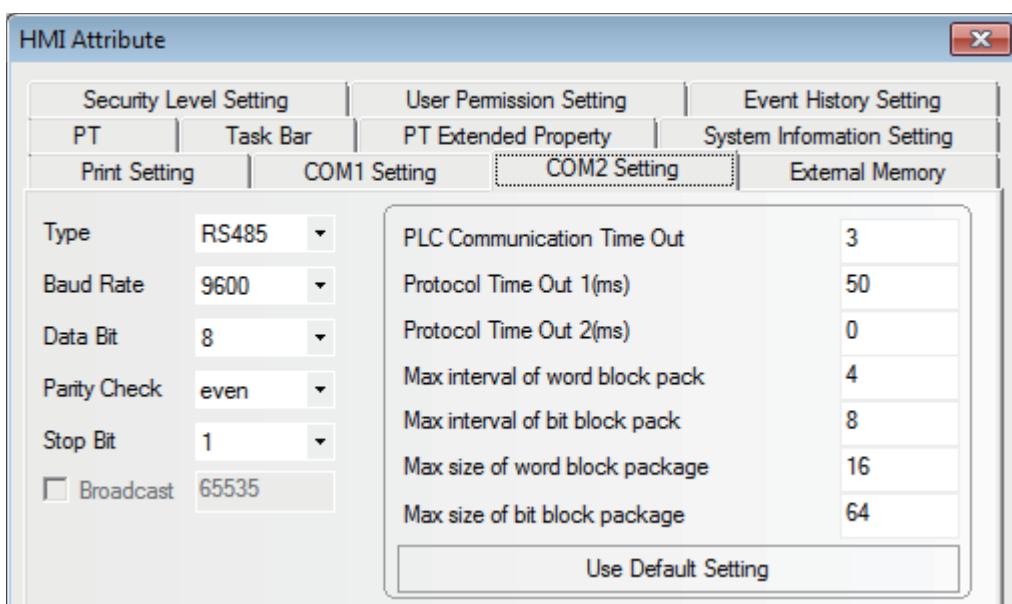

RS232 Communication
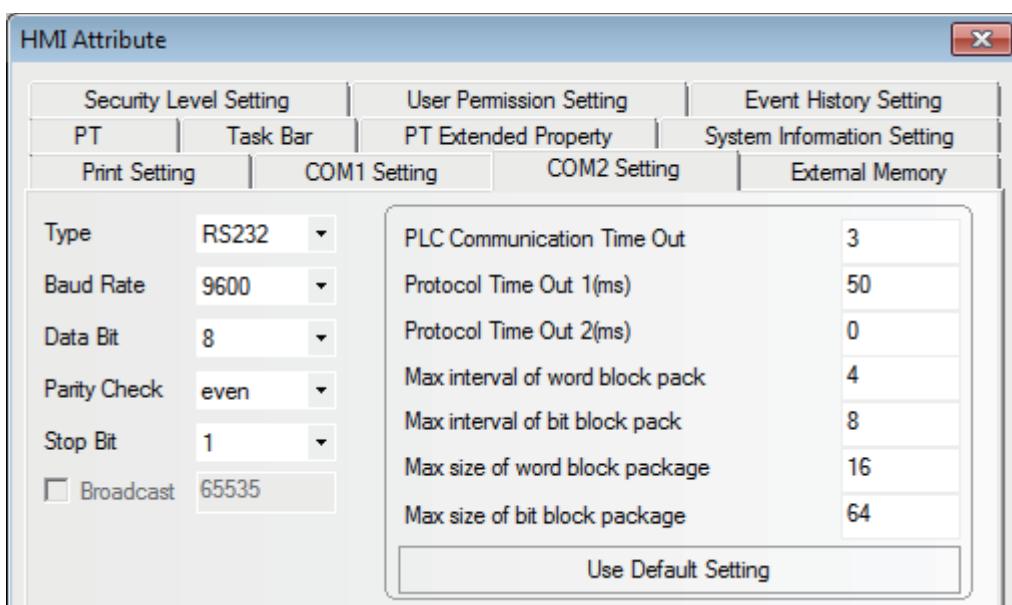

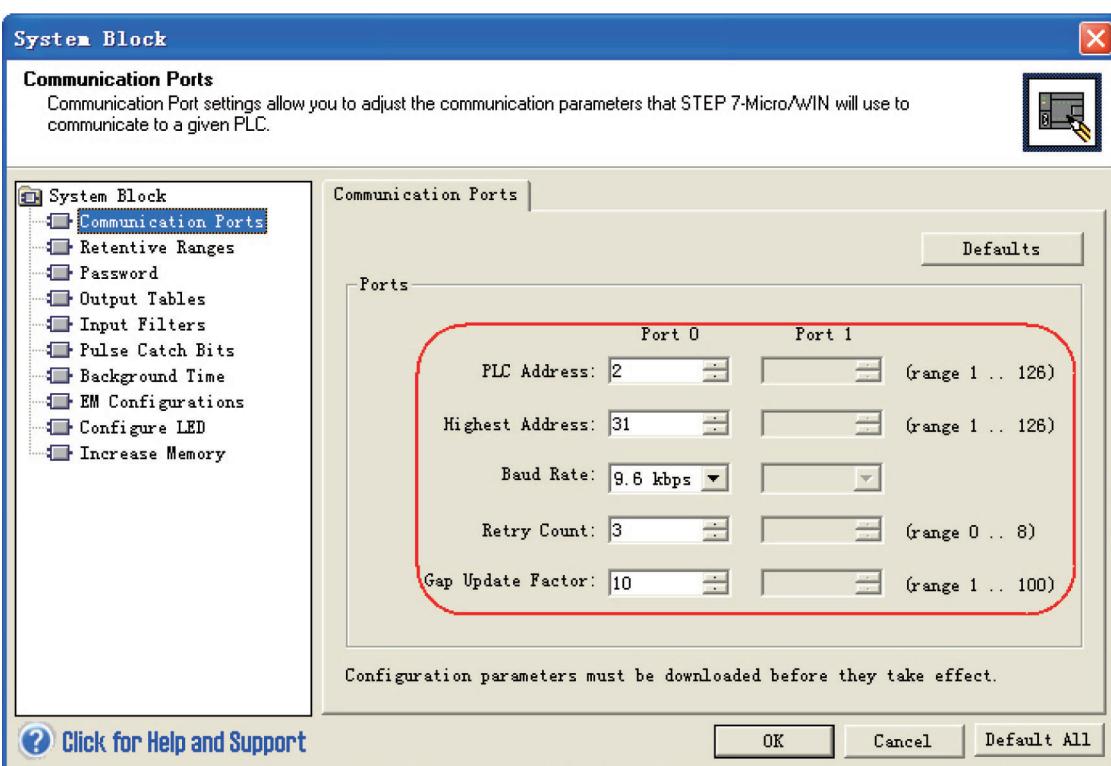

PLC Settings

2-3-2   When Using SIEMENS S7-300/400 (PC Adapter Direct) Communication Protocol

PT Settings

PT default communication parameters: 19200bps(Baud Rate), 8(Data Bit), 2(Stop Bit), odd (Parity Check) and 2 (PLC Station No.) (Multiple Station No. is not supported.)

RS232 Communication
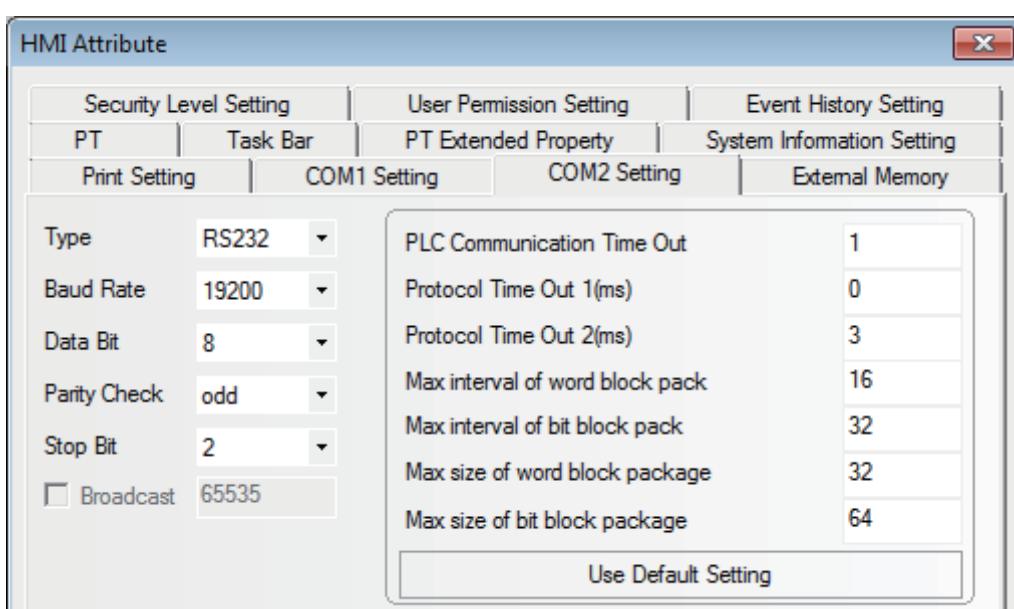

Note 1   The PLC Station No. is not needed if the PC adapter is used, which realize one for one communication.

2   When MPI-Adapter SSW7, RS232 (Order No.700-751-1VK21) manufactured by Helmholz is used, set the communication speed as follows. Also the firmware of the MPI-Adapter should be V3.4b7 or later.

• PLC communication speed: 19.2/187.5 kbps

• PT communication speed: 9600/14400/19200/38400/56000/57600/115200 bps

3   DB blocks should be established in PLC program configuration, otherwise the relevant registers (DB.DBX, DB.DBW, DB.DBD) can not be written. The even parity should be used on the initial addresses of DBm.DBW and DBm.DBD.

Note   For information of the product manufactured by Helmholz, please access to website as follows.
Systeme Helmholz GmbH
 http://www.helmholz.de/
If the firmware version of the purchased MPI-Adapter is old, please download SHTools from website as above to update the firmware.

PLC Settings

**1**   When MPI-Adapter manufactured by Helmholz is used, set the communication speed of PLC to 19.2 Kbps or 187.5 Kbps.

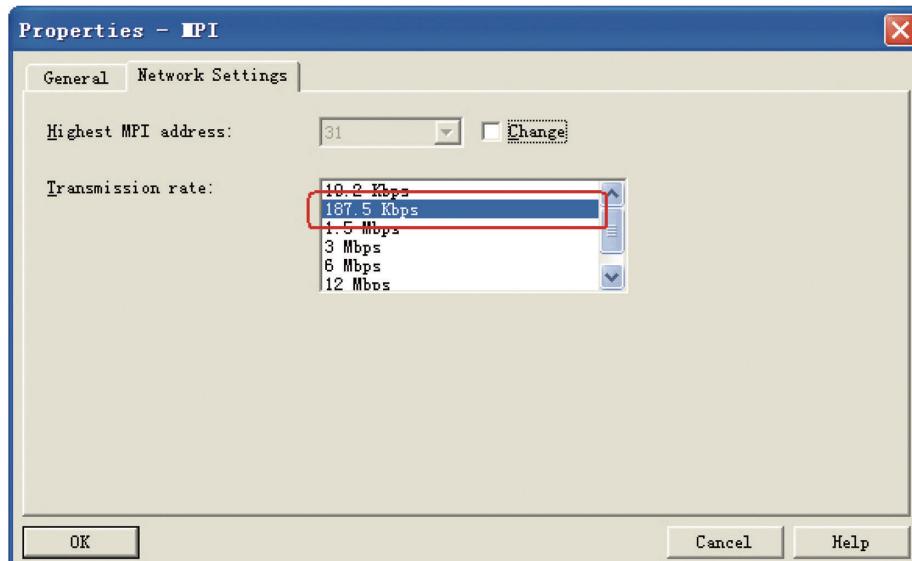

2   The MPI address must be 2.
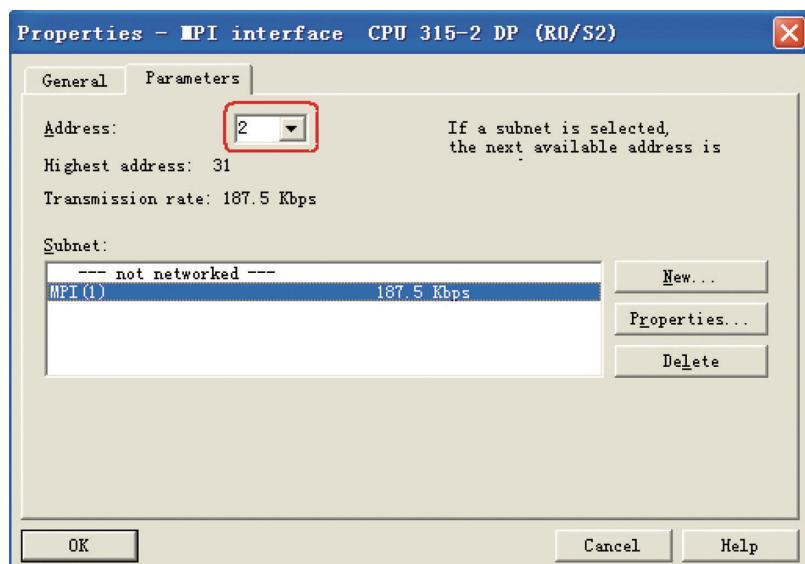

3   Download the set parameters to PLC after the setting is completed. Then open [SIMATIC Manager] menu-[Option]-[PG/PC Interface Setting], select PC Adapter (MPI) and modify the transmission rate of MPI port to be 187.5K, as shown below:
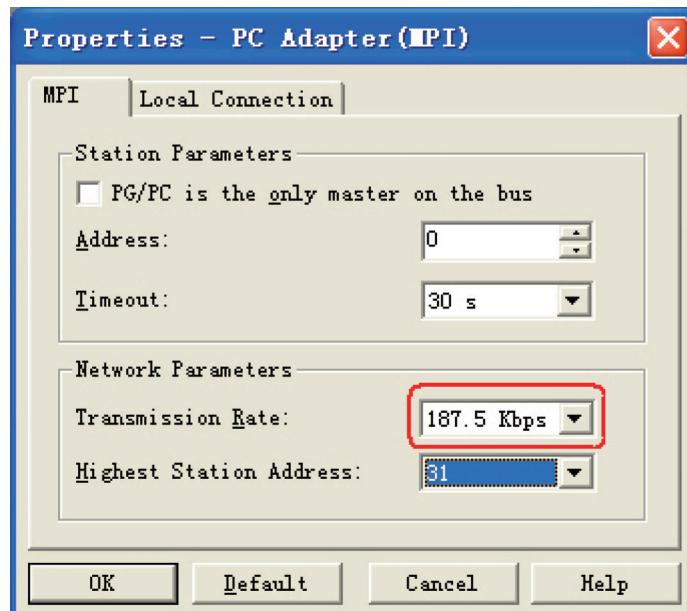

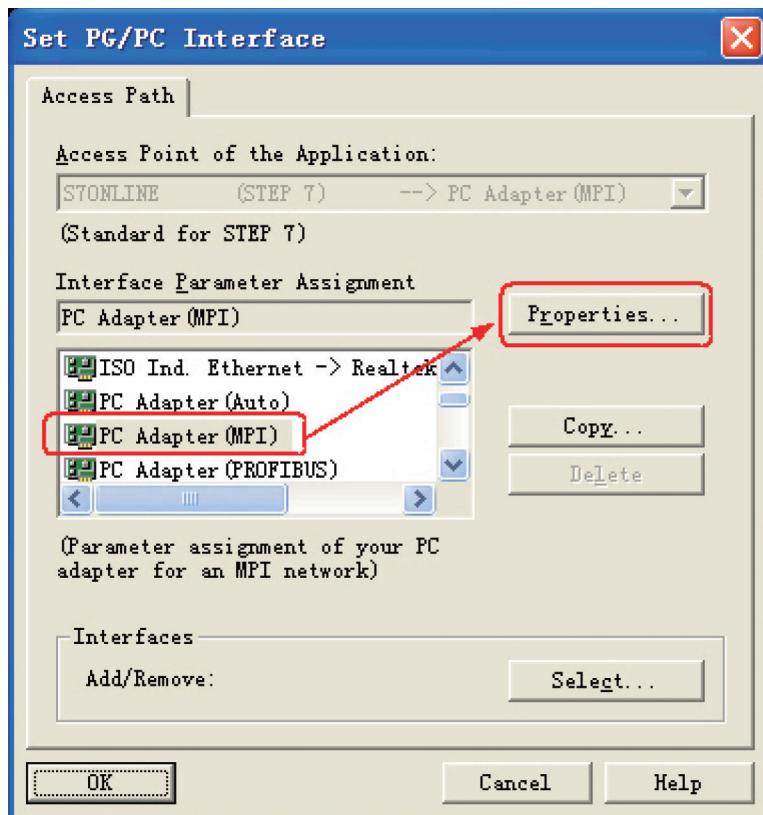

2-3-3   SIEMENS S7-200 (SMART) Ethernet (TCP Slave)
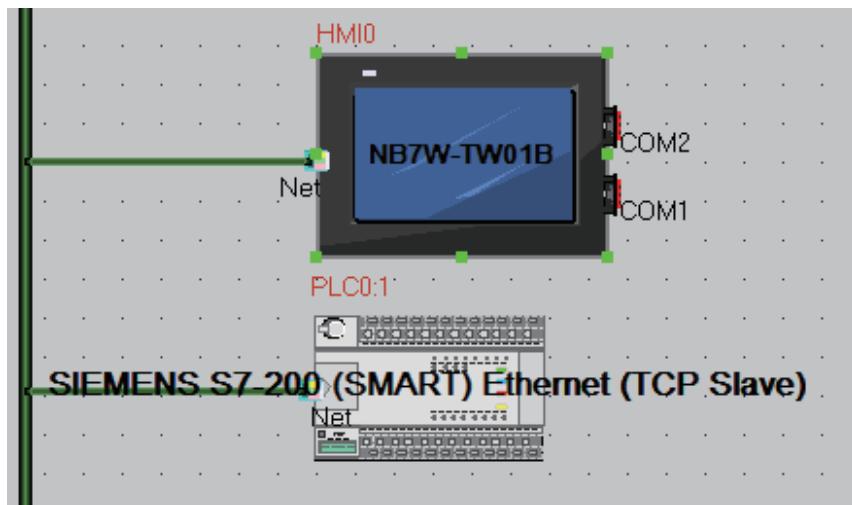

PT Settings

Note When you use S7-200 SMART, observe the following setting.
Set the [PLC property] - [Protocol Time Out 2] to "20".
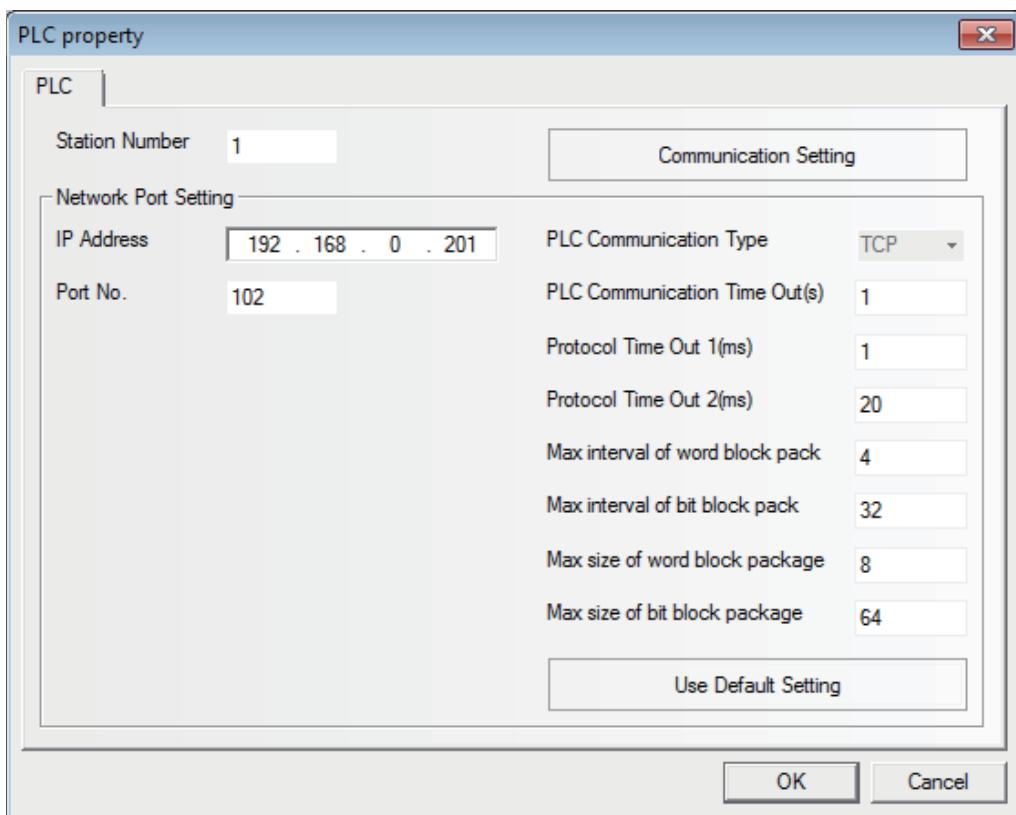

PLC Settings

● Using Ethernet Port of CPU Unit

When you use the Unit that uses built-in Ethernet Port, set the Unit with STEP7-MICRO/WIN Smart.

1   Double-click the [Communications].
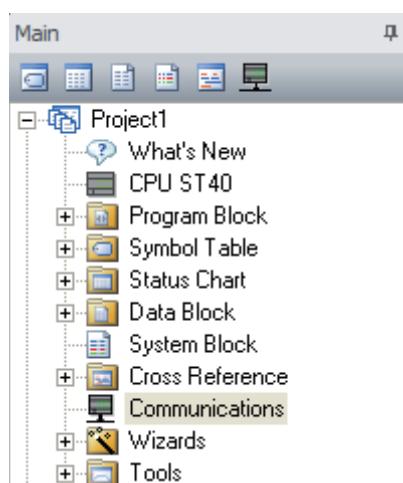

2   Connect the PLC to be connected on the Ethernet Network that is connectable with PC and click the [Find CPUs].
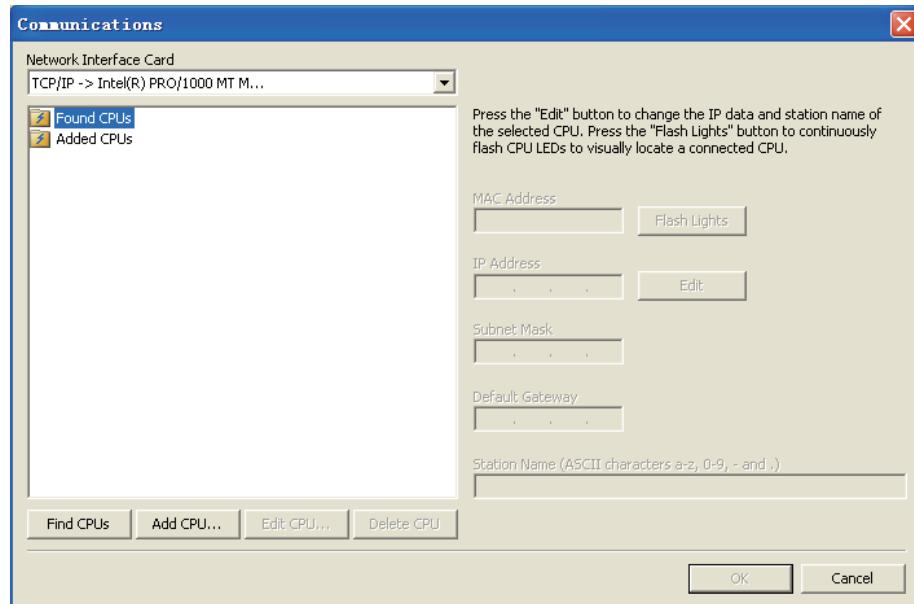

3   Select the found CPU and click the [Edit] button.
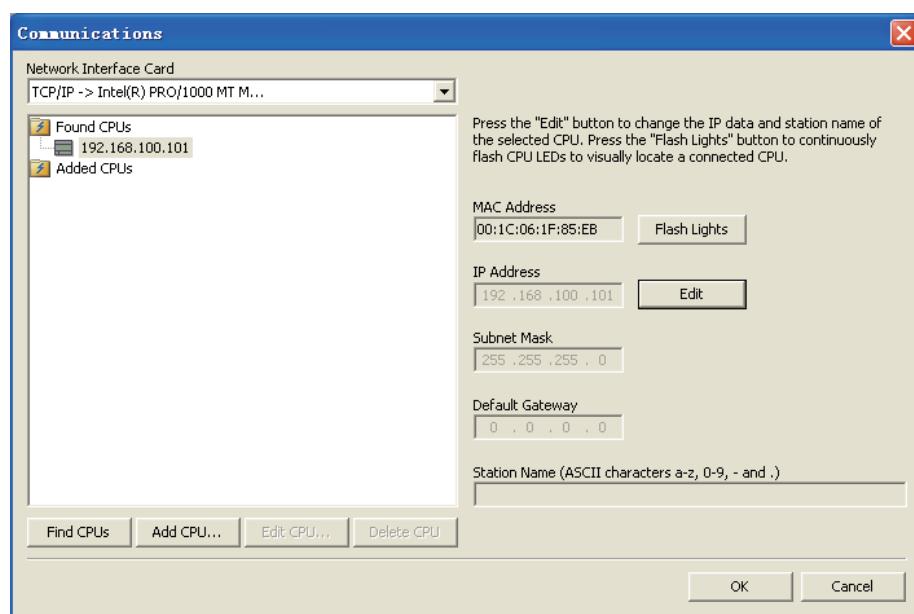

4   Set IP address and others and click the [Set] button.
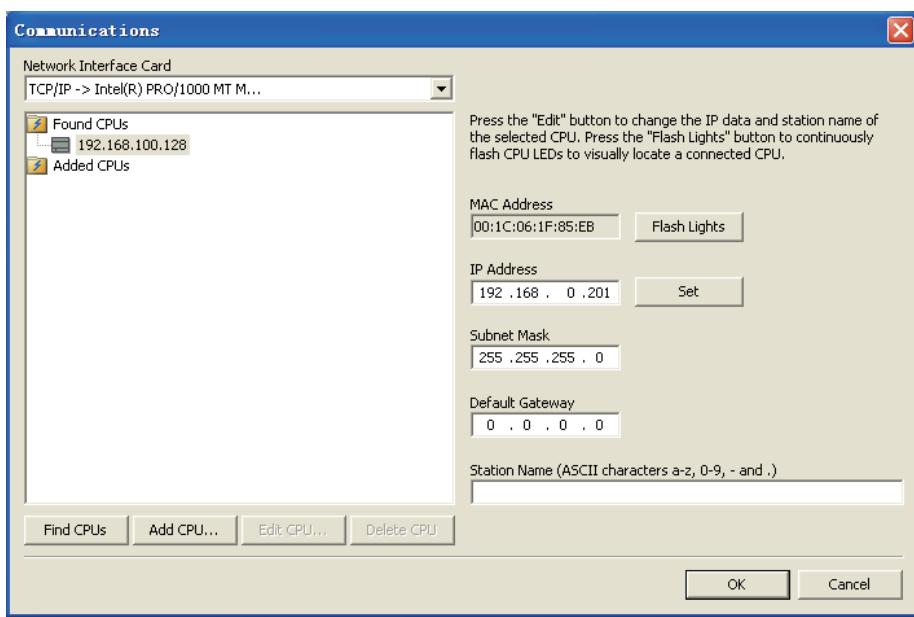

● **Using communication module**

When you use communication module, make settings with STEP7 Micro/Win.

1   Select the [Tools] - [Ethernet Wizard...] from Menu.
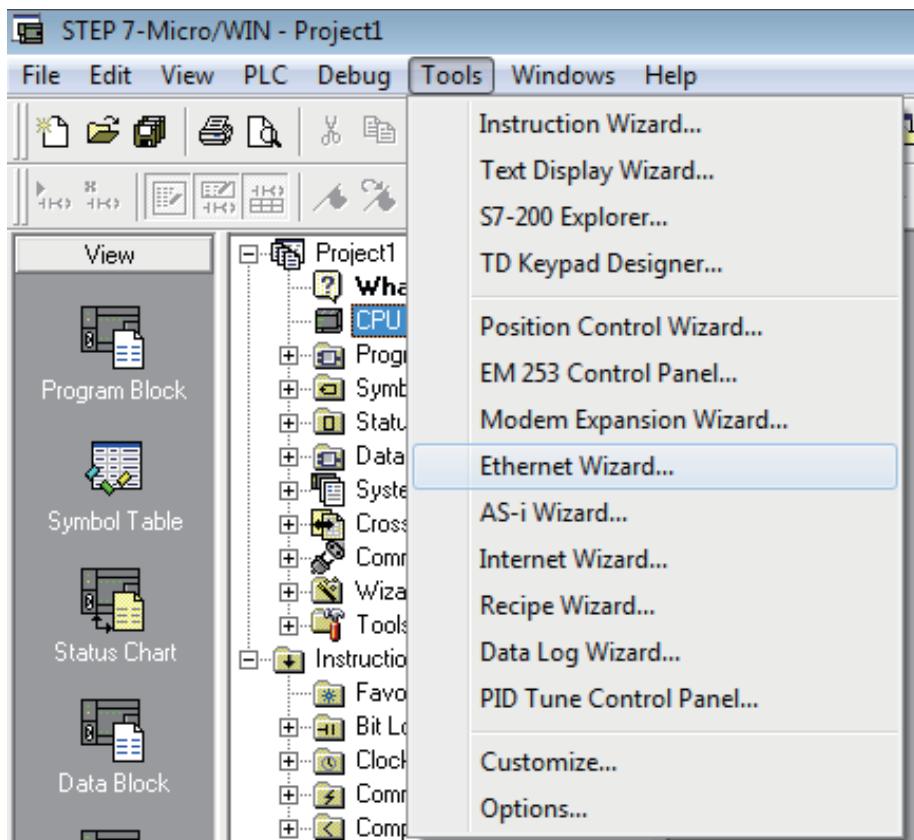

2   Click the [Next>] button.
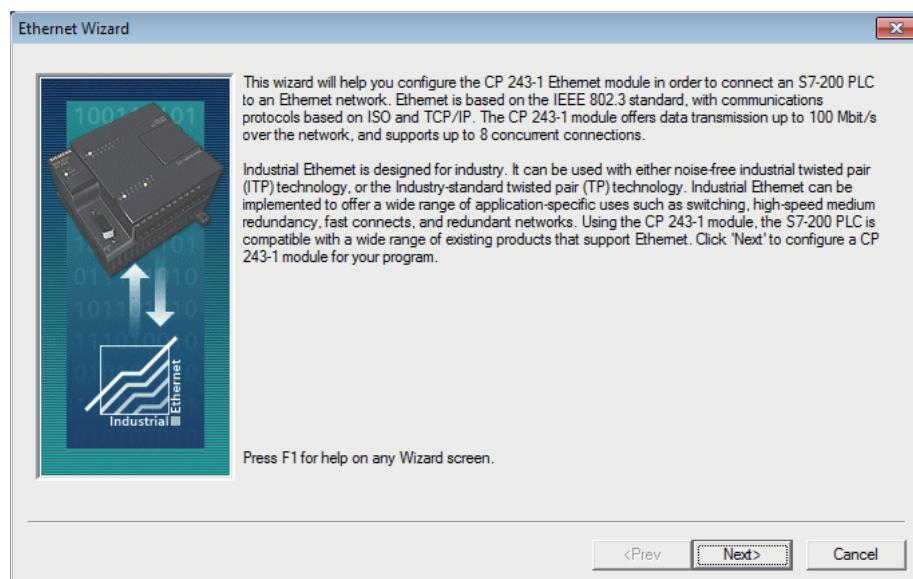

3   Set the Module Position to "0" and click the [Next>] button.
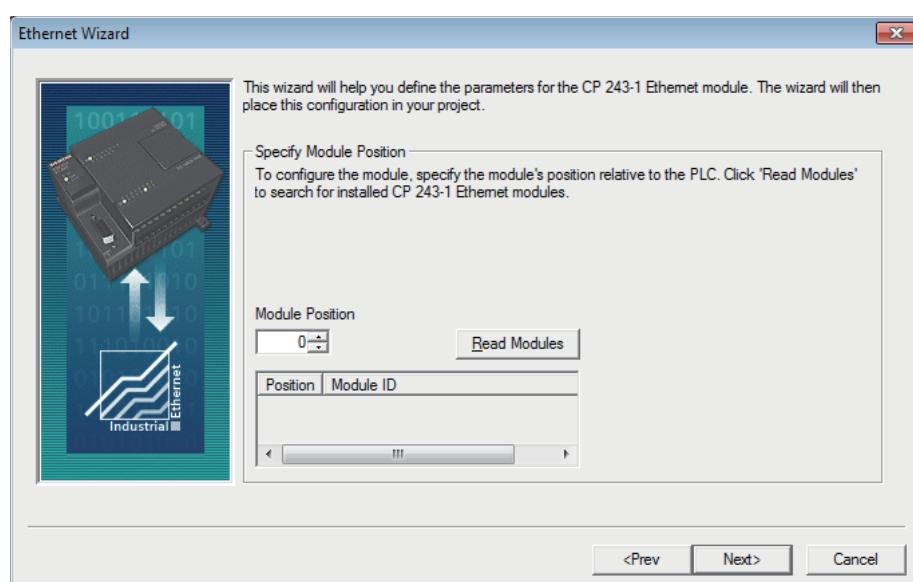

📝 **Precautions for Correct Use**

In order to communicate with the NB, the Module Position must be "0". If yours not the case, change the CPU configurations and set the Module Position to "0".

4 Make settings of IP address and others and select the [Auto Detect Communications] for the [Module Connection Type].
When completing the settings, click the [Next>] button.
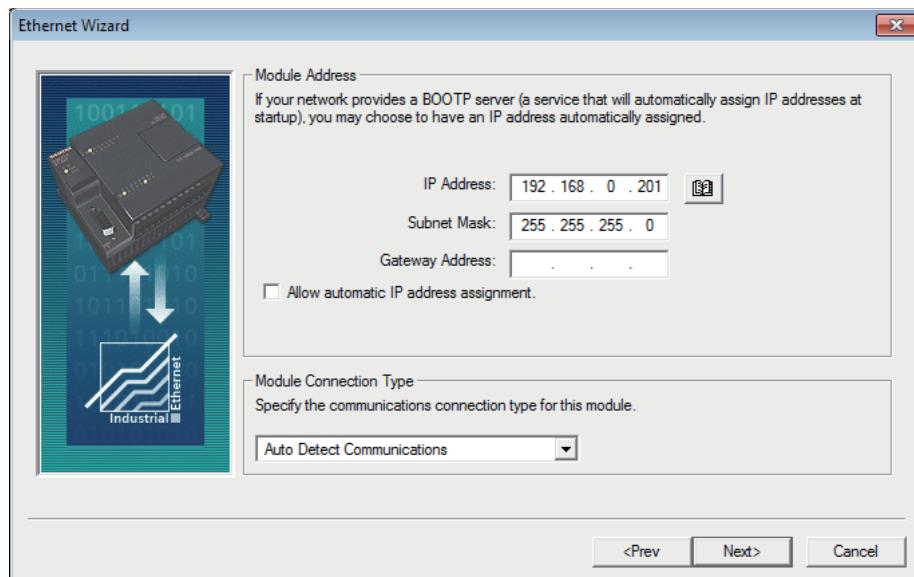

5 Make settings as below and click the [Next>] button.
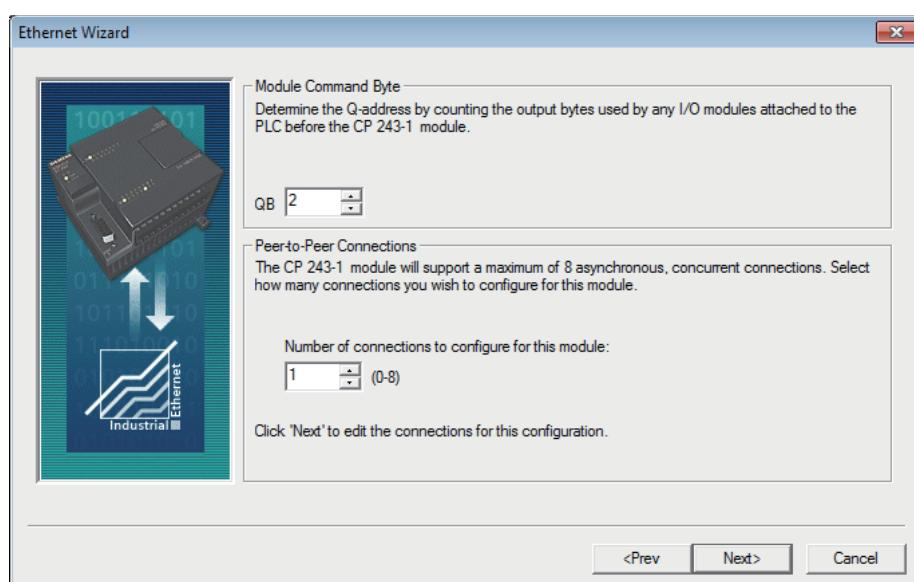

6   Make settings as below and click the [OK] button.
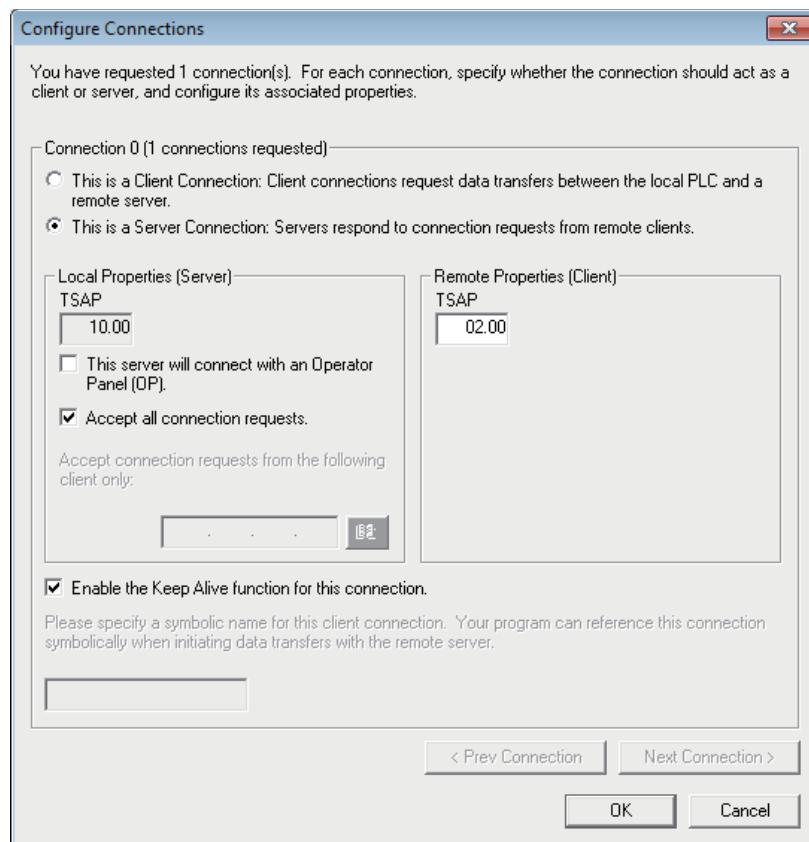

7   Make settings as below and click the [Next>] button.
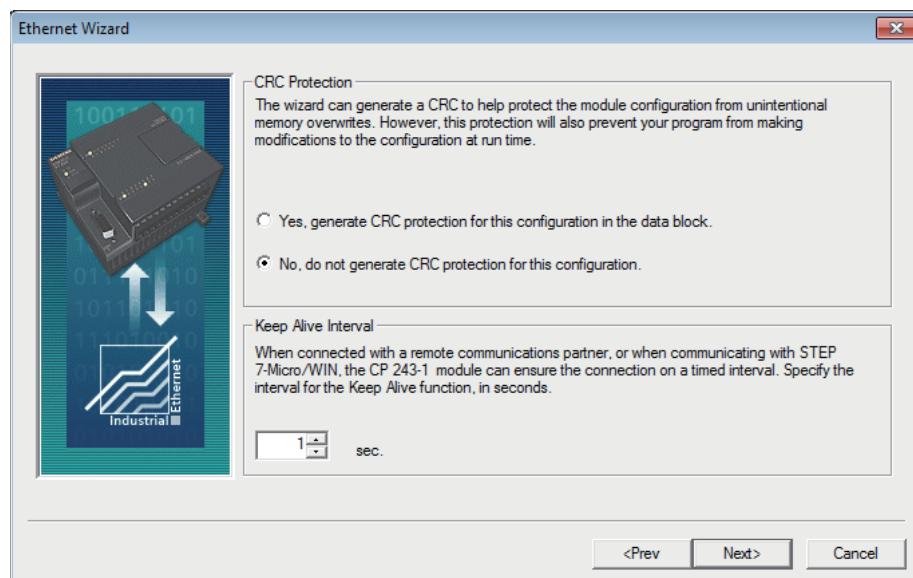

8 Click the [Suggest Address] button and then the [Next>] button.
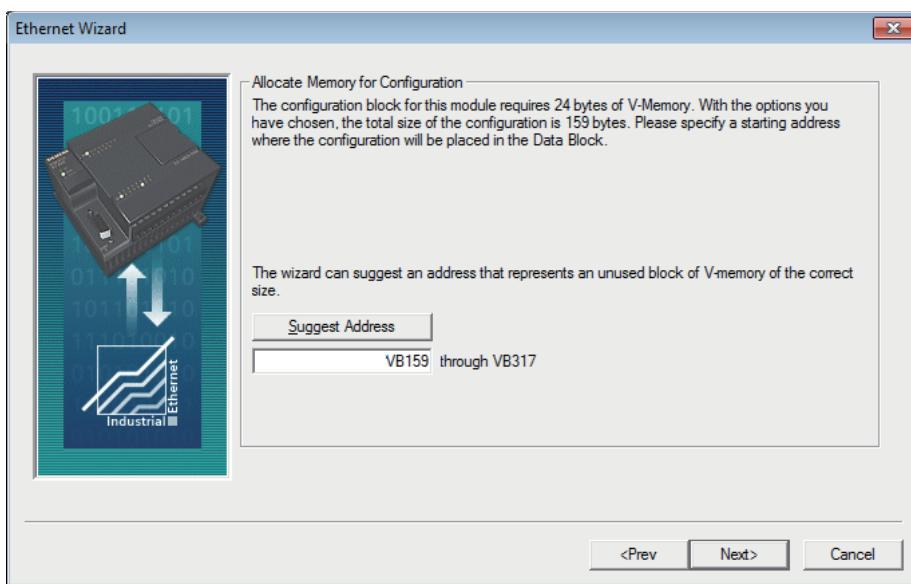

9 Click the [Finish] button.
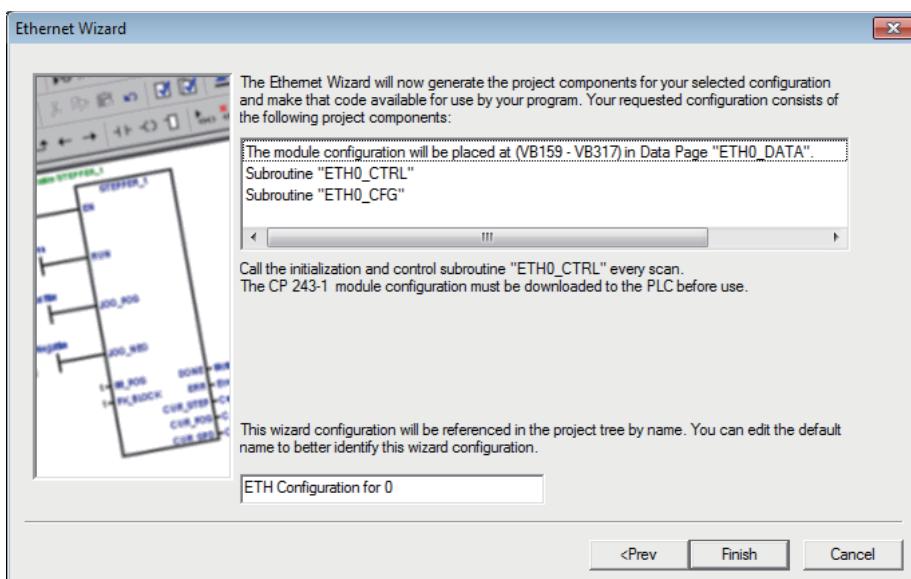

10 Click the [Yes] button.
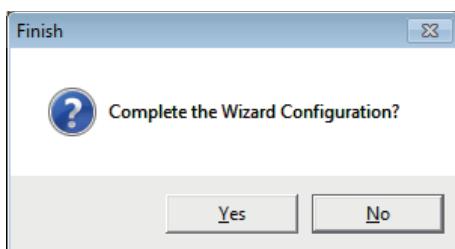

11 Correct your program to call the subroutine ETH0_CTRL for each cycle.
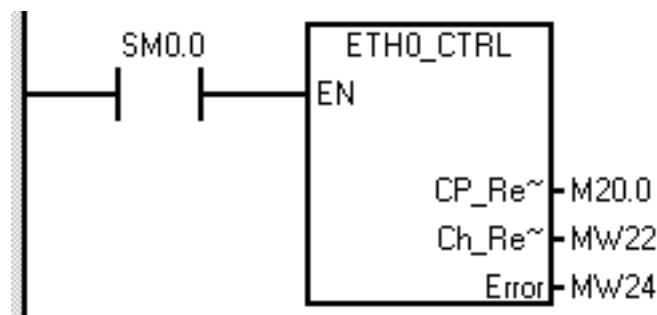

2-3-4 SIEMENS S7-300 Ethernet (TCP Slave)
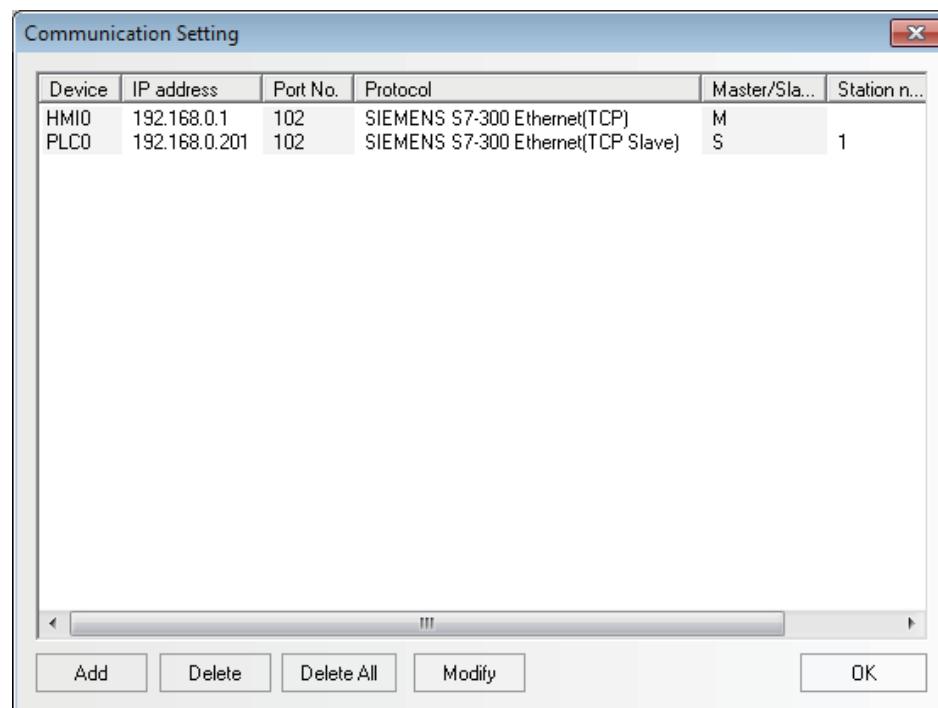

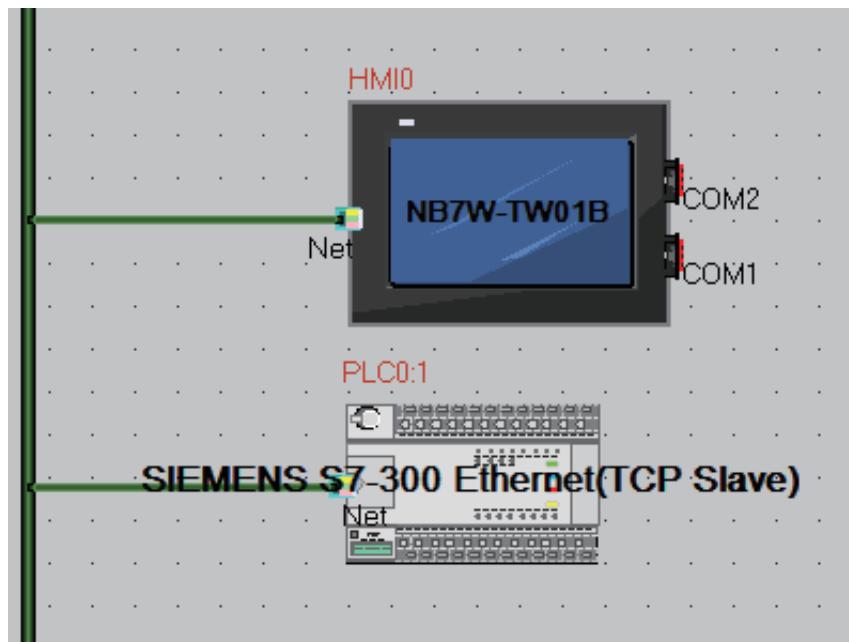

PT Settings

PLC Settings

● Using Ethernet Port of CPU Unit

Make settings with SIMATIC STEP 7 (TIA Portal).

1 Double-click the [General] tab - [PROFINET interface [X3]] - [Ethernet addresses] and set IP address and others.
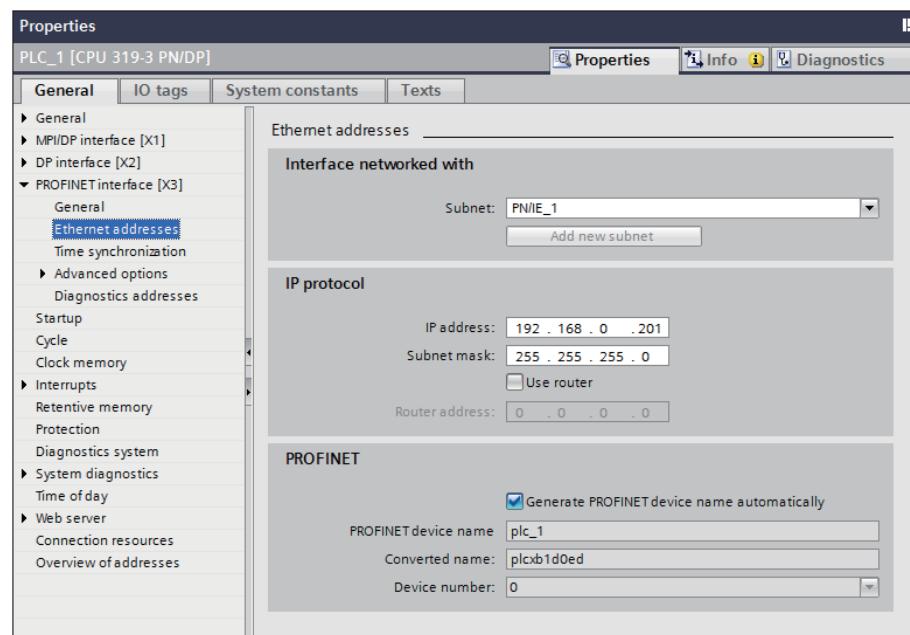

2 Transfer the set descriptions to the PLC. If you transfer the descriptions for the first time, select the [Extended download to device] and check the [Show All compatible devices] check box.
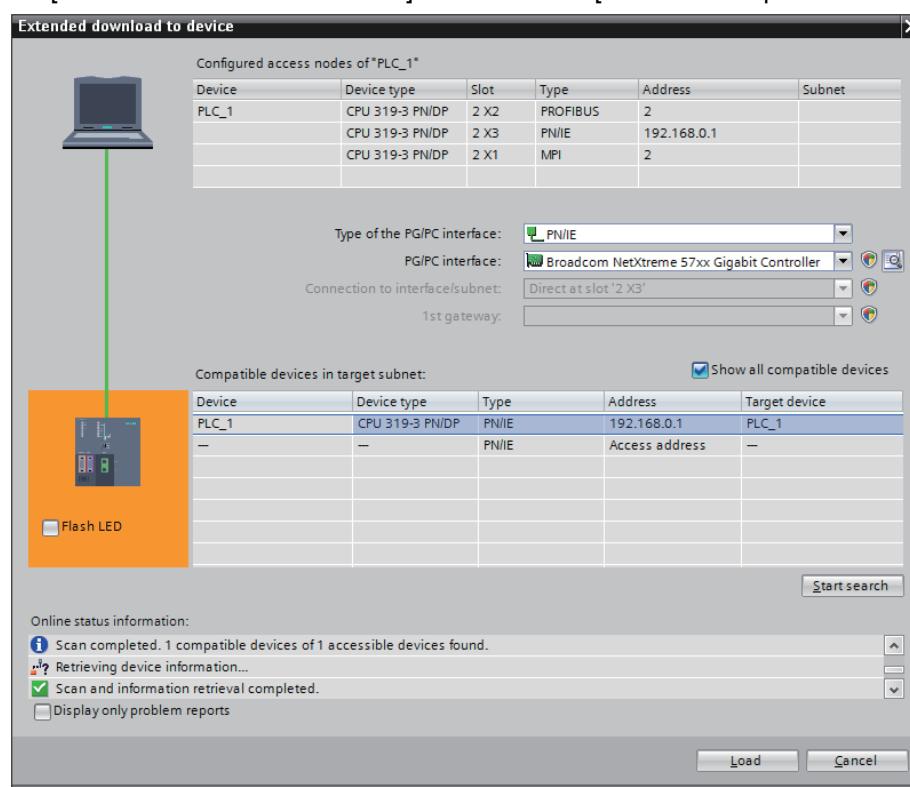

3   Create a Data block.

Double-click the [Project tree] - [Add new block].
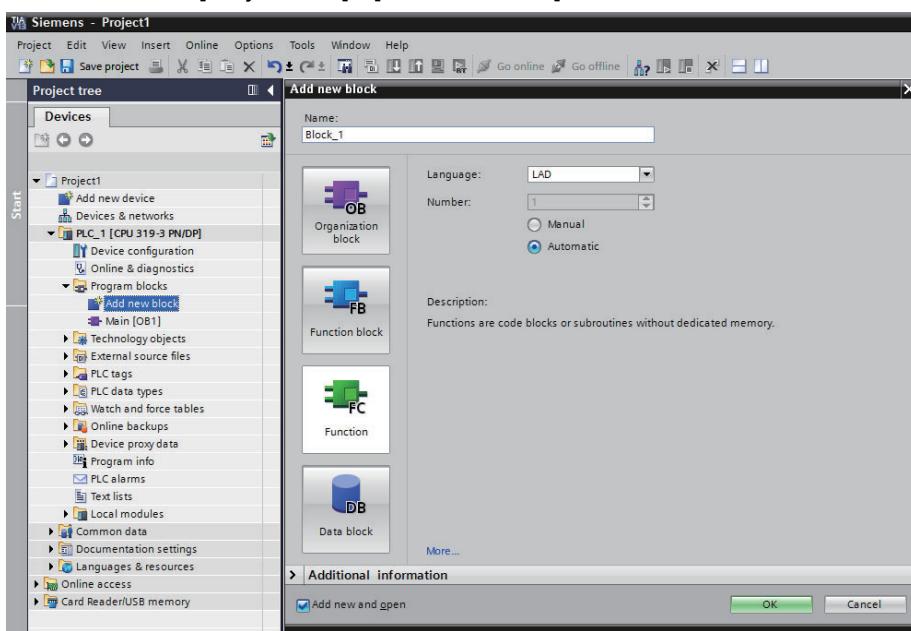

4   Click the Data Block.

Example: If you create a new Data block DB10, make settings as below.
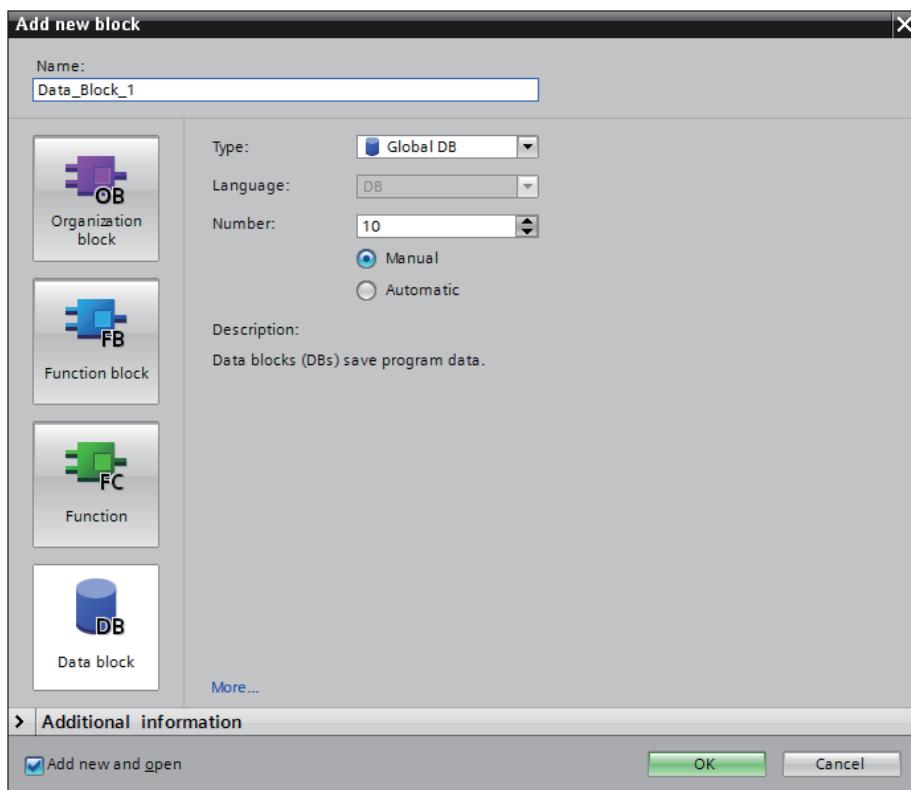

📝 **Additional Information**

- If you use the Data block, the data type of the NB and the PLC should be the same. For instance, if the Data type of the PLC is REAL, the storing data type of the numeric input component should be Float.
- When you define the Data block, secure the larger area than the one used for the NB. For instance, in order to use DB5.DBW32 in the NB, you need to secure DB5.DBW34 or later for the PLC.
- If you use the data block, do not check the check box, [Properties] - [Attributes] - [Only store in load memory].

● **Using communication module**

Make settings with SIMATIC STEP 7 (TIA Portal).

1 Open the [Device overview] and click the [PLC].

🚩	...	Module	Rack	Slot	I address	Q address	Type	Order no.
			0	1				
		▼ PLC_1	0	2			CPU 315-2 DP	6ES7 315-2AH14-0AB
		MPI interface_1	0	2 X1			MPI interface	
		DP interface_1	0	2 X2	2047*		DP interface	
			0	3				
			0	4				
			0	5				
			0	6				
			0	7				
			0	8				
			0	9				
			0	10				
			0	11				

2 Click the [General] tab - [MPI address]. Set the [Parameters] - [Address] to "2".
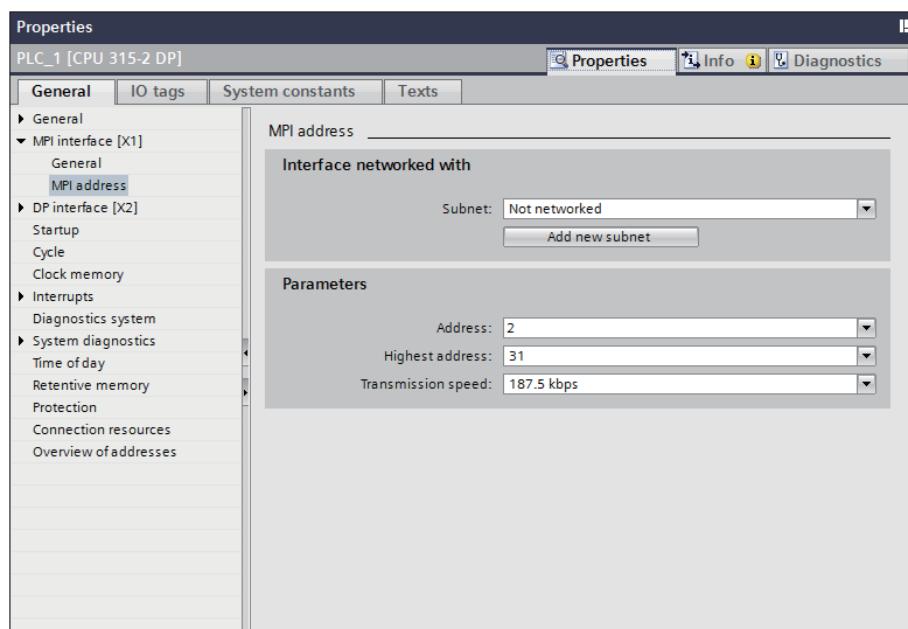

3   Select the Model from [CP 343-1] - [Hardware catalog] and double-click on the Model.
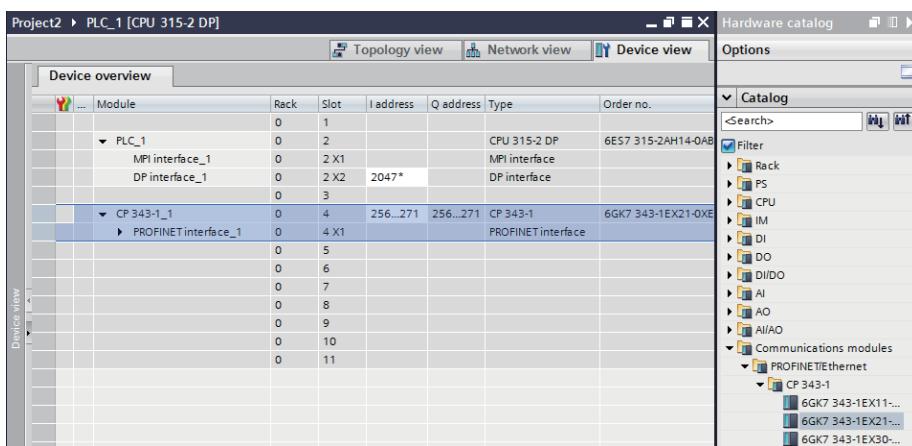

4   Click the [General] tab - [MPI address]. Set the [Connection to backplane bus] - [Address] to "3".
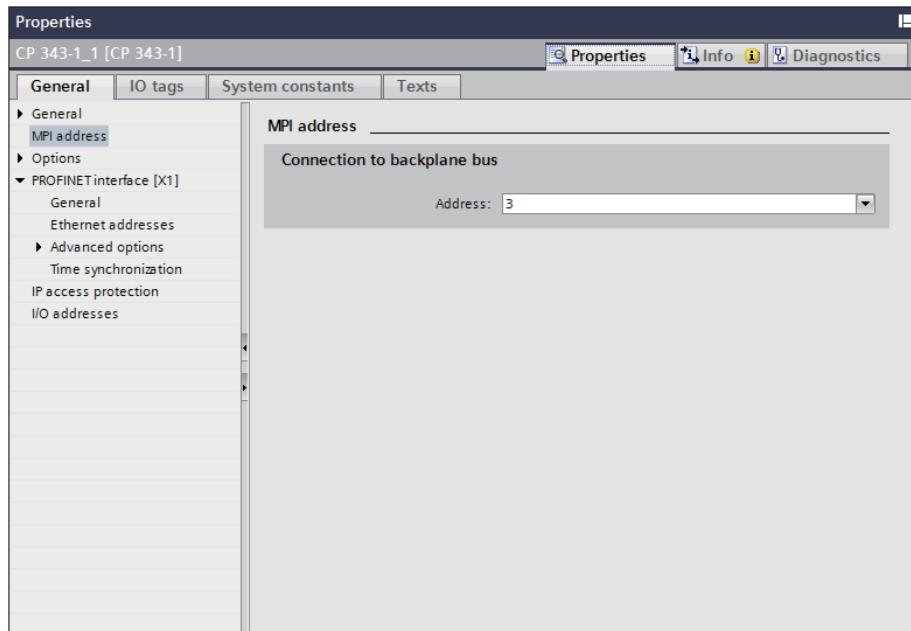

5   Click the [General] tab - [Ethernet addresses]. Make settings IP address and others.
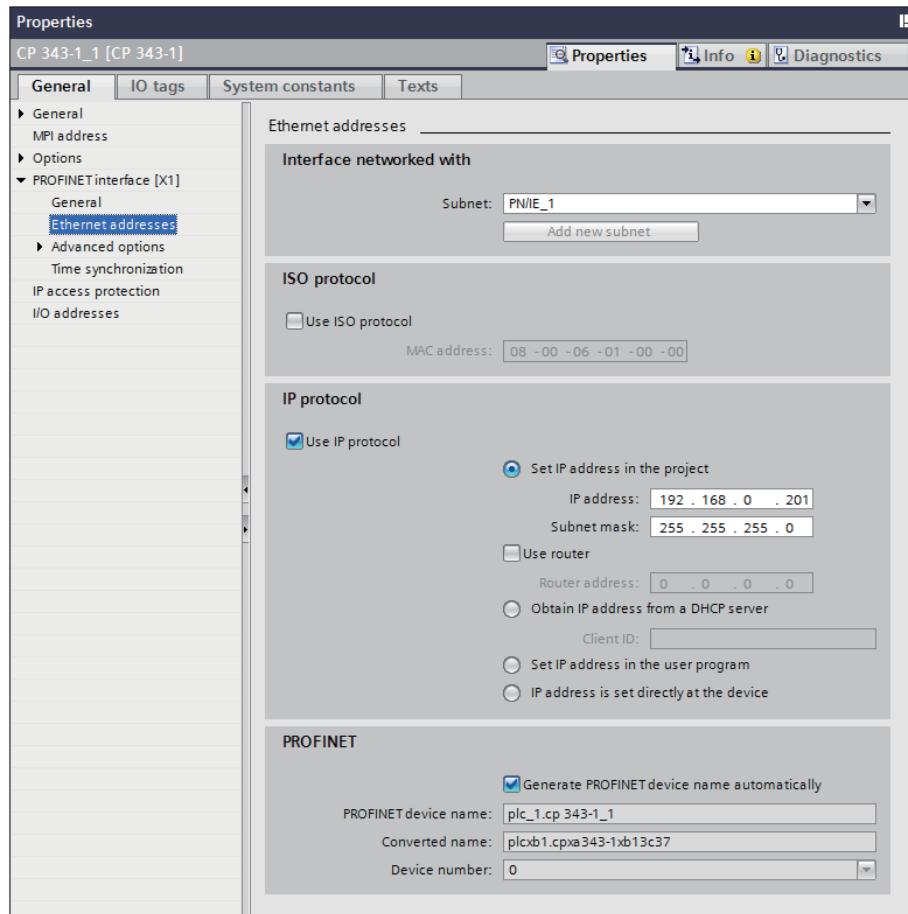

6   Download the settings to the PLC.

2-3-5   SIEMENS S7-1200 Ethernet (TCP Slave)

▌ PT Settings

PLC Settings

Make settings of the PLC using SIMATIC STEP 7 (TIA Portal).

1   Double-click the [General] tab - [PROFINET interface] - [Ethernet addresses] and set IP address and others.
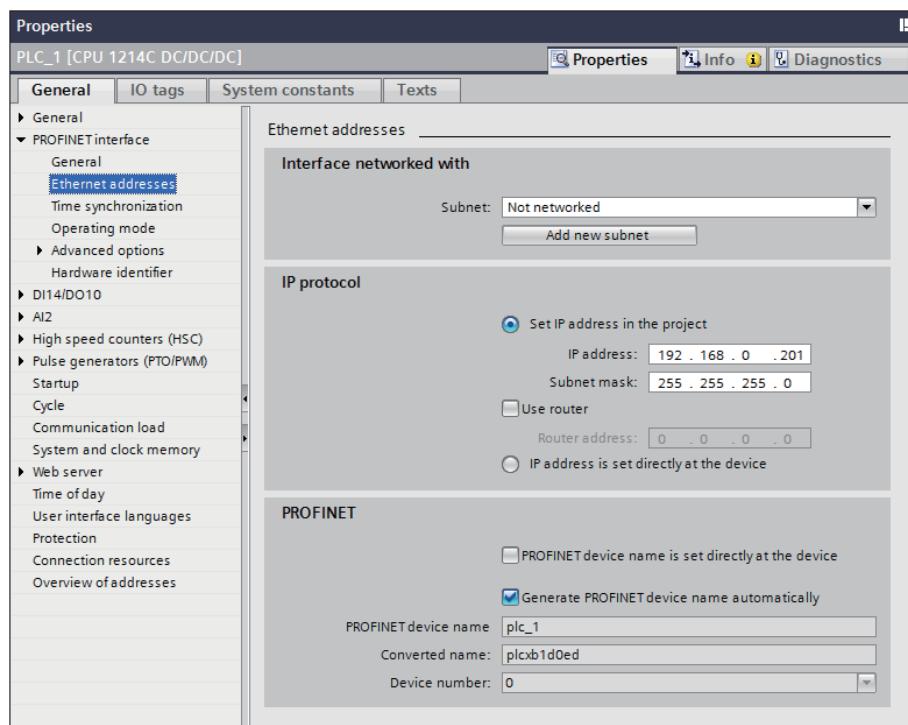

2   Transfer the set descriptions to the PLC. If you transfer the descriptions for the first time, select the [Extended download to device] and check the [Show All compatible devices] check box.
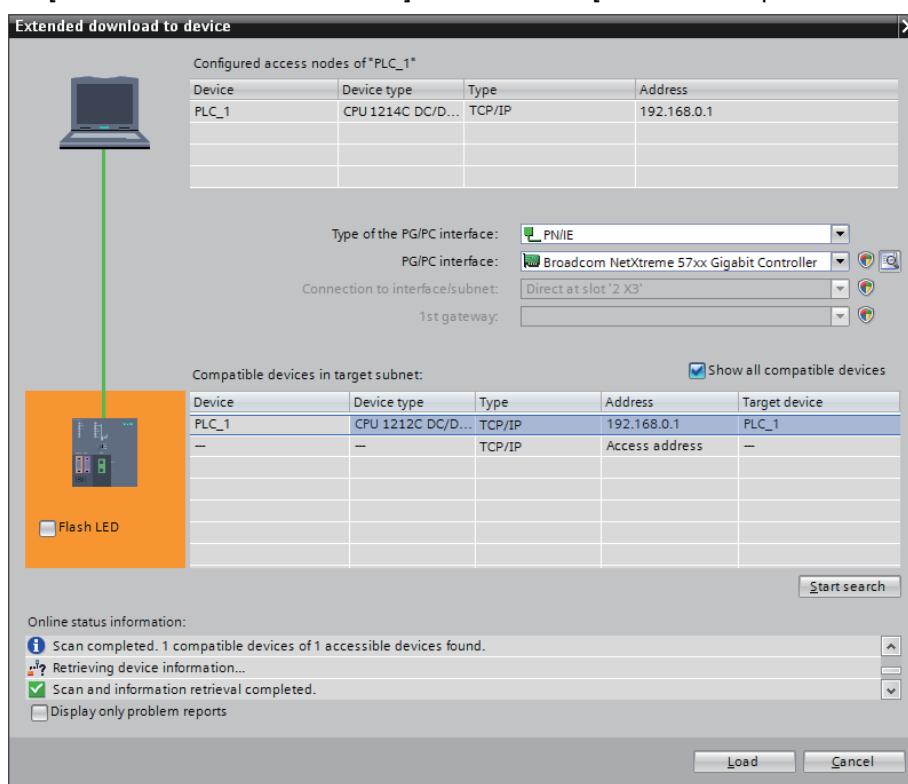

3   Create a Data block.

Double-click the [Project tree] - [Add new block].
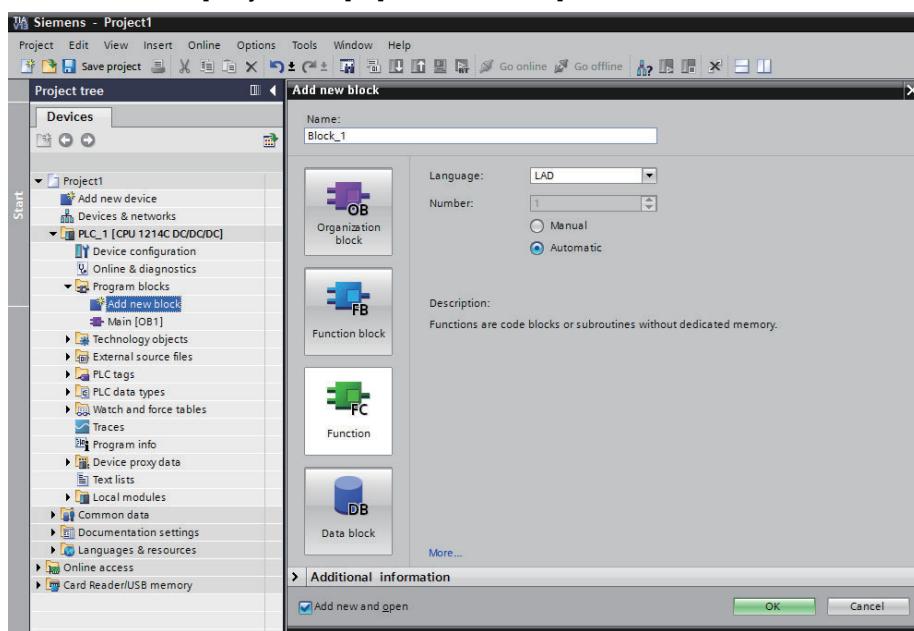

4   Click the [Data Block].

Example: If you should create a new Data block DB10, make settings as below.
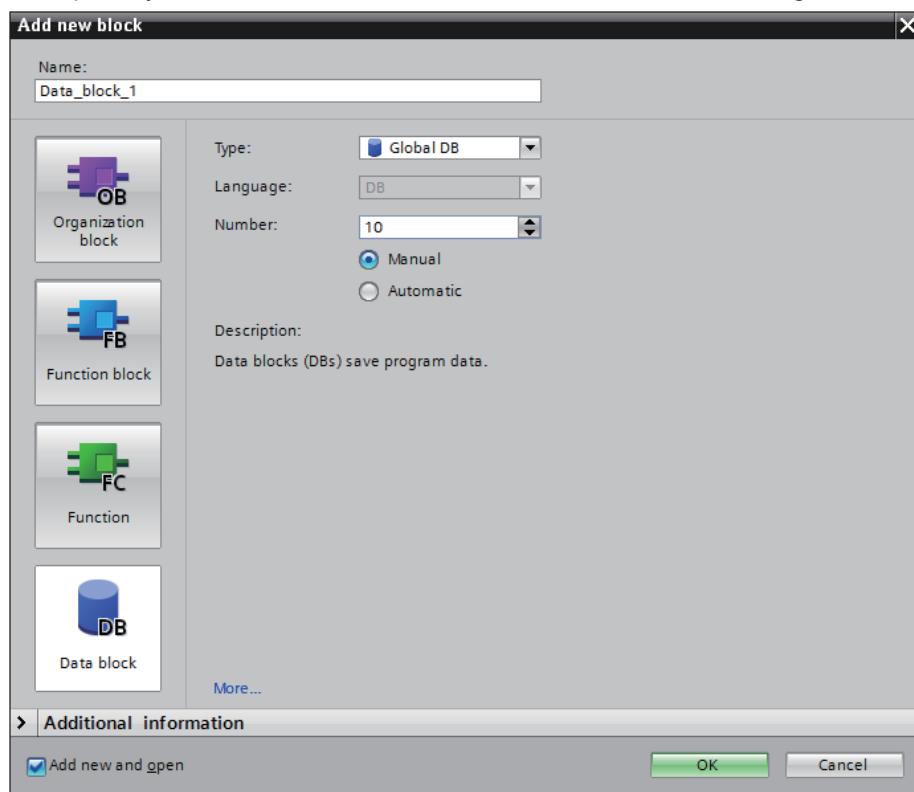

![Precautions icon] **Precautions for Correct Use**

- If you use the Data block, the data type of the NB and the PLC should be the same. For instance, if the Data type of the PLC is REAL, the storing data type of the numeric input component should be Float.
- When you define the Data block, secure the larger area than the one used for the NB. For instance, in order to use DB5.DBW32 in the NB, you need to secure DB5.DBW34 or later for the PLC.
- If you use the data block, do not check the check box, [Properties] - [Attributes] - [Only store in load memory].

5 Set options.

Remove check from "Optimized block access" check box.
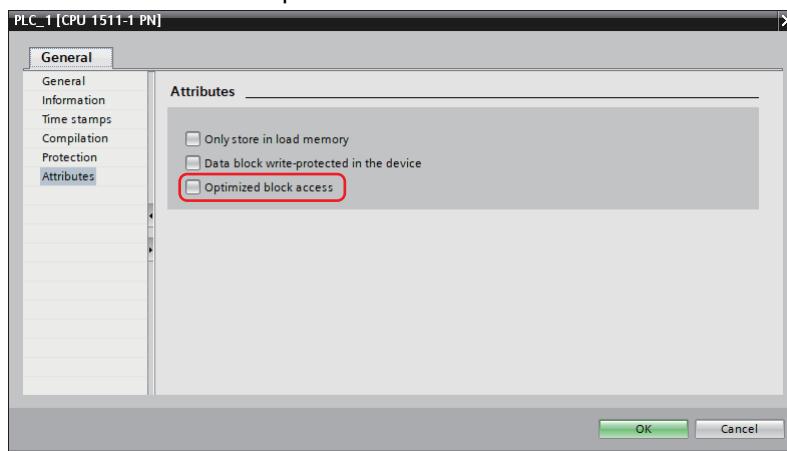

Add check to "Permit access with PUT/GET from remote partner (PLC, HMI, OPC,...)" check box.

2-4   Supported Registers
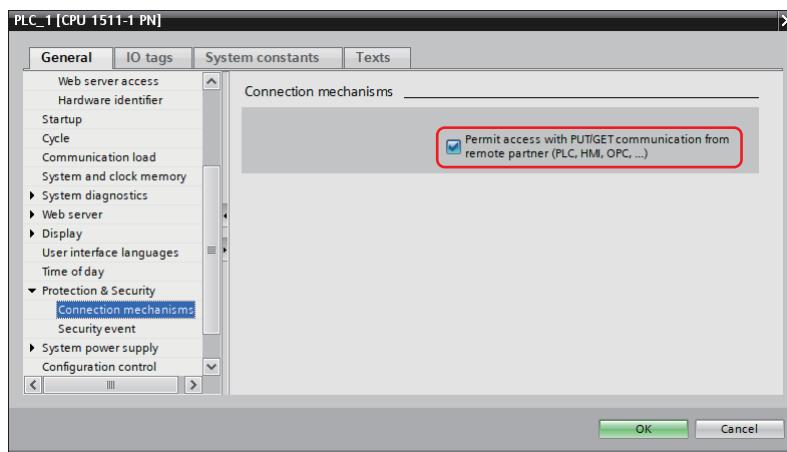

2-4-1   SIEMENS S7-200

Device	Bit Address	Word Address	Format	Notes
SCR Nodes	S.B 0.0~31.7	------	DD.O	
Special Memory Bit	SM.B 0.0~549.7	------	DDD.O	
Counter Bit	Cnt 0~255	------	DDD.O	
Counter Bit	Tim 0~255	------	DDD.O	
Variable Memory Nodes	V.B 0.0~10238.7	------	DDDDD.O	
Internal Memory Bit	M.B 0.0~31.7	------	DD.O	
Discrete Output and Map Register Nodes	Q.B 0.0~15.7	------	DD.O	
Discrete Input and Map Register Nodes	I.B 0.0~15.7	------	DD.O	
Analog Output	------	AQW 0~62	DD	
Analog Input:	------	AIW 0~62	DD	
SCR (32-bit)	------	SD 0~28	DD	
SCR	------	SW 0~30	DD	
Special Memory Registers (32-bit)	------	SMD 0~546	DDD	
Special Memory Registers	------	SMW 0~548	DDD	
Internal Memory Bit (32-bit)	------	MD 0~28	DD	
Internal Memory	------	MW 0~30	DD	
Discrete Output and Map Registers (32-bit)	------	QD 0~12	DD	
Discrete Output and Map Registers	------	QW 0~14	DD	
Discrete Input and Map Registers (32-bit)	------	ID 0~12	DD	
Discrete Input and Map Registers	------	IW 0~14	DD	
Counter PV	------	Cnt 0~255	DDD	
Timer PV	------	Tim 0~255	DDD	
Variable Memory (32-bit)	------	VD 0~10236	DDDDD	
Variable Memory	------	VW 0~10238	DDDDD	

Note The initial addresses of VW and VD must be even.
Address format description: D: decimal, O: octonary, H: hexadecimal.

2-4-2   SIEMENS S7-300/400 (PC Adapter Direct)

Device	Bit Address	Word Address	Format	Notes
External Input Nodes	I 0.0~511.7	------	DDDD.O	
External Output Nodes	Q 0.0~511.7	------	DDDD.O	
Internal Auxiliary Nodes	M 0.0~4095.7	------	DDDD.O	
Data Register Nodes	DBm.DBX 0~65535.7	------	DDDDD.O	m: 10 to 29
Data Registers	------	DBm.DBW 0~65534	DDDDD	m: 10 to 60
Data Registers (32-bit)	------	DBm.DBD 0~65532	DDDDD	m: 10 to 60
Internal Registers	------	MW 0~2046	DDDD	
Internal Registers (32-bit)	------	MD 0~2044	DDDD	
External Output Registers	------	QW 0~126	DDD	
External Output Registers (32-bit)	------	QD 0~124	DDD	
External Input Registers	------	IW 0~126	DDD	
External Input Registers (32-bit)	------	ID 0~124	DDD	

Note The initial addresses of DBm.DBW and DBm.DBD must be even.
Address format description: D: decimal, O: octonary, H: hexadecimal.

2-4-3   SIEMENS S7-200 (Smart) Ethernet (TCP Slave)

Device	Bit Address	Word Address	Format	Notes
Discrete Input and Map Register Nodes	I.B 0.0~31.7	------	DD.O	
Internal Memory Bit	M.B 0.0~31.7	------	DD.O	
Discrete Output and Map Register Nodes	Q.B 0.0~31.7	------	DD.O	
SCR Nodes	S.B 0.0~31.7	------	DD.O	
Special Memory Bit	SM.B 0.0~1535.7	------	DDDD.O	
Variable Memory Nodes	V.B 0.0~8191.7	------	DDDD.O	
Analog Inputs	------	AIW 0~110	DDD	
Analog Outputs	------	AQW 0~110	DDD	
Discrete Input and Map Registers (32-bit)	------	ID 0~28	DD	
Discrete Input and Map Registers	------	IW 0~30	DD	
Internal Memory (32-bit)	------	MD 0~28	DD	
Internal Memory	------	MW 0~30	DD	
Discrete Output and Map Registers (32-bit)	------	QD 0~28	DD	
Discrete Output and Map Registers	------	QW 0~30	DD	
SCR (32-bit)	------	SD 0~28	DD	
Special Memory Registers (32-bit)	------	SMD 0~1532	DDDD	
Special Memory Registers	------	SMW 0~1534	DDDD	
SCR	------	SW 0~30	DD	
Variable Memory (32-bit)	------	VD 0~8188	DDDD	
Variable Memory	------	VW 0~8190	DDDD	

Note When you access word access and double word access memories, always specify even address.

2-4-4   SIEMENS S7-300 Ethernet (TCP Slave)

Device	Bit Address	Word Address	Format	Note
Data Register Nodes	DBm_DBX 0.0~65535.7	------	DDDDD.O	m:1 to 10
Data Register Nodes	DBn_DBX 100000.0~25565535.7	------	DDDDDDDD.O	n:1 to 255
External Input Nodes	I 0.0~2047.7	------	DDDD.O	
Internal Auxiliary Nodes	M 0.0~8191.7	------	DDDD.O	
External Output Nodes	Q 0.0~2047.7	------	DDDD.O	
Data Registers (8-bit)	------	DBm_DBB 0~65535	DDDDD	m:1 to 10
Data Registers Nodes	------	DBm_DBB 0~65535	DDDDD	m:1 to 10
Data Registers (32-bit)	------	DBm_DBD 0~65532	DDDDD	m:1 to 10
Data Registers	------	DBm_DBW 0~65534	DDDDD	m:1 to 10
Data Registers	------	DBn_DBB 100000~25565535	DDDDDDDD	n:1 to 255
Data Registers (32-bit)	------	DBn_DBD 100000~25565532	DDDDDDDD	n:1 to 255
Data Registers	------	DBn_DBW 100000~25565534	DDDDDDDD	n:1 to 255
External Output Nodes	------	IB 0~2047	DDDD	
External Input Registers (32-bit)	------	ID 0~2044	DDDD	
External Input Registers	------	IW 0~2046	DDDD	
External Input Nodes	------	MB 0~8191	DDDD	
Internal Registers (32-bit)	------	MD 0~8188	DDDD	
Internal Registers	------	MW 0~8190	DDDD	
Internal Assistant Nodes	------	QB 0~2047	DDDD	
External Output Registers (32-bit)	------	QD 0~2044	DDDD	
External Output Registers	------	QW 0~2046	DDDD	

Note 1   DBn_DBX, DBn_DBW, and DBn_DBD represent custom blocks. The top three digits of the Data block address indicate block number. The other five digits after the block number indicate address. If the address part is less than five digits, fill in '0's. For instance, if you access to DB20.DBX23.4, set DBn_DBX to 2000023.4.

   2   When you access word access and double word access memories, always specify even address.

   3   MB, IB, and QB do not support the signed integer number as data format.

   4   If you define the Data block, secure the larger area than that used in the NB. For instance, if you use DB5.DBW32 in the NB, you should secure DB5.DBW34 or later in the PLC.

   5   When you access data block of double word, you cannot access the maximum address.

2-4-5   SIEMENS S7-1200 Ethernet (TCP Slave)

Device	Bit Address	Word Address	Format	Note
Data Register Nodes	DBm_DBX 0.0~65535.7	------	DDDDD.O	m:1 to 10
Data Register Nodes	DBn_DBX 100000.0~25565535.7	------	DDDDDDDD.O	n:1 to 255
External Input Nodes	I 0.0~1023.7	------	DDDD.O	
Internal Auxiliary Nodes	M 0.0~8191.7	------	DDDD.O	
External Output Nodes	Q 0.0~1023.7	------	DDDD.O	
Data Registers (32-bit)	------	DBm_DBD 0~65532	DDDDD	m:1 to 10
Data Registers	------	DBm_DBW 0~65534	DDDDD	m:1 to 10
Data Registers (32-bit)	------	DBn_DBD 100000~25565532	DDDDDDDD	n:1 to 255
Data Registers	------	DBn_DBW 100000~25565534	DDDDDDDD	n:1 to 255
External Input Registers (32-bit)	------	ID 0~1020	DDDD	
External Input Registers	------	IW 0~1022	DDDD	
Internal Registers (32-bit)	------	MD 0~8188	DDDD	
Internal Registers	------	MW 0~8190	DDDD	
External Output Registers (32-bit)	------	QD 0~1020	DDDD	
External Output Registers	------	QW 0~1022	DDDD	

Note 1 The data register of the NB-Designer observes the absolute address of the Data block instead of the S7-1200 global symbol data block.

2 DBn_DBX, DBn_DBW, and DBn_DBD represent custom blocks. The top three digits of the Data block address indicate block number. The other five digits after the block number indicate address. If the address part is less than five digits, fill in '0's. For instance, if you access to DB20.DBX23.4, set DBn_DBX to 2000023.4.

3 When you access word access and double word access memories, always specify even address.

4 If you define the data block, secure the larger area than that used in the NB. For instance, if you use DB5.DBW32 in the NB, you should secure DB5.DBW34 or later in the PLC.

5 When you access data block of double word, you cannot access the maximum address.

2-5   Cable Fabrication

When Using SIEMENS S7-200 Communication Protocol

● RS232 Communication Cable

Use RS-232/PPI multi-host cable and self-made RS232 cable manufactured by SIEMENS to communicate with PT.

- Self-made RS-232 Cable
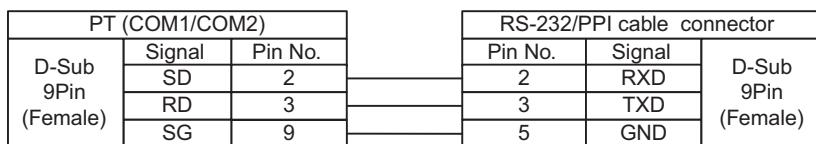

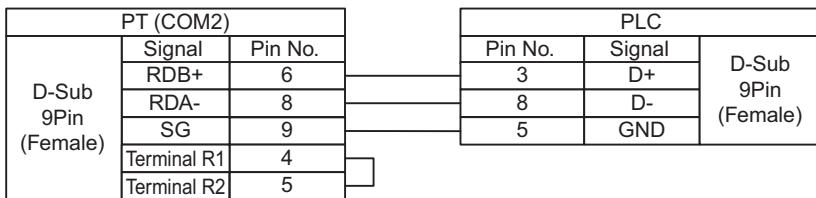

PT (COM1/COM2)				RS-232/PPI cable connector			
D-Sub 9Pin (Female)	Signal	Pin No.		Pin No.	Signal	D-Sub 9Pin (Female)	
	SD	2		2	RXD		
	RD	3		3	TXD		
	SG	9		5	GND		

● RS485 Communication Cable

PT (COM2)				PLC			
D-Sub 9Pin (Female)	Signal	Pin No.		Pin No.	Signal	D-Sub 9Pin (Female)	
	RDB+	6		3	D+		
	RDA-	8		8	D-		
	SG	9		5	GND		
	Terminal R1	4					
	Terminal R2	5					

When Using SIEMENS S7-300/400 (PC Adapter Direct) Communication Protocol

● RS232 Communication Cable

Use MPI-Adapter SSW7, RS232 (Order No.700-751-1VK21) manufactured by Helmholz and RS232 cable to communicate to PT.
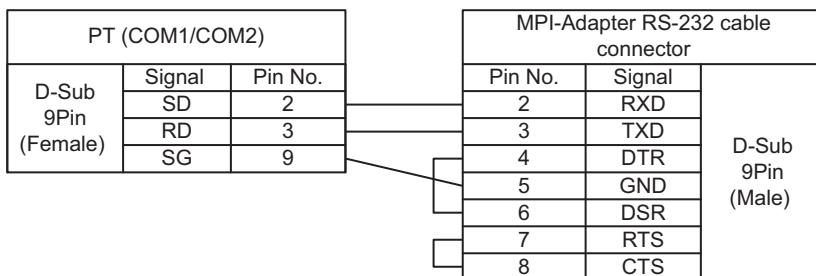

PT (COM1/COM2)				MPI-Adapter RS-232 cable connector			
D-Sub 9Pin (Female)	Signal	Pin No.		Pin No.	Signal	D-Sub 9Pin (Male)	
	SD	2		2	RXD		
	RD	3		3	TXD		
	SG	9		4	DTR		
				5	GND		
				6	DSR		
				7	RTS		
				8	CTS		

3

Connecting to Mitsubishi PLCs

This section describes the connection to Mitsubishi PLCs.
NB☐☐-TW☐☐B and NB☐☐-TW☐☐B-V1 support different PLC models, please refer to *Section 1* for details.

3-1   Serial Port and Ethernet

3-1-1   Serial Port

Series	CPU	Link Module (The products in ( ) are also needed)	Driver
FXCPU	FX1S	RS422 on the CPU unit	Mitsubishi FX1S *2
		FX2NC-485-ADP (FX1N-CNV-BD) FX0N-485-ADP (FX1N-CNV-BD) FX1N-☐☐☐-BD	Mitsubishi FX1S *2 Mitsubishi FX-485ADP/485BD/232BD (Multi-station) *1

3-3   Communication Setting

3-3-1   When Using Mitsubishi FX1S, Mitsubishi FX1N/2N/3G and Mitsubishi FX3U Communication Protocols

PT Settings

PT default communication parameters: 9600bps (Baud Rate), 7 (Data Bit), even (Parity Check), 1 (Stop Bit) and 0 (PLC Station No.)

The PLC Communication Time Out, Max interval of word (bit) block pack, Max size of word(bit) block package on the right of the dialog box vary with PLC protocols. Generally the defaults are selected.

Note This protocol can be used when communicating with the PLC through the programming port of the CPU and the Functions Extension board. This Protocol does not support Multiple Station No. of the Function Extension board. The supporting Baud Rates are as follows. If other Baud Rates than these are selected, the communication is unavailable.
9600bps, 115200bps: FX3G, FX3GC, FX3S, FX3U, FX3UC
9600bps fixed: other CPUs than above

RS422 Communication
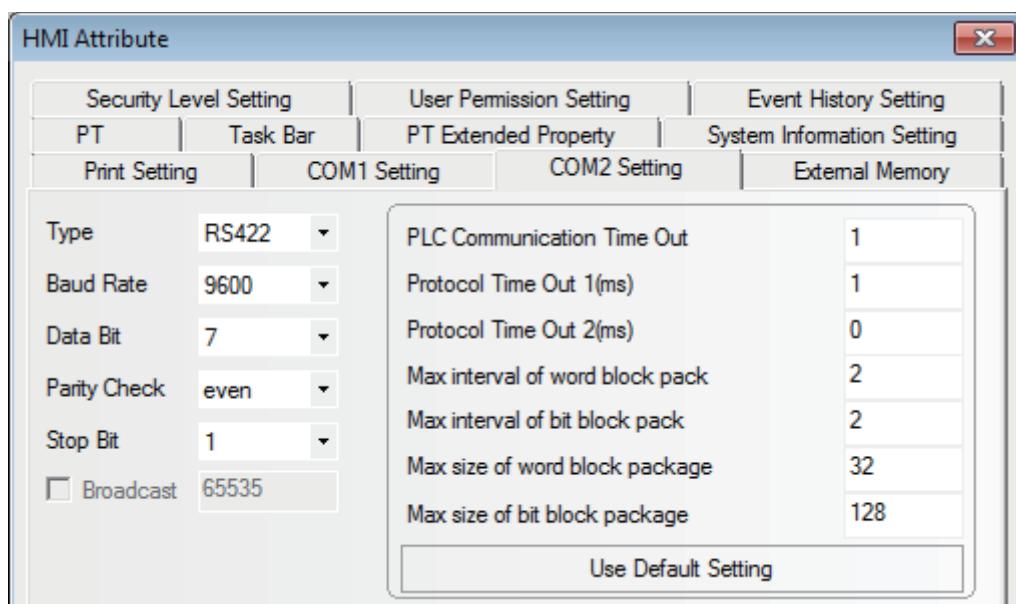

RS232 Communication
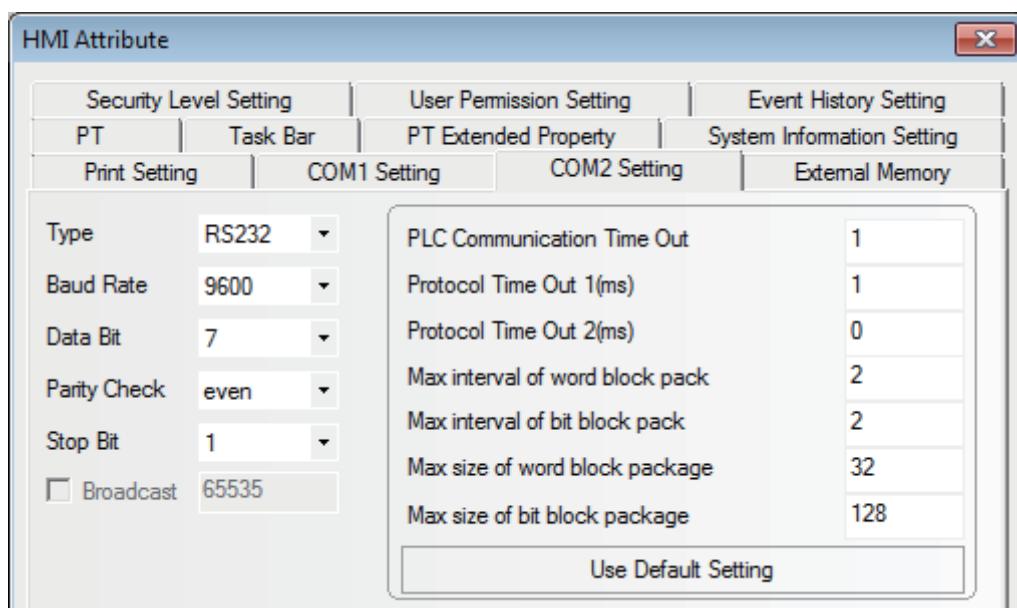

PLC Settings

The PLC setting is as shown below when **Mitsubishi FX1S, Mitsubishi FX1N/2N/3G and Mitsubishi FX3U** communication protocols are used:

Click the [Default] button to make settings without checking the [Communication Setting]:
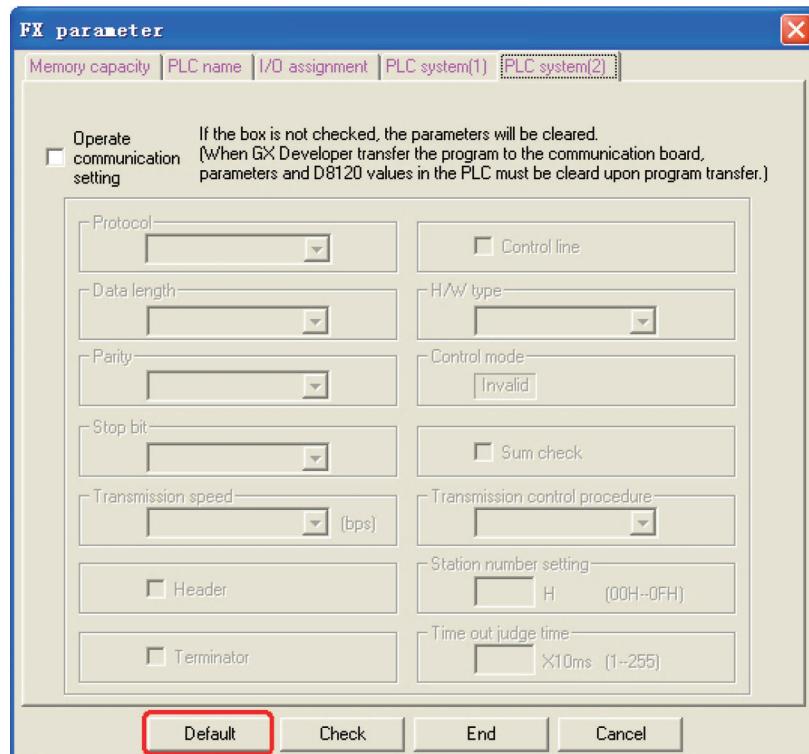

Note 1   The communication protocols such as Mitsubishi FX1S, Mitsubishi FX1N/2N/3G and Mitsubishi FX3U etc. can be selected according to PLC model if the Station No. is not used when the communication is realized through the communication function expansion board.

2   Make sure the value of communication format D8120 is 0 when the communication is realized through the communication function expansion board.

3-3-2   When Using Mitsubishi FX-485ADP/485BD/232BD (Multi-station) Communication Protocols

PT Settings

PT default communication parameters: 19200bps (Baud Rate), 7(Data Bit), even (Parity Check), 2 (Stop Bit) and 0 (PLC Station No.)

Note: The protocols are only applicable to PLCs communicating through communication function expansion board and support Multiple Station No. and Baud Rate settings.

RS422 Communication
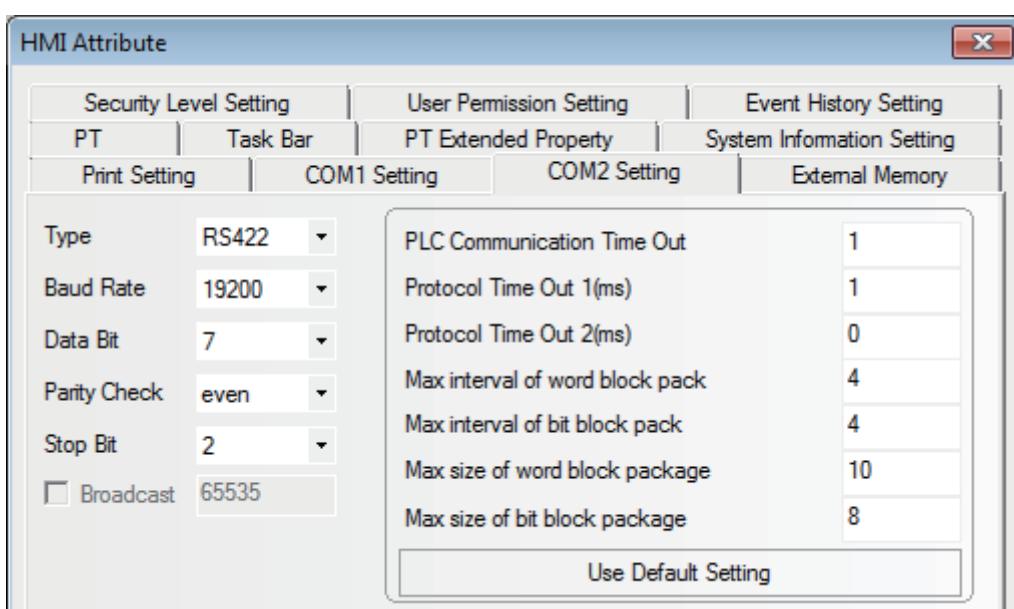

RS232 Communication
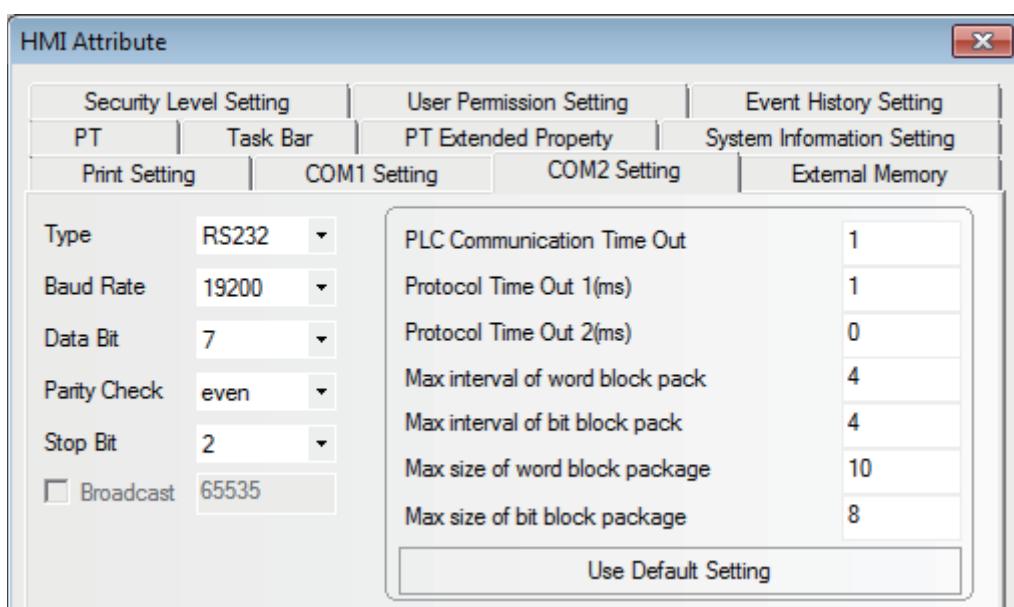

PLC Settings

The PLC setting is as shown below when **FX-485ADP/485BD/232BD (Multi-station)** communication protocols are used:

1   Double-click the [PLC Parameter] under [Project Data List] in GX Developer software.

2   Open the [FX Parameter] dialog box.

(1)   FX1S/FX1N/FX2N/3G Series PLC
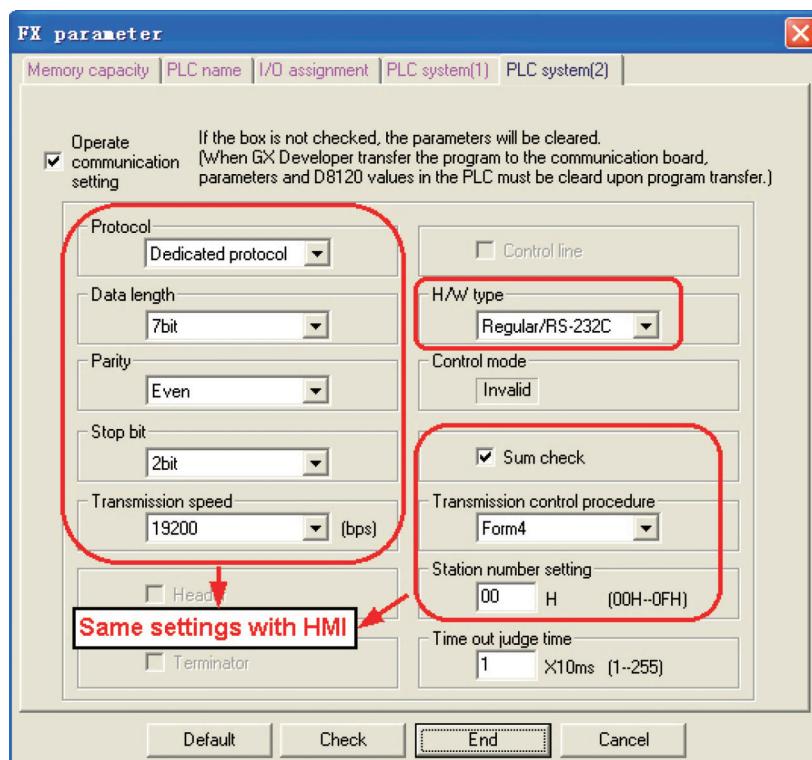

Check the [Operate communication setting] option.

Note 1   Set the parameters as follows.
The [Dedicated Protocol] is selected for Protocol, the [Sum Check] is checked, and [Form4] is selected for the Transmission Control Sequence.

2   Set the [H/W Type] as follows.
"Regular/RS-232C" is selected when FX□□-232-BD communications is used or "RS-485" is selected when FX-232-BD or FX□□-485-BD/FX□□-485-ADP communications is used.

(2)   FX3U/3UC Series PLC
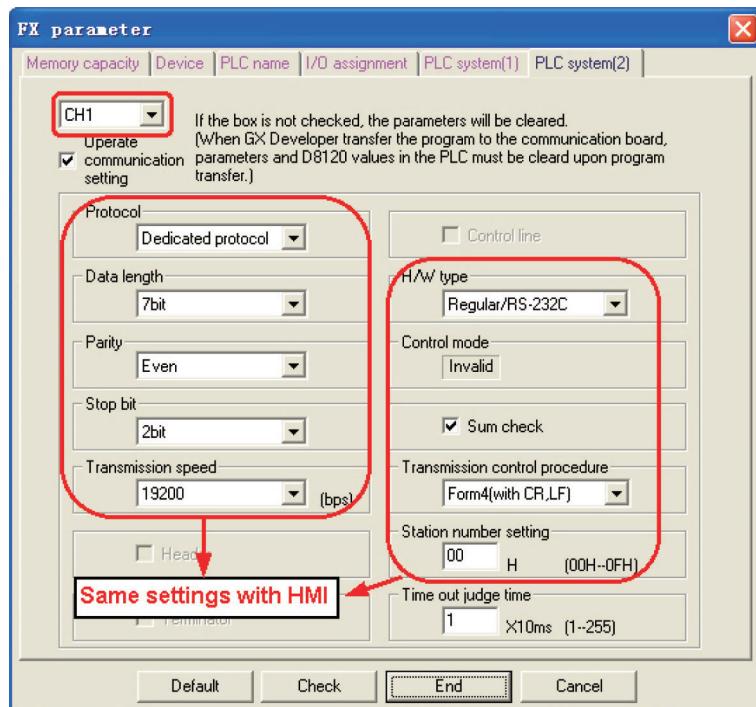

Check the [Operate communication setting] option.

Note 1   The [CH1] should be selected for FX3U/3UC Series PLC.

2   Set the parameters as follows.
[Dedicated Protocol] is selected for Protocol, [Sum Check] is checked, and [Form4] is selected for the Transmission Control Sequence.

3   Set the [H/W Type] as follows.
"Regular/RS-232C" is selected when FX□□-232-BD communications is used or "RS-485" is selected when FX□□-485-BD/FX□□-485-ADP communications is used.

Aside from using [FX Parameter], the user can use the special data register D8120 in PLC to set the communication parameters for PLC.

Special Data Registers	Descriptions
D8120	Communication format
D8121	Station No. setting
D8129	Data network out-time counting

Applicable to FX3U/3UC and other FX Series PLCs using CH1

- For example:

If the PLC communication parameters are: 9600bps (Baud Rate), 7 (Data Bit), even (Parity Check), 2 (Stop Bit), 1(PLC Station No.), RS485 (Communication Method) and 1 (PLC Communication Time Out), then D8120=0xE08E,

D8121=1,

and D8129=1.

Note   The settings will be valid when the PLC is restarted after the D8120 setting is modified.

3-3-3   When Using FX2N-10GM/20GM Communication Protocol

PT Settings

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), even (Parity Check), 1 (Stop Bit) and 0 (PLC Station No.)

Note This protocol can be used when communicating with the PLC through the programming port of the CPU and the Functions Extension board. The baud rate is fixed to 9600 bps. If the baud rate is set to the other speed, the communications cannot be available. The protocol does not support the multiple station No. of the Functions Extension board.

RS232 Communication
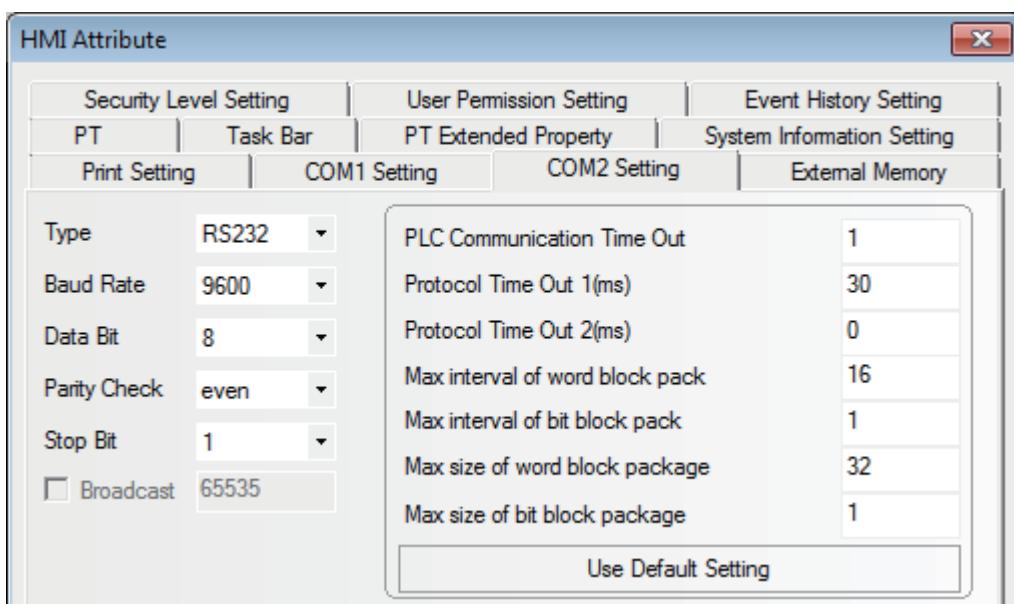

RS422 Communication
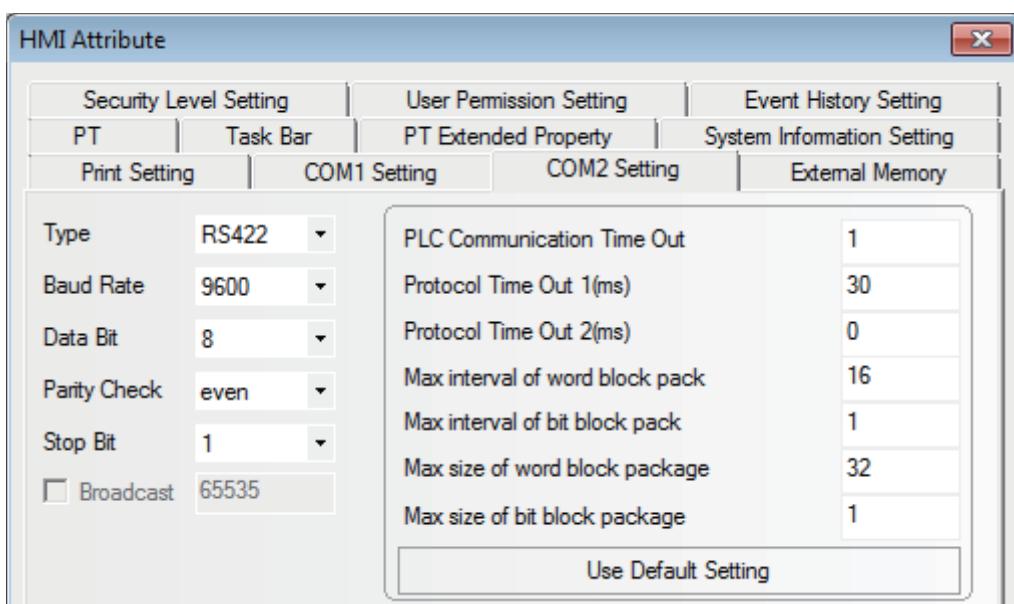

3-3-4   When Using Mitsubishi Q00J (CPU Port) Communication Protocol

PT Settings

PT default communication parameters: 19200bps (Baud Rate), 8 (Data Bit), odd (Parity Check), 1 (Stop Bit) and 0 (PLC Station No.) (Multiple Station No. is not supported.)

RS232 Communication
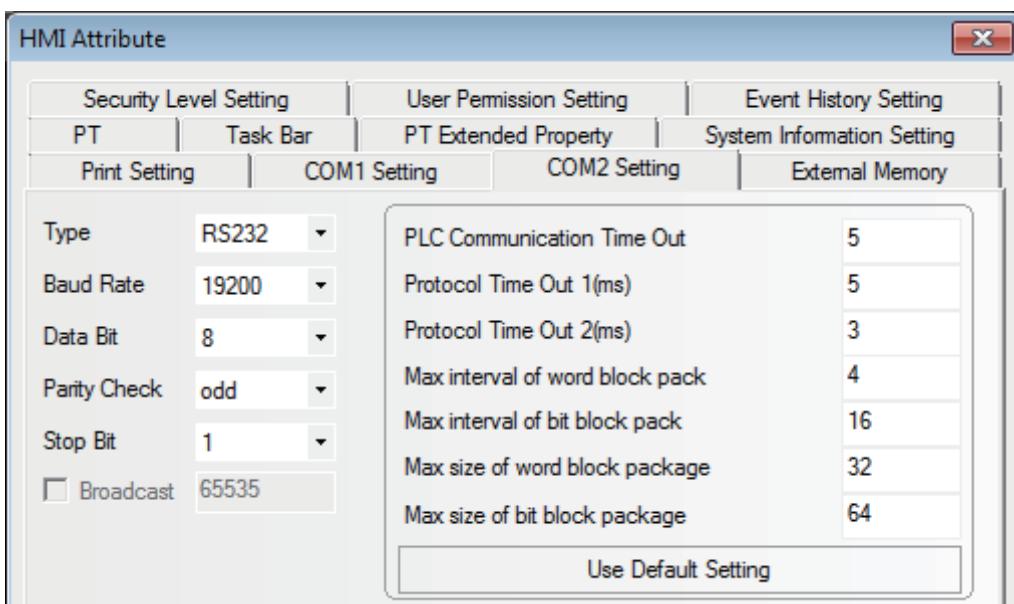

Note   There is no need to set PLC baud rate that will automatically vary with the baud rate set by PT.

3-3-5   When Using Mitsubishi Q series (CPU Port) Communication Protocol

PT Settings

PT default communication parameters: 115200bps (Baud Rate), 8 (Data Bit), odd (Parity Check), 1 (Stop Bit) and 0 (PLC Station No.) (Multiple Station No. is not supported.)

RS232 Communication
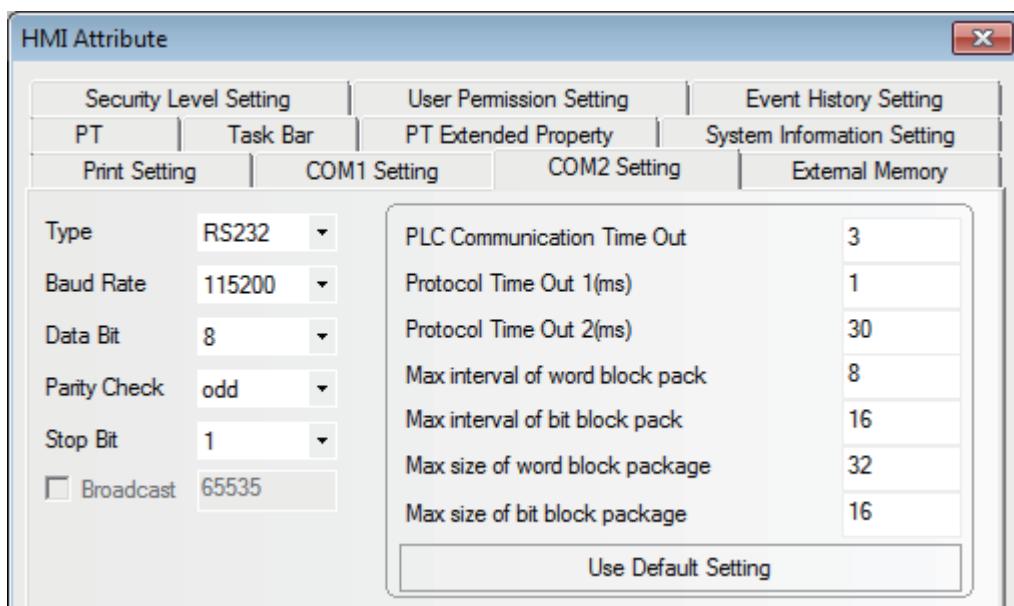

Note   There is no need to set PLC baud rate that will automatically vary with the baud rate set by PT.

3-3-6   When Using Mitsubishi Q06H Communication Protocol

PT Settings

PT default communication parameters: 115200bps (Baud Rate), 8 (Data Bit), odd (Parity Check), 1 (Stop Bit) and 0 (PLC Station No.) (Multiple Station No. is not supported.)

RS232 Communication
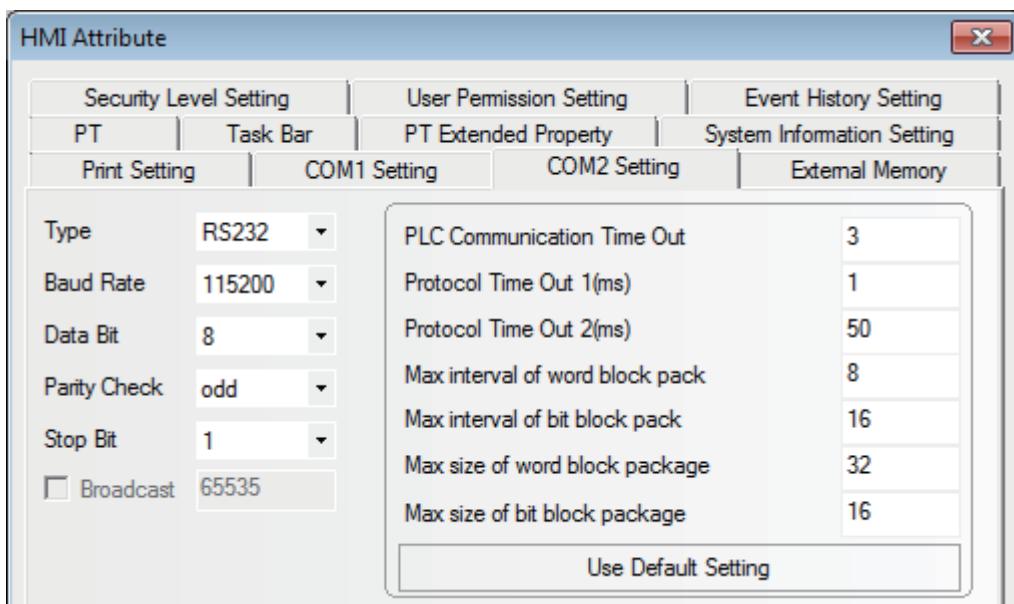

Note   There is no need to set PLC baud rate that will automatically vary with the baud rate set by PT.

3-3-7   When Using Mitsubishi Q_QnA (Link Port) Communication Protocol

PT Settings

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), odd (Parity Check), 1 (Stop Bit) and 0 (PLC Station No.)

RS232 Communication
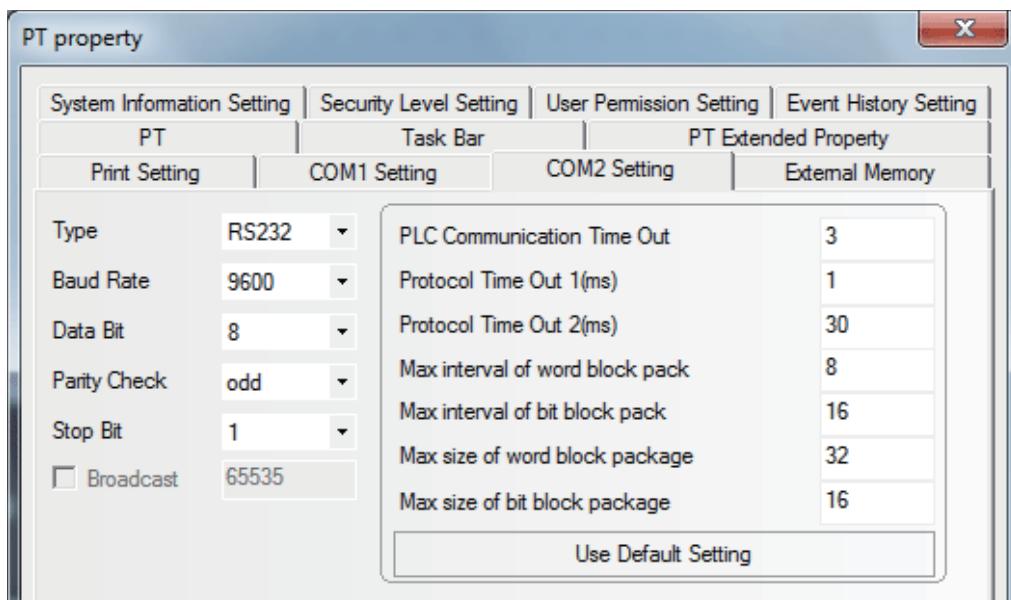

RS422 Communication
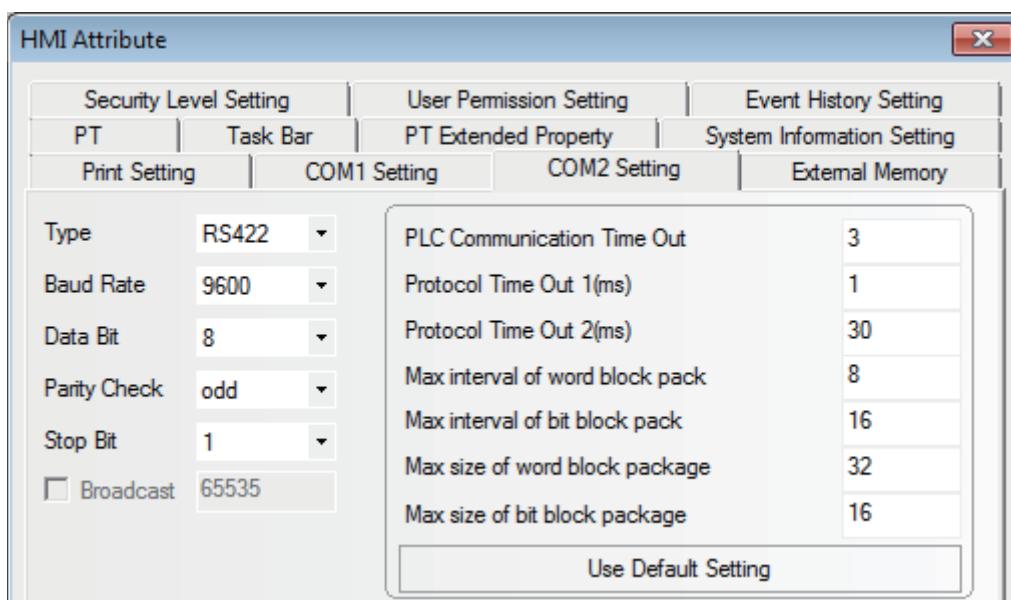

PLC Settings

The PLC settings is as shown below when **Mitsubishi Q_QnA (Link Port) or Mitsubishi Melsec Q** communication protocols are used:

● **Communication through CPU Port**
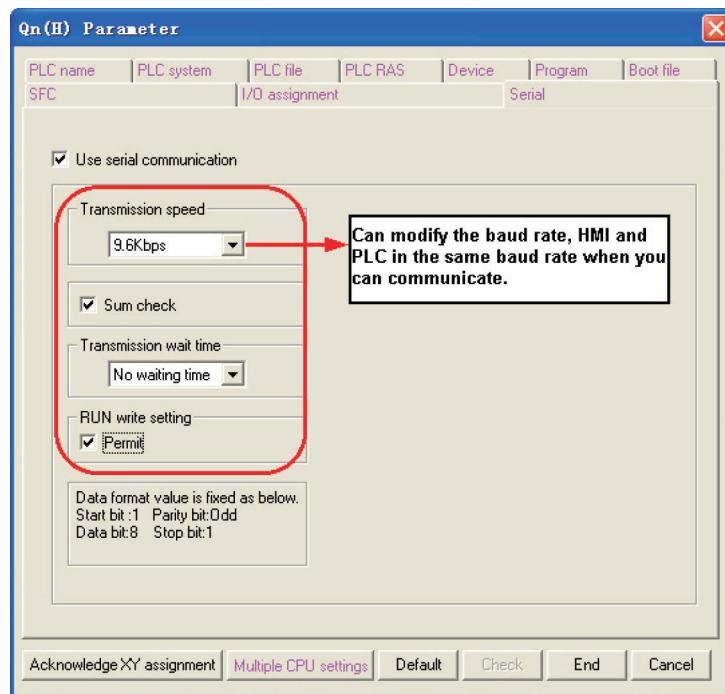

● **Communication through C24 Serial Port Communication Module**

1 Open [Parameter] on Project Data List and double-click [PLC parameter], and select [I/O assignment] after the [Qn (H) Parameter] dialog box is opened.
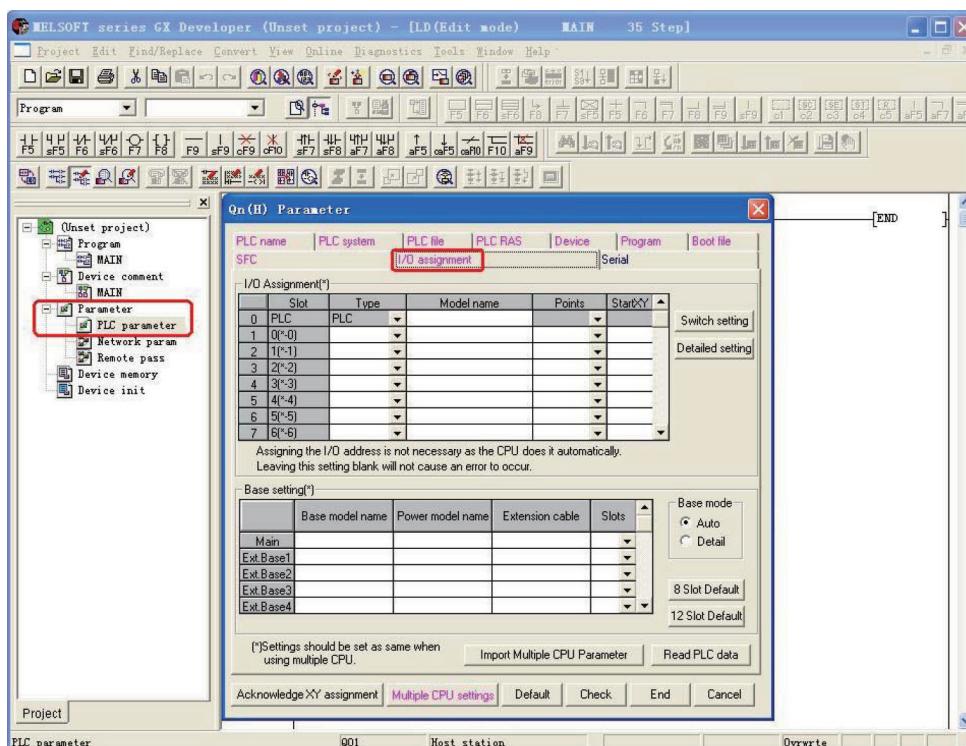

2   Click the [Type] dropdown list to select the [Intelli.] option.
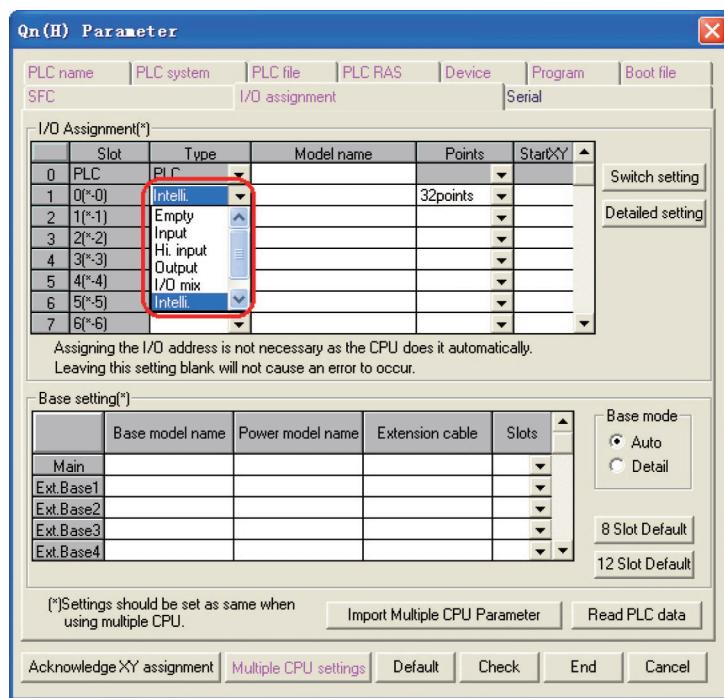

3   Click the [Switch setting] button and make settings as shown below:
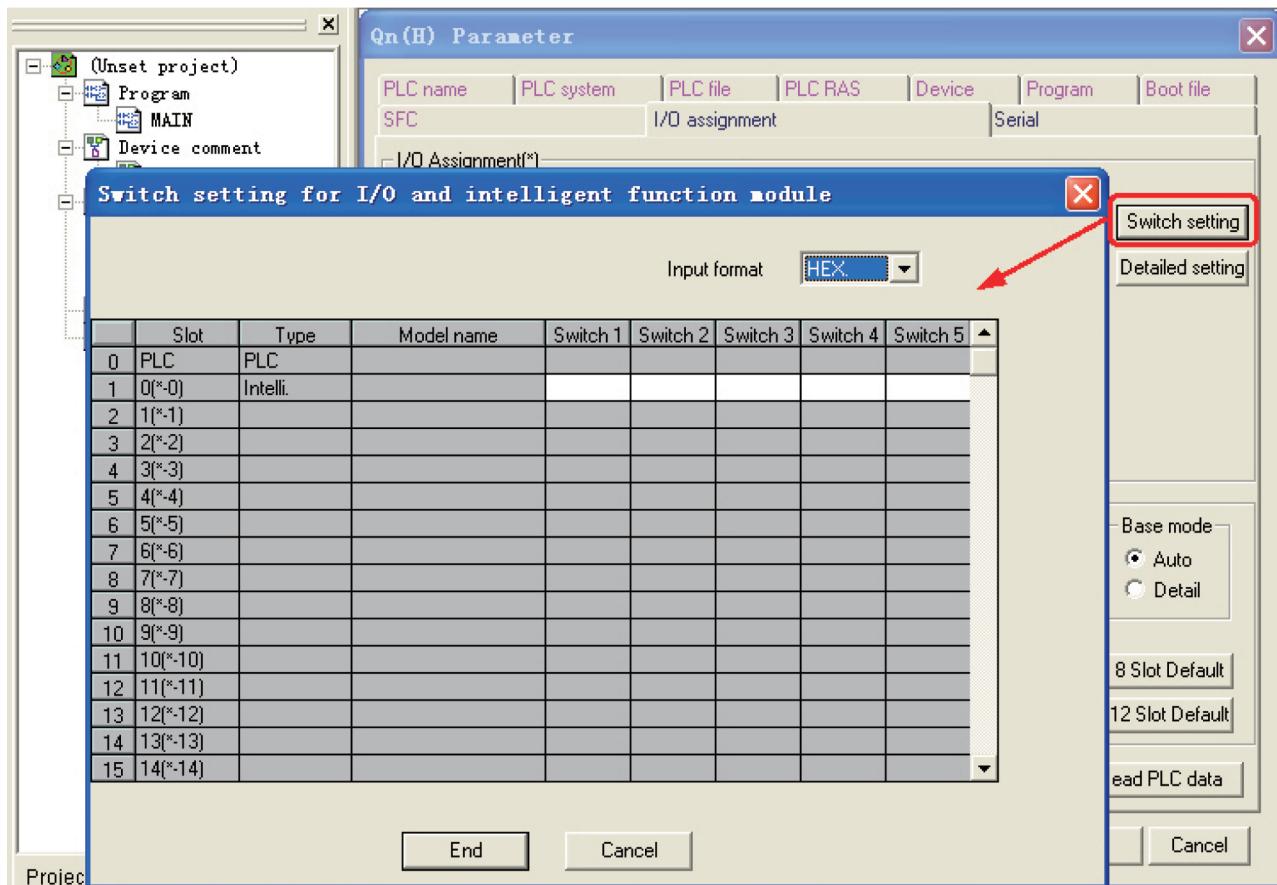

The attribute descriptions of Switch1, Switch2, Switch3, Switch4 and Switch5 are as shown below:

Switch	Content					[Example]
Switch 1	CH1:Baud rate , transmission setting Bit 15 8 7 0 [Baud rate transmission setting]					0BEEH 115Kbps 8bit 1bit Even

bps	Settings
4800	04H
9600	05H
19200	07H
38400	09H
57600	0AH
115200	0BH

Bit	Content	OFF	ON
0	Action set	Independent	Linked
1	Data bit	7	8
2	Parity check bit	Reserved	Served
3	Parity check	Odd	Even
4	Stop bit	1	2
5	Sum check	Reserved	Served
6	Run write	disable	enable
7	Set to change	disable	enable

Switch	Content		[Example]
Switch 2	CH1:Communication protocol	MC protocol Form 5 Binary code	0005H
Switch 3	CH2:Baud rate,transmission setting (The same with the switch 1)		0BEEH
Switch 4	CH2:Communication protocol	MC protocol Form 5 Binary code	0005H
Switch 5	Set the station number	0~31	000H

• Setting Example

The Switch3, Switch4 and Switch5 can be set as shown below if the CH2 RS422 communication parameters and Station No. are set to 19200/8/Odd/1 and 0 respectively:

Setting Switch	Setting Value	Setup Description
Switch 3	07E6	19200/8/With/Odd/1
Switch 4	0005	Mode = Form 5
Switch 5	0000	Station No. = 0
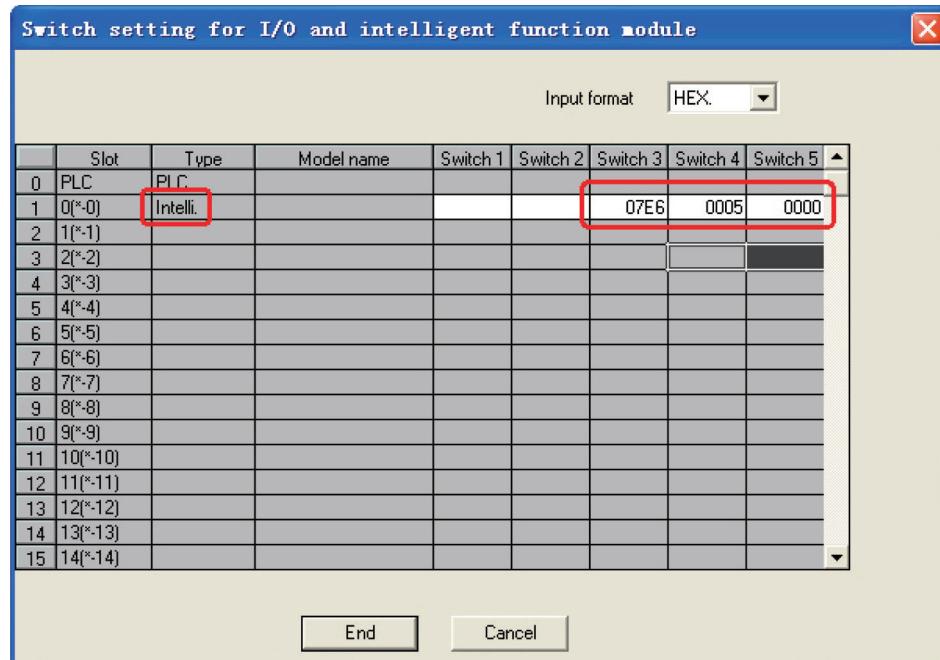

The Switch1, Switch2 and Switch5 can be set as shown below if the CH1 RS232 communication parameters and Station No. are set to 19200/8/Odd/1 and 0 respectively:

Setting Switch	Setting Value	Setup Description
Switch 1	07E6	19200/8/With/Odd/1
Switch 2	0005	Mode = Form 5
Switch 5	0000	Station No. = 0

The difference between **Mitsubishi Q_QnA (Link Port)** protocol and **Mitsubishi Melsec Q** protocol:

• Mitsubishi Q_QnA (Link Port) protocol features fast communication speed.

• Mitsubishi Melsec Q protocol features slow communication speed.

3-3-8   When Using Mitsubishi FX Series Ethernet(TCP Slave) Communication Protocol

PT Settings

The PT Network Settings are as shown below.
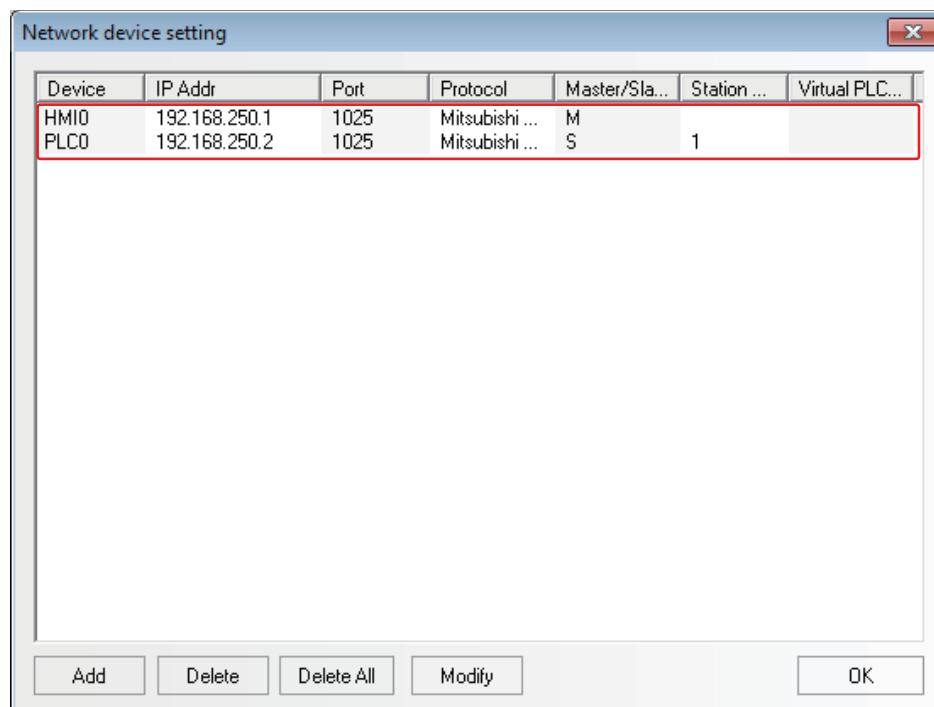

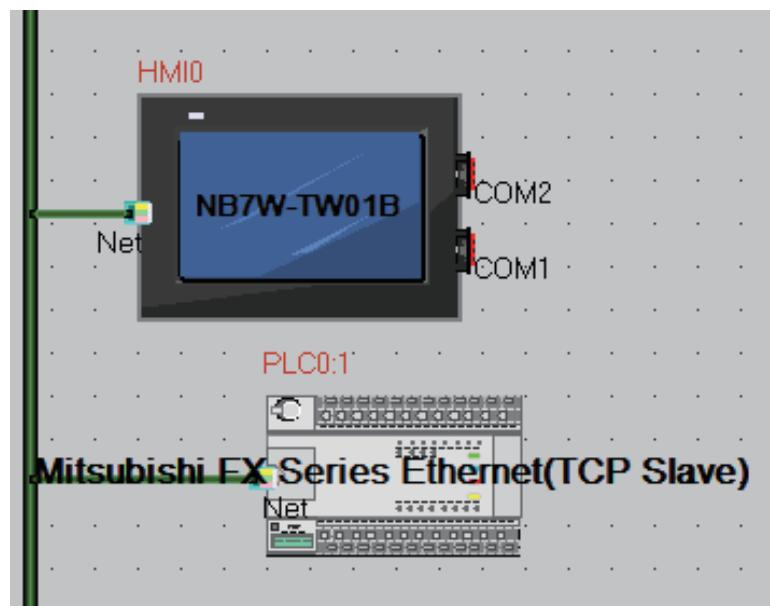

PLC Settings

The PLC Settings when using Communication Protocol of Mitsubishi FX Series Ethernet (TCP Slave) is as shown below.

1 Start-up Setting Tool, FX3U-ENET-L.
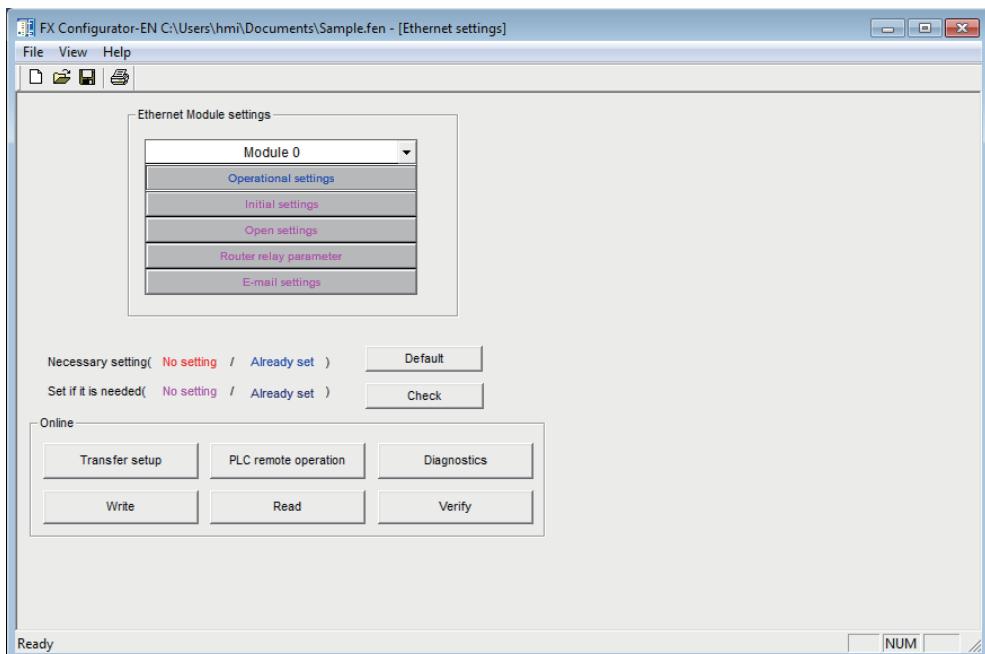

2 Click the [Operation Setting] to open [Ethernet Operation Setting].

Set the IP address to the same parameters as the PT settings.

Other settings should be the same as the dialog box as below.

3   Click the [Open Setting] to open the [Ethernet Open Setting].

	Protocol	Open system	Fixed buffer	Fixed buffer communication procedure	Pairing open	Existence confirmation	Host station Port No. (DEC.)	Transmission target device IP address	Transmission target device Port No. (DEC.)
1									
2									
3	TCP	Unpassive	Send	Procedure exist	Disable	No confirm	1025		
4	TCP	MELSOFT connection							
5									
6									
7									
8									

End   Cancel
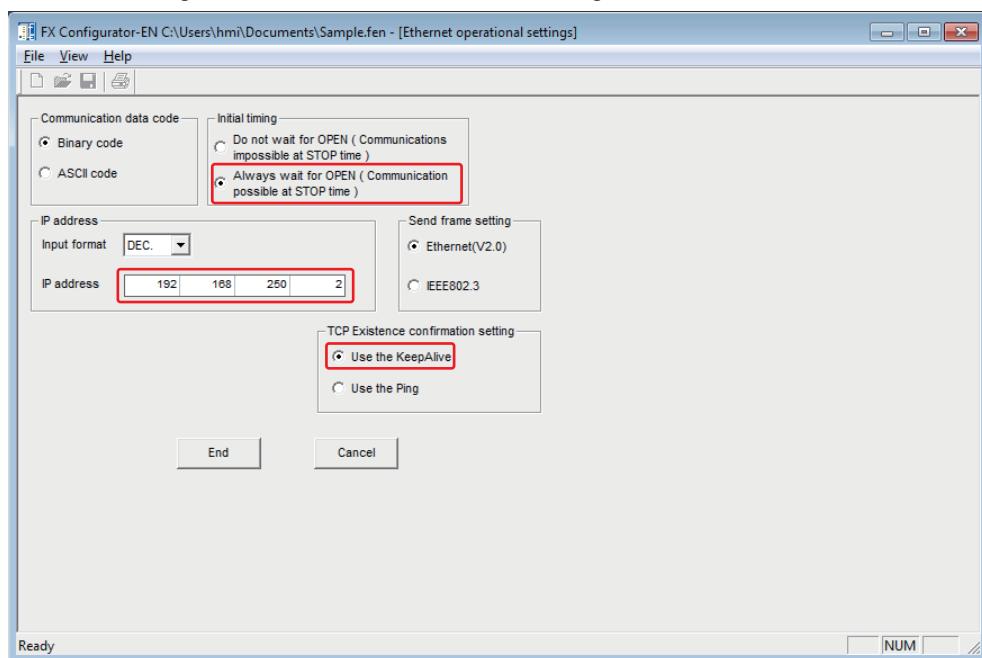

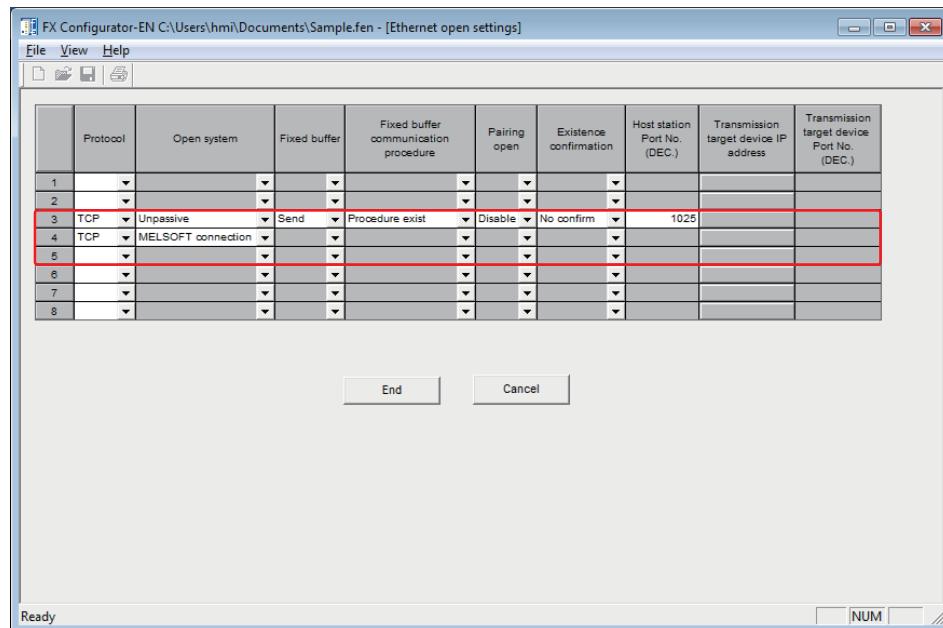

3-3-9   When Using Mitsubishi QnA 3EBin Ethernet (TCP Slave) Communication Protocol

PT Settings

The PT Network Settings are as shown below.

Note   The Station No. is fixed to 255.
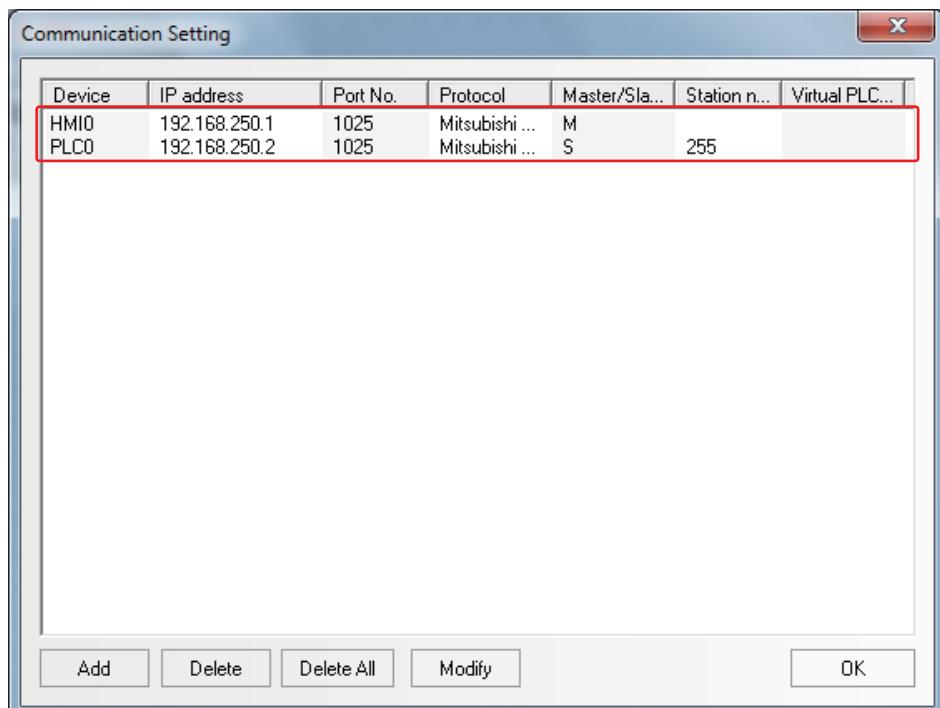

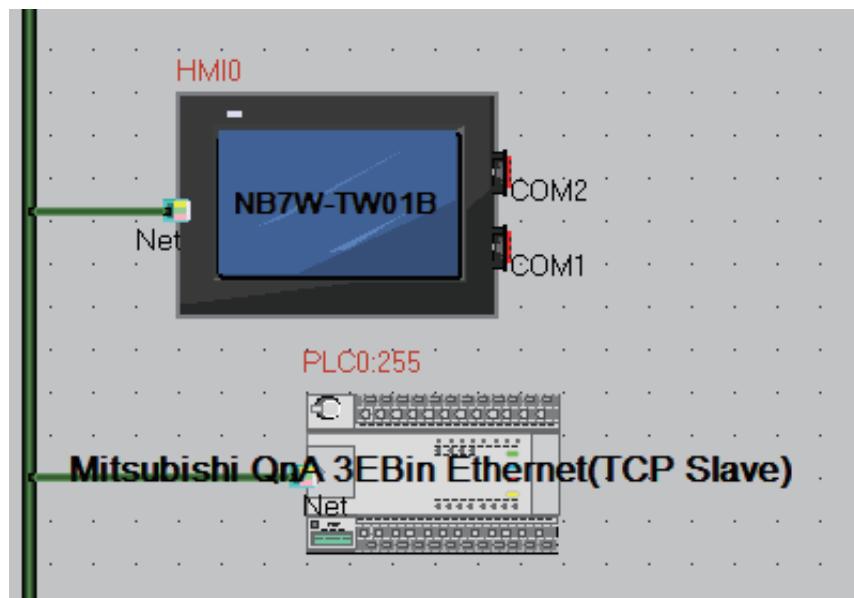

PLC Settings

The PLC Settings when using Communication Protocol of Mitsubishi QnA 3EBin Ethernet (TCP Slave) is as shown below.

1   Double-click the [PLC Parameter] under [Project] of GX Works2 software.
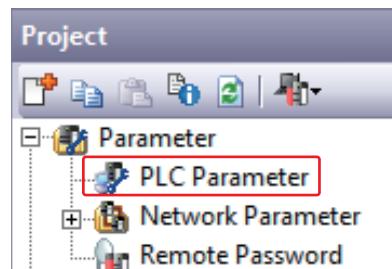

2   [Q Parameter Setting] or [L Parameter Setting] dialog boxes are open.

Set the IP address to the same parameters as the PT settings.

Other settings should be the same as the dialog box as below.
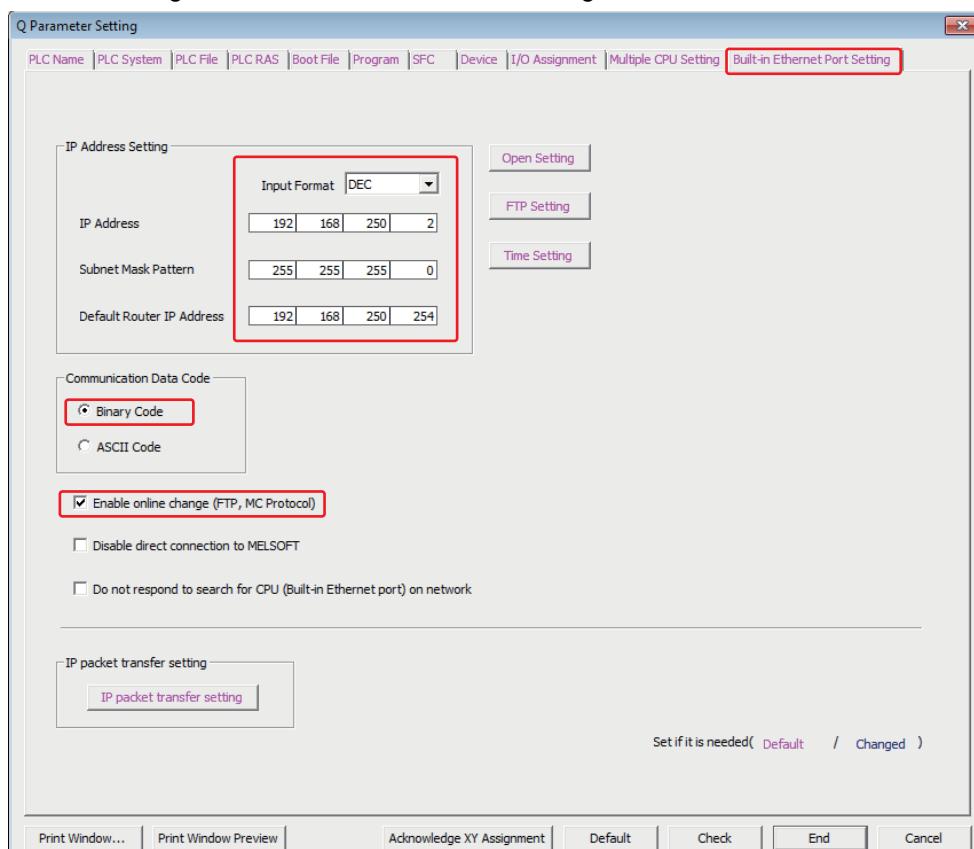

3 Click the [Open Setting] to open [Build-in Ethernet Port Open Setting] dialog box.

Set the parameters as the same with the dialog box as follows.

	Protocol	Open System	TCP Connection	Host Station	Destination IP Address	Destination Port No.	Start Device to Store Predefined Protocol
1	TCP	MC Protocol		1025			
2	TCP	MELSOFT Connection					
3	TCP	MELSOFT Connection					
4	TCP	MELSOFT Connection					
5	TCP	MELSOFT Connection					
6	TCP	MELSOFT Connection					
7	TCP	MELSOFT Connection					
8	TCP	MELSOFT Connection					
9	TCP	MELSOFT Connection					
10	TCP	MELSOFT Connection					
11	TCP	MELSOFT Connection					
12	TCP	MELSOFT Connection					
13	TCP	MELSOFT Connection					
14	TCP	MELSOFT Connection					
15	TCP	MELSOFT Connection					
16	TCP	MELSOFT Connection					

IP Address/Port No. Input Format DEC

(*) IP Address and Port No. will be displayed by the selected format.
Please enter the value according to the selected number.

[End] [Cancel]

3-3-10   When Using Mitsubishi QJ71E71 EtherNet Slave Communication Protocol

PT Settings

The PT Network Settings are as shown below.

PLC Settings

PLC Settings when using Mitsubishi QJ71E71 EtherNet Slave Communication Protocol are as shown below.

1 Double-click the [Ethernet/CC IE/MELSECNET] under [Project] of GX Works2 software.
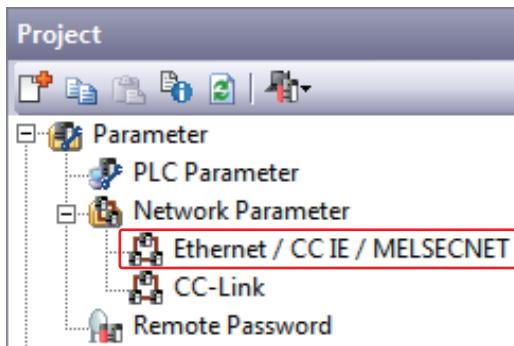

2 [Network Parameter] tab is opened.

Set the parameters as the same with the diagram as follows.

	Module 1	Module 2
Network Type	Ethernet	None
Start I/O No.	0000	
Network No.	1	
Total Stations		
Group No.	0	
Station No.	2	
Mode	Online	
	Operation Setting	
	Initial Setting	
	Open Setting	
	Router Relay Parameter	
	Station No. <->IP Information	
	FTP Parameters	
	E-mail Setting	
	Interrupt Settings	

Note When connecting to NB, each parameter should be restricted to the ones as follows.
Start I/O No.: 0000
Network No.: 1
Group No.: 0
Station No.: 2 to 64
Mode: Online

3   Click the [Operation Setting] to open [Ethernet Operation Setting].

Set the IP address to the same parameters as the PT settings.

Other settings should be the same as the dialog box as below.
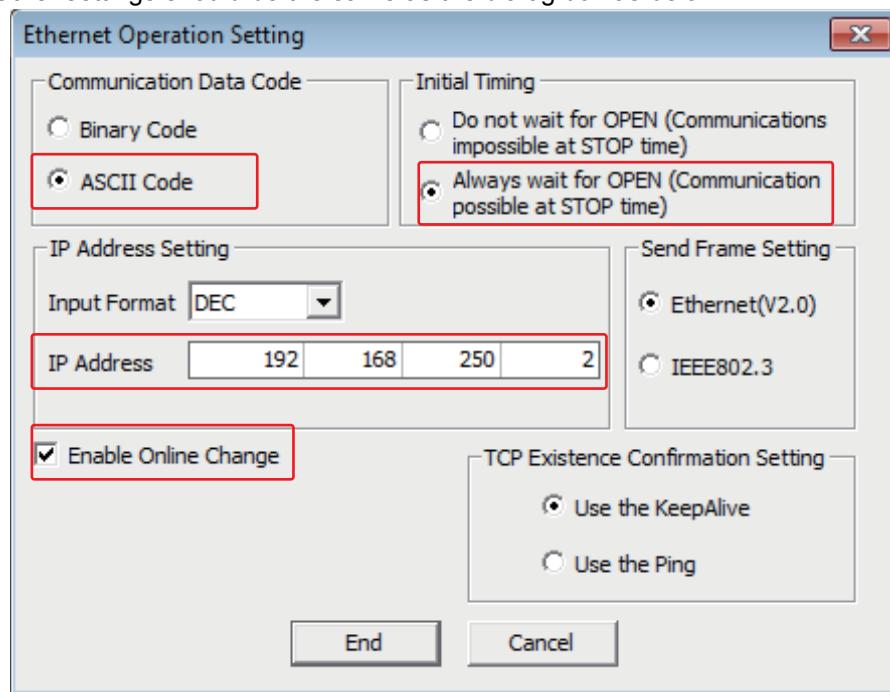

4   Click the [Open Setting] to open the [Ethernet Open Setting] tab.

Select TCP in [Protocol] and MELSOFT Connection in [Open System], respectively.

3-4   Supported Registers

Precautions for Correct Use

The operation is not guaranteed when the area that does not exist phisically is accessed.

Additional Information

Address format description: D: decimal, O: octal, H: hexadecimal.

4-3   Communication Parameter Setting

PT Settings

● **When Using Schneider Modicon Uni-TelWay Protocol**

PT default communication parameters: 19200bps (Baud Rate), 8 (Data Bit), odd (Parity Check), 1 (Stop Bit) and 4 (PLC Station No.)

RS232 Communication

HMI Attribute		
Security Level Setting	User Permission Setting	Event History Setting
PT / Task Bar	PT Extended Property	System Information Setting
Print Setting / COM1 Setting	COM2 Setting	External Memory

Type	RS232	PLC Communication Time Out	3
Baud Rate	19200	Protocol Time Out 1(ms)	50
Data Bit	8	Protocol Time Out 2(ms)	300
Parity Check	odd	Max interval of word block pack	8
Stop Bit	1	Max interval of bit block pack	8
Broadcast	65535	Max size of word block package	32
		Max size of bit block package	16
		Use Default Setting	

RS485 Communication

HMI Attribute		
Security Level Setting	User Permission Setting	Event History Setting
PT / Task Bar	PT Extended Property	System Information Setting
Print Setting / COM1 Setting	COM2 Setting	External Memory

Type	RS485	PLC Communication Time Out	3
Baud Rate	19200	Protocol Time Out 1(ms)	50
Data Bit	8	Protocol Time Out 2(ms)	300
Parity Check	odd	Max interval of word block pack	8
Stop Bit	1	Max interval of bit block pack	8
Broadcast	65535	Max size of word block package	32
		Max size of bit block package	16
		Use Default Setting	

● **When Using Modbus RTU Protocol**

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), even (Parity Check), 1 (Stop Bit) and 1 (PLC Station No.)

RS232 Communication

RS485 Communication

PLC Settings

● PL7 Software Setting

1   Open "Programs" menu - Select [XWAY Driver Manager] from Modicon Telemecanique:
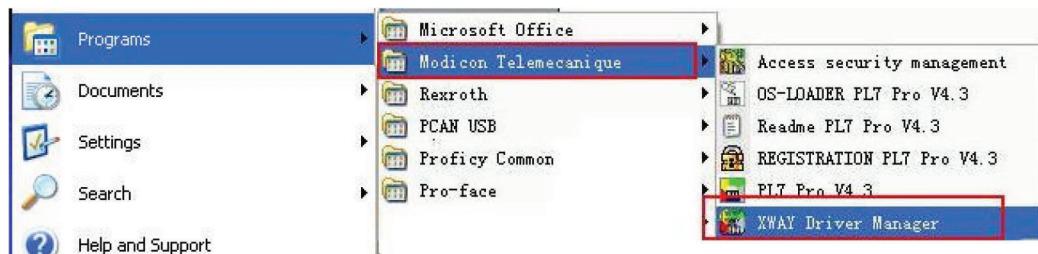

2   Select [UNITELWAY Driver] tab and push [Configuration] in the dialog box and finally select [Edit] in the following dialog box to modify the related setttings of the communications.
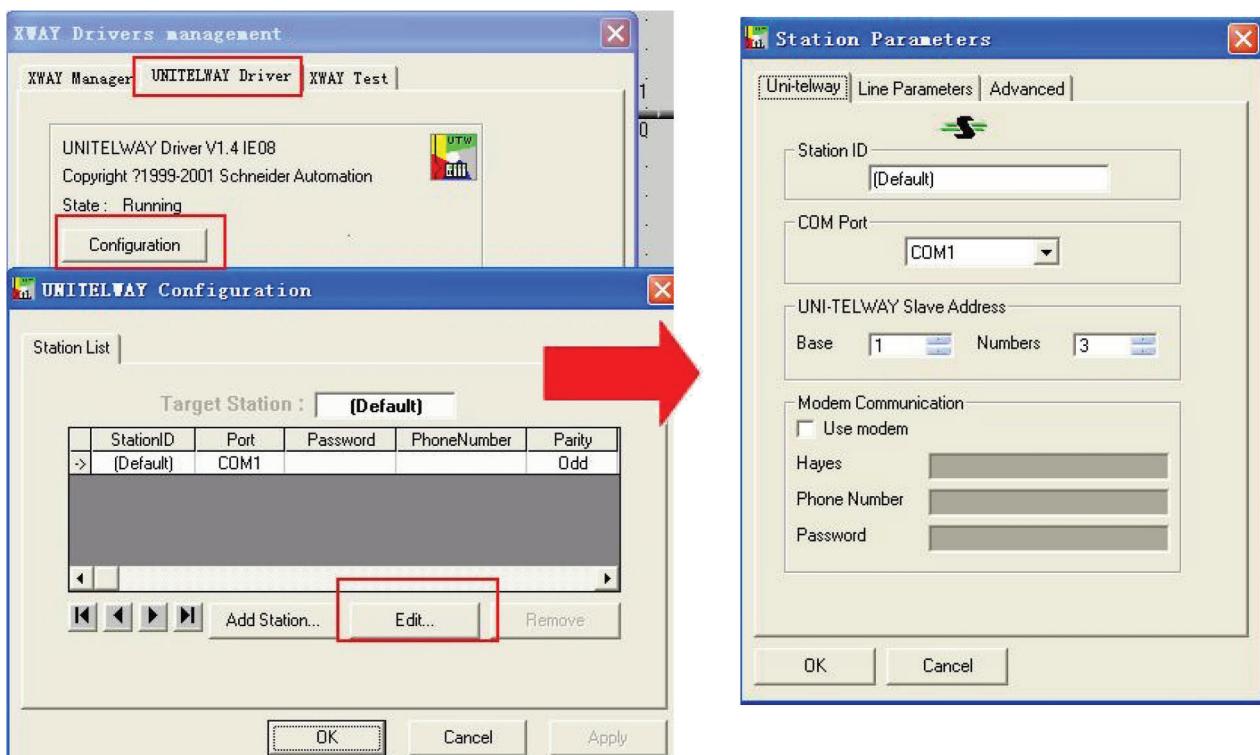

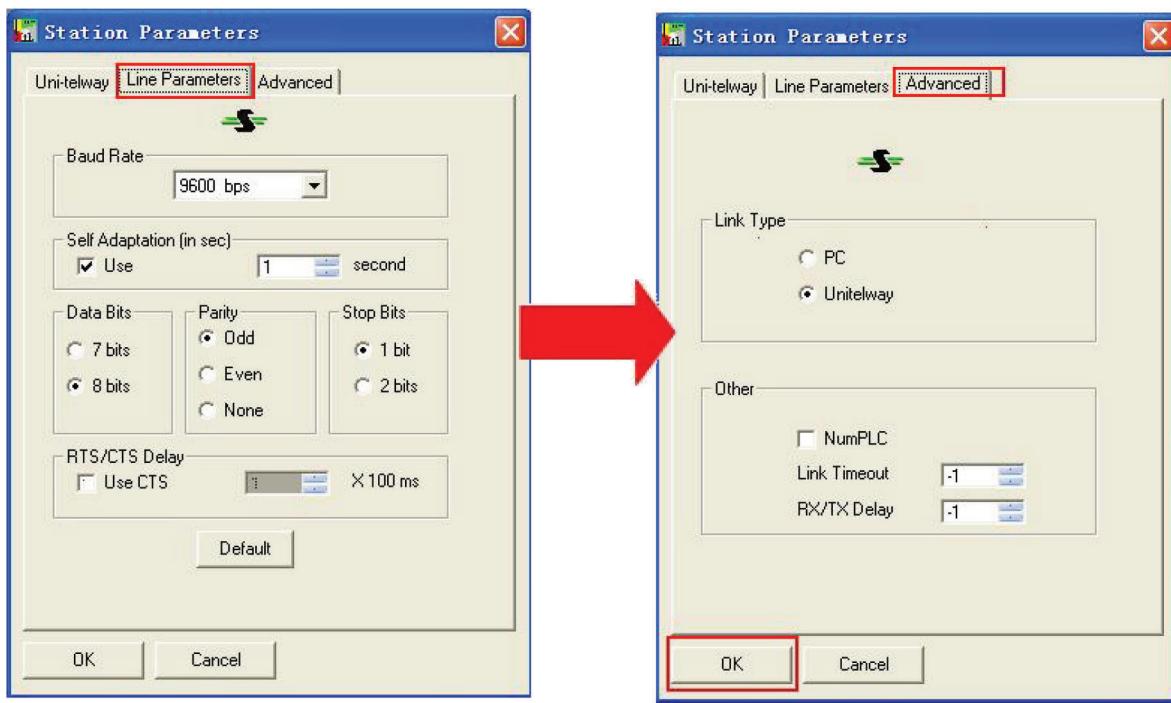

3   The following prompt information will appear after the [OK] button is clicked:
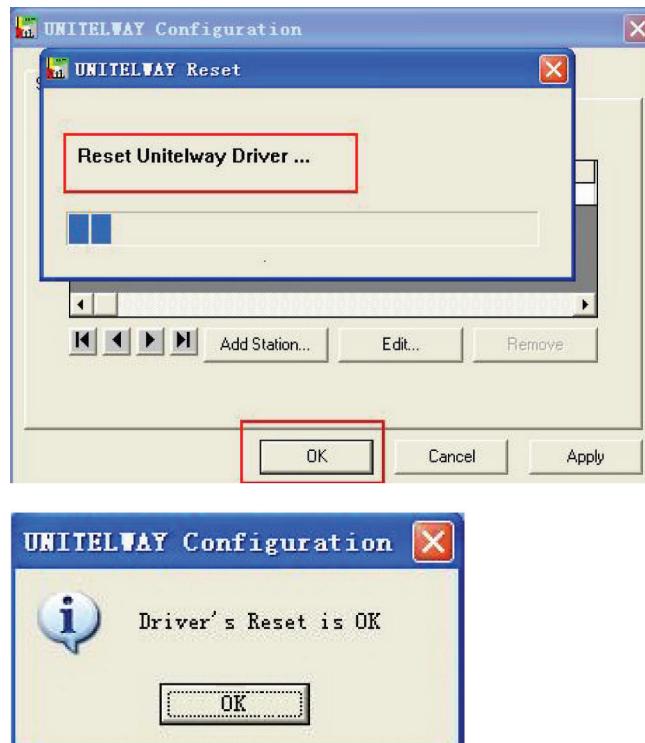

4   Click [XWAY Test]→[Connect] and the Connected prompt information will appear when the connection is successful.
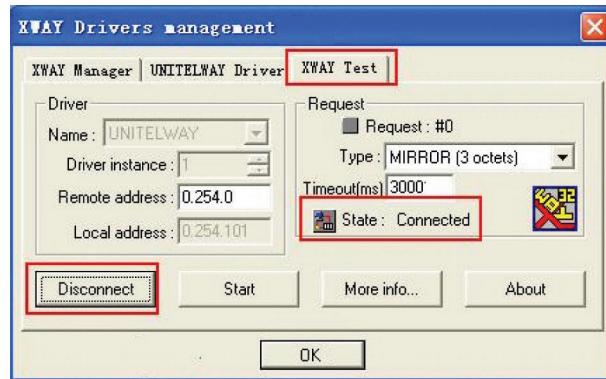

5   Open PL7 Software→New→Click [Hardware Configuration] in [STATION]→Double-click [comm] in popup window.
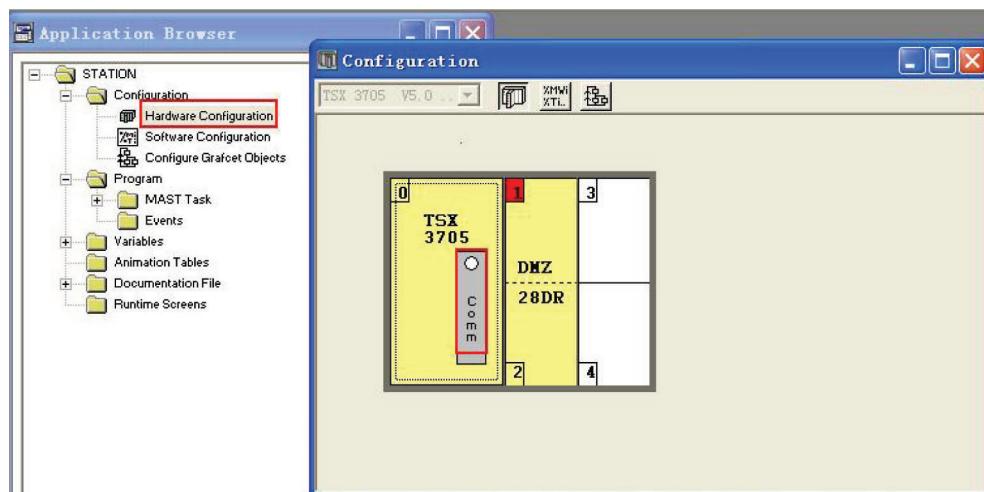

The settings are as shown below if Schneider Modicon Uni-TelWay Protocol is used:
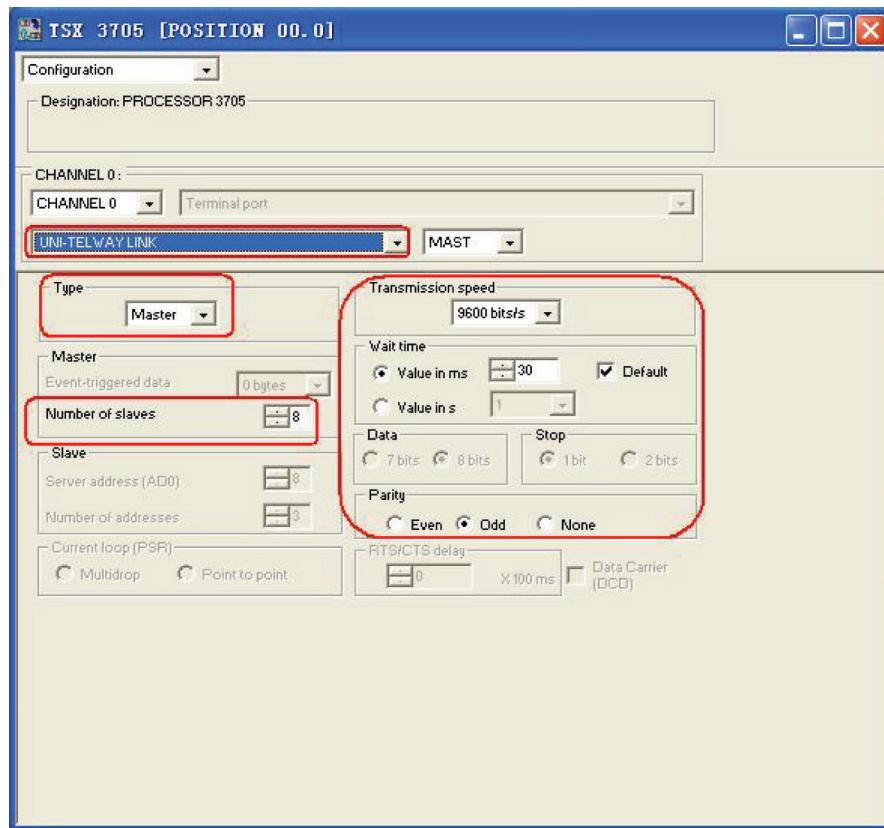

The settings are shown as below if Modbus RTU Protocol is used:
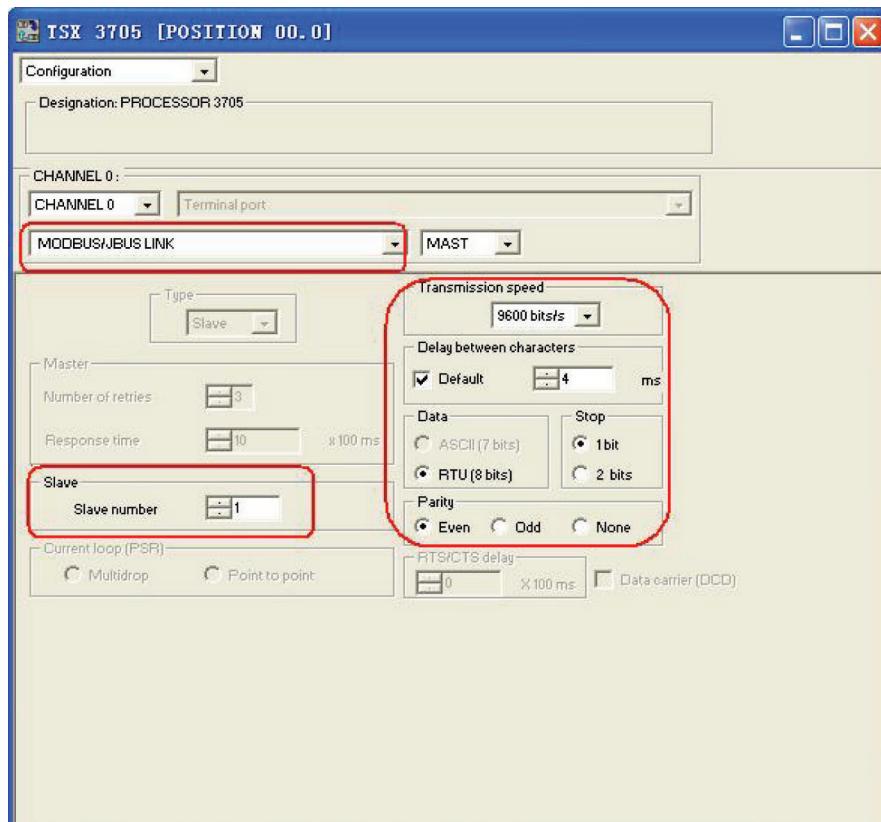

6 Download the project to PLC after the settings are completed.

PT Settings

● When Using Schneider Twido Modbus RTU Protocol

PT default communication parameters: 19200bps (Baud Rate), 8 (Data Bit), none (Parity Check), 1 (Stop Bit) and 1 (PLC Station No.)

RS485 Communication
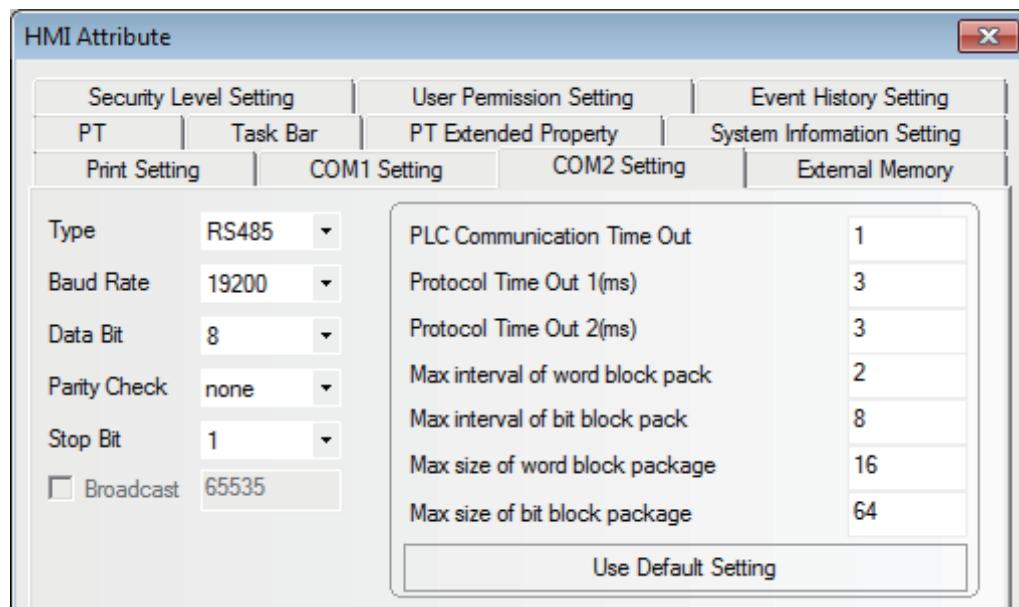

RS232 Communication
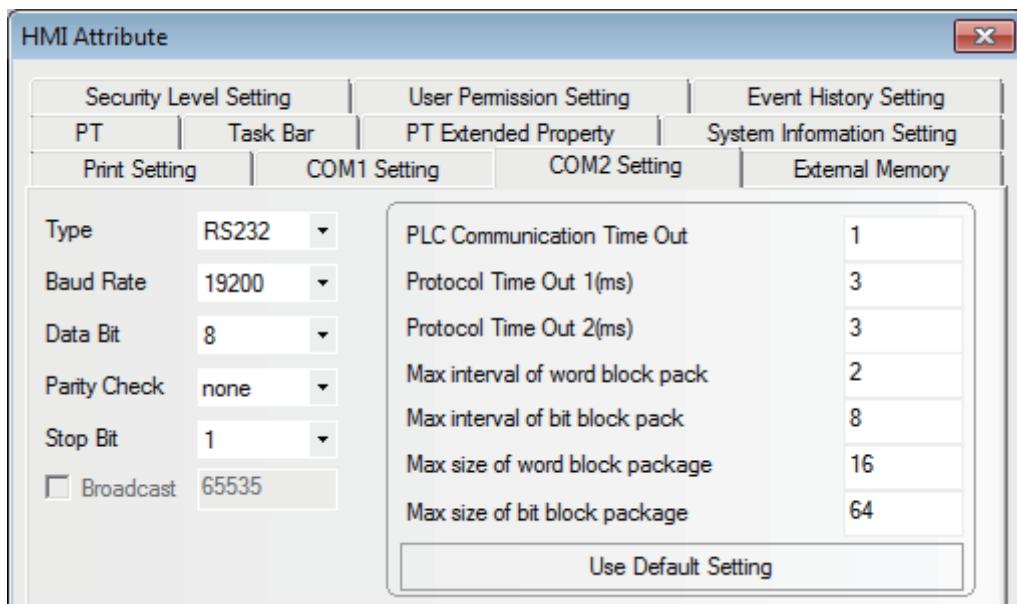

PLC Settings

● When Using Schneider Twido Modbus RTU Protocol

Note The memory addresses of Twido are under dynamic management, which may lead to communication failure when address link is available. Refer to the setting method of PLC as follows and set the words or bits correctly. It is recommended the user to add a line of ladder program in the following item of 3 to the end of the ladder program created by the user.
If the settings are mistaken, the PLC cannot communicate with the PT device.

1   Controller Communications Setup
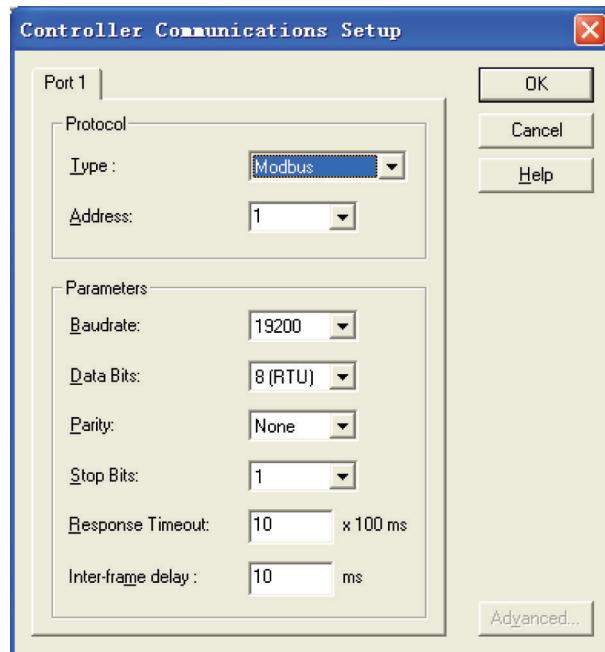

2   Expand the range of word memory address. Then change the [Auto] option in the [Assigned]
column after selecting [Controller], [Used Memory] and [Edit] to a larger variable than internal
memory and download the settings to the PLC.
It is assumed that the "Auto" is set to 3000 as shown below, all addresses before %MW3000
can perform the data swap.
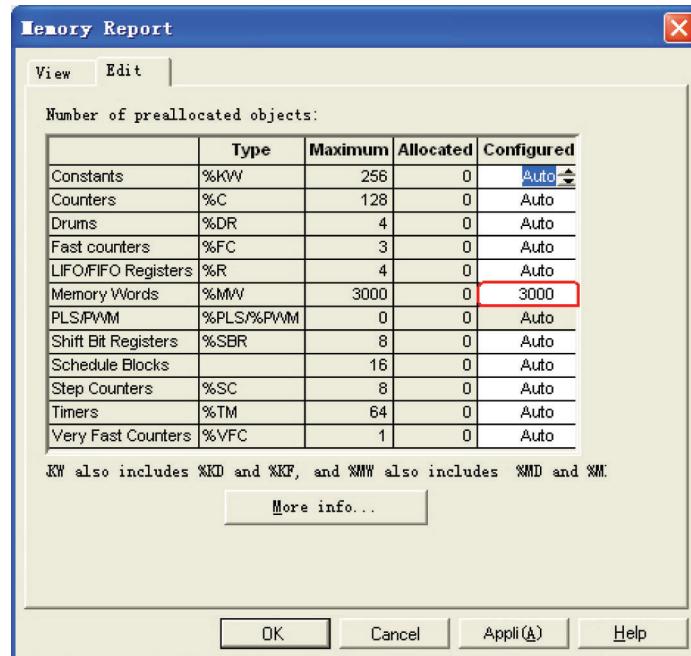

3   Extend the range of open bit address and drive the coil with a maximum address through the
programming.
It is assumed that a %M127 coil is driven as shown below, all addresses before %M127 can
perform the data swap.
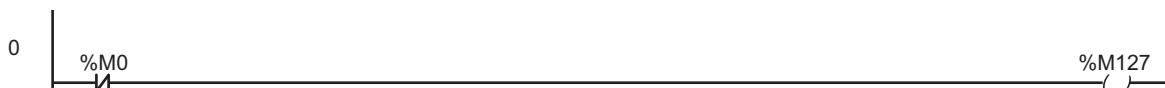

4-4   Supported Registers

Modicon TSX

Device	Bit Address	Word Address	Format	Notes
System Internal Nodes	S00000-32767	------	DDDDD	
Internal Auxiliary Nodes	M00000-32767	------	DDDDD	
Data Register Bit Nodes	MW.B0000-9999.F	------	DDDD.H	
Data Registers	------	MW0000-7999	DDDD	
Data Registers (32-bit)	------	MD0000-7999	DDDD	

Twido

Device	Bit Address	Word Address	Format	Notes
Internal Auxiliary Nodes	0X 1-9999	------	DDDD	
	1X 1-9999	------	DDDD	
	------	3X 1-9999	DDDD	
Data Registers	------	4X 1-9999	DDDD	

Note   The registers M and MW in TWIDO software correspond to 0X and 4X of PT respectively. The address offset of PT and PLC is 1.
Do not use 1X and 3X of PT for there are no registers in TWIDO software corresponding to them.
The PT address must be "PLC address + 1". For example: The M0 in PLC corresponds to 0X1 of PT.
Address format description: D: decimal, O: octonary, H: hexadecimal.

4-5   Cable Fabrication

When Using Schneider Modicon Uni-TelWay Protocol

● **RS232 Communication Cable**

Use serial port programming cable manufactured by Schneider directly to communicate with PT.

Note Direct the middle cable knob to position 2 and add a RS232 cable directly between the PT and programming cable.

● **RS485 Communication Cable**
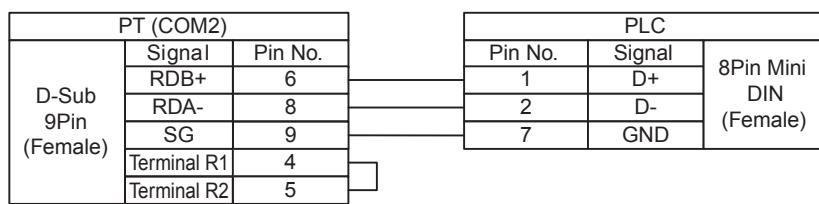

PT (COM2)				PLC		
	Signal	Pin No.		Pin No.	Signal	
D-Sub 9Pin (Female)	RDB+	6		1	D+	8Pin Mini DIN (Female)
	RDA-	8		2	D-	
	SG	9		7	GND	
	Terminal R1	4				
	Terminal R2	5				

When Using Modbus RTU Protocol

● **RS232 Communication Cable**

Use serial port programming cable manufactured by Schneider directly to communicate with PT.

Note Direct the middle cable knob to position 3

● **RS485 Communication Cable**
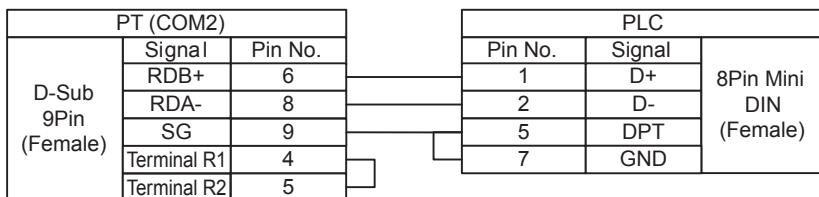

PT (COM2)				PLC		
	Signal	Pin No.		Pin No.	Signal	
D-Sub 9Pin (Female)	RDB+	6		1	D+	8Pin Mini DIN (Female)
	RDA-	8		2	D-	
	SG	9		5	DPT	
	Terminal R1	4		7	GND	
	Terminal R2	5				

When Using Schneider Twido Modbus RTU Protocol

● **RS232 Communication Cable**

Use serial port communication cable manufactured by Schneider directly to communicate with PT.

● **RS485 Communication Cable**

PT (COM2)				PLC		
	Signal	Pin No.		Pin No.	Signal	
D-Sub 9Pin (Female)	RDB+	6		1	A+	8Pin Mini DIN (Female)
	RDA-	8		2	B-	
	SG	9		5	DPT	
	Terminal R1	4		7	GND	
	Terminal R2	5				

5
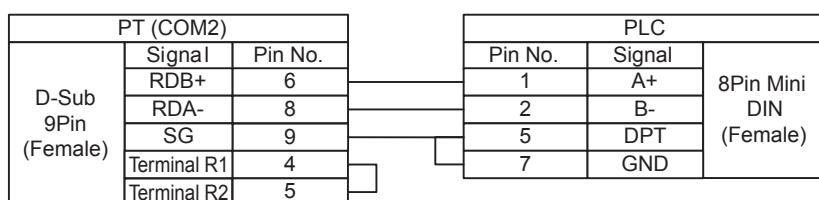

Modbus Connection

This section describes the connection on Modbus protocol.
NB□□-TW□□B and NB□□-TW□□B-V1 support different PLC models, please refer to *Section 1* for details.

5

5-1   Serial Port and Ethernet

Series	CPU	Link Module	SIO Type	Driver
Modbus RTU	Modbus Compatible External Device	RS232 on the CPU unit	-	Modbus RTU
		RS422 on the CPU unit	-	Modbus RTU Modicon_BE

Modbus RTU Extend	Multi-function Compact Inverter 3G3MX2	RS485	RS485		Self-made cable required
Modbus TCP Slave	Power PMAC Etherlite	-	Ethernet		Network cable

5-3   Communication Parameter Setting

PT Settings

● When Using Modbus RTU Protocol

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), even (Parity Check), 1 (Stop Bit) and 1 (PLC Station No.)
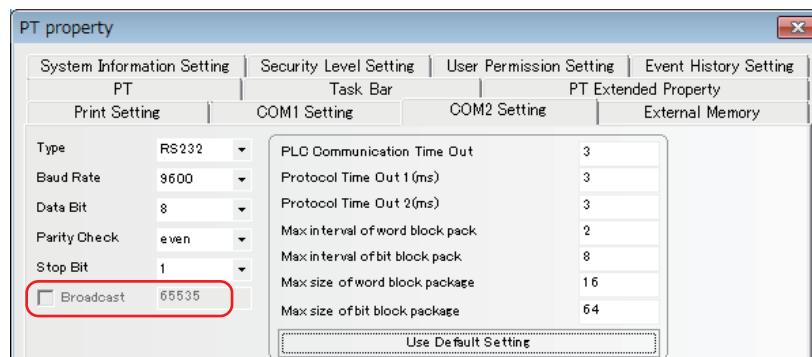

Note   Modbus RTU driver supports little-endian and Modbus RTU Modicon_BE supports big-endian.
NB's Modbus communication does not support broadcasting.

● When Using Modbus RTU Extend Protocol

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), even (Parity Check), 1 (Stop Bit) and 1 (PLC Station No.)
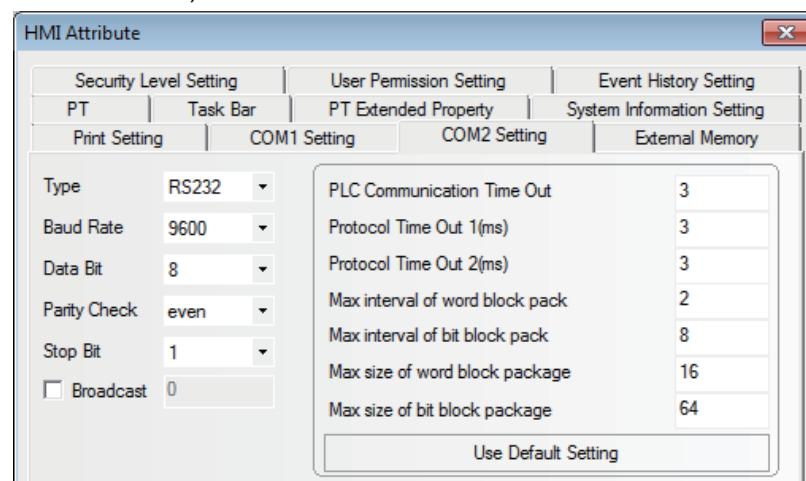

● **When Using Modbus RTU Slave Protocol**

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), even (Parity Check), 1 (Stop Bit) and 1 (PLC Station No.)
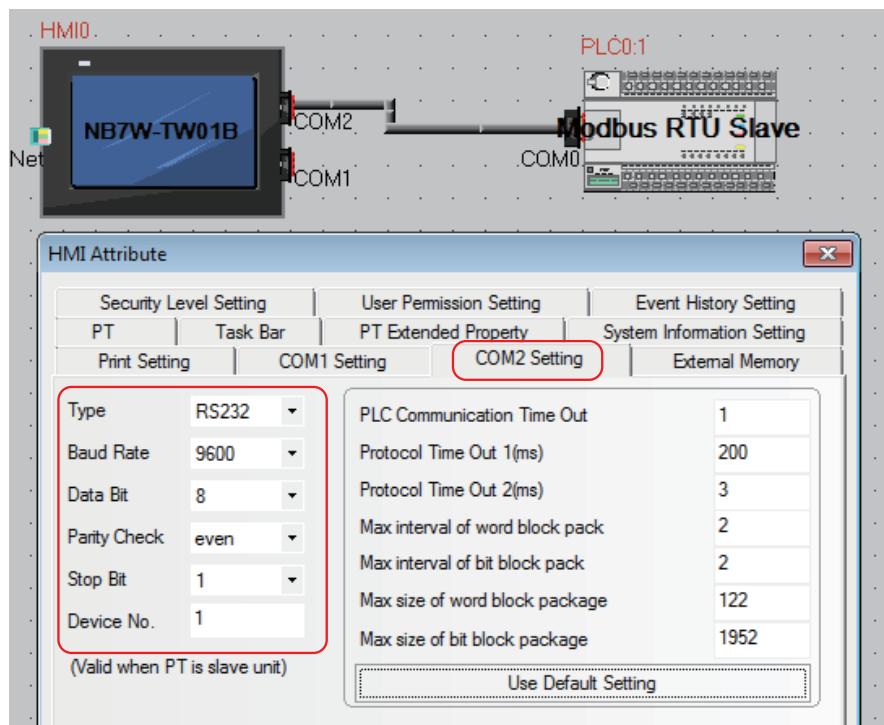

● **When Using Modbus ASCII Protocol**

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), even (Parity Check), 1 (Stop Bit) and 1 (PLC Station No.)
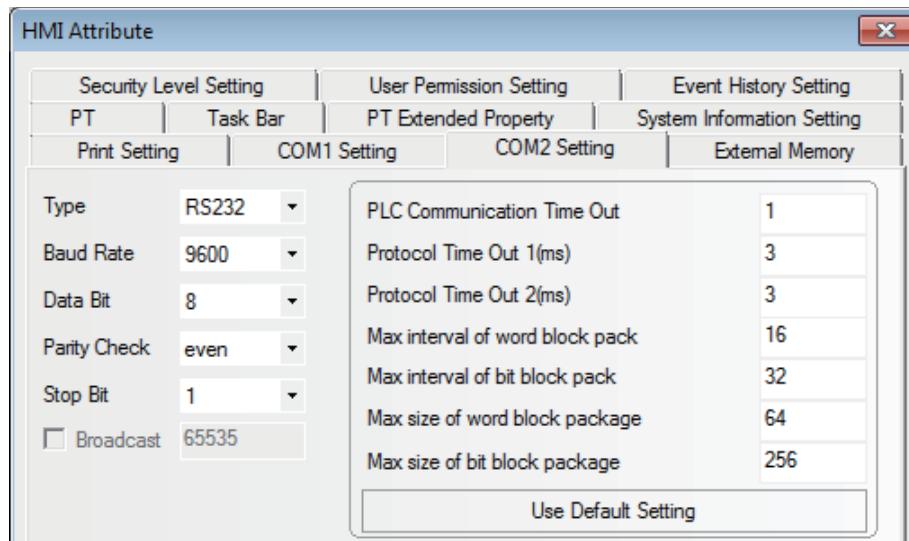

● **For communication using Modbus TCP (when PT is master)**

PT serves as the master and PLC serves as the slave.

Since the PT sends a request to the PLC, setting the PLC to be communicated with is required on the PT. The network configuration is as follows.

Device	IP Addr	Port	Protocol	Master/Slave	State NO.	Virtual...
HMI0	192.168.250.1	502	Modbus TCP	M		
PLC0	192.168.250.2	502	Modbus TCP Slave	S	1	
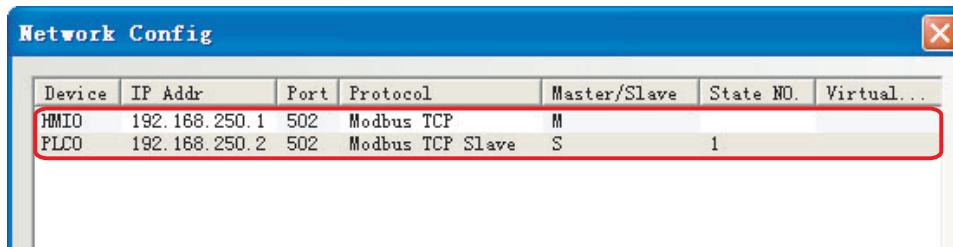

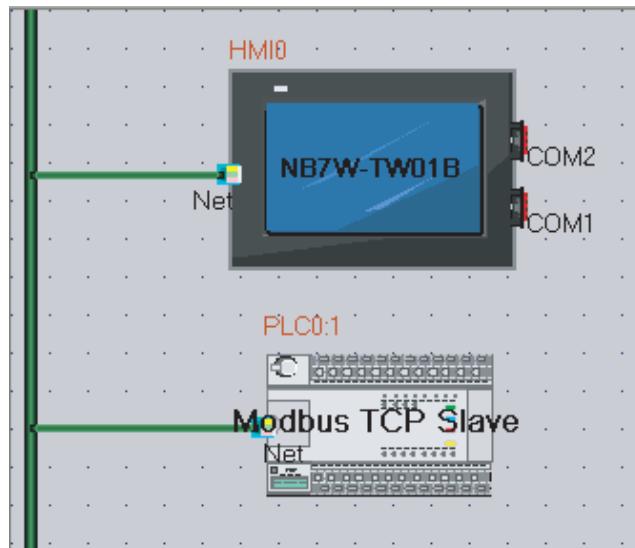

● **For communication using Modbus TCP (when PT is slave)**

PT serves as the slave and PLC serves as the master.

Since the PT waits for a request from any PLC, a PLC setting on the PT is not required. The network configuration is as follows.

Device	IP Addr	Port	Protocol	Master/...	State...	Virtual...
HMI0	192.168.250.1	502	Modbus TCP Slave	S	1	10000
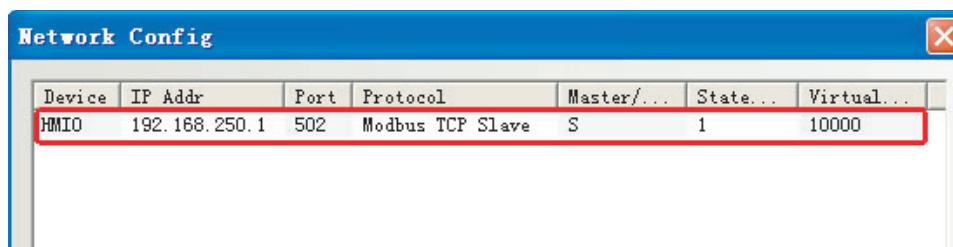

Refer to *5-7 Example of NB as Modbus Slave* for example.

5-4   Supported Registers

Modbus RTU

Device	Bit Address	Word Address	Format	Notes
System Internal/External Output Nodes	0X 1-65535	------	DDDDD	
System Internal/External Input Nodes	1X 1-65535	------	DDDDD	
Analog Input Data Registers	------	3X 1-65535	DDDDD	
Data Registers	------	4X 1-65535	DDDDD	

Modbus RTU Modicon_BE

Device	Bit Address	Word Address	Format	Notes
System Internal/External Output Nodes	0X 1-65535	------	DDDDD	
System Internal/External Input Nodes	1X 1-65535	------	DDDDD	
Analog Input Data Registers	------	3X 1-65535	DDDDD	
Data Registers	------	4X 1-65535	DDDDD	
Data Registers	------	5X 1-65535	DDDDD	
Data Registers	------	4X-DINV 1-65535	DDDDD	32 bit device
Data Registers	------	5X-DINV 1-65535	DDDDD	32 bit device

Note 1 The value which endian of 4x is reversed by the unit of Word is set to 5x.
Example: When 0x1234 is stored to 4X, 0x3412 is set to 5X.

2 The values which endian of 4X and 5X is reversed by the unit of Double Word are set to 4X-DINV and 5X-DINV, respectively.
Example: When 0x12345678 is stored to 4X, 0x56781234 is set to 4X-DINV.

Modbus RTU Extend

Device	Bit Address	Word Address	Format	Notes
System Internal/External Output Nodes	0X 1-65535	------	DDDDD	
System Internal/External Input Nodes	1X 1-65535	------	DDDDD	
Analog Input Data Nodes	3X_bit 1.00-65535.15	------	DDDDD.DD	
Data Nodes	4X_bit 1.00-65536.15	------	DDDDD.DD	
4X Single Write Data Nodes	6X_bit 1.00-65535.15	------	DDDDD.DD	
Analog Input Data Registers	------	3X 1-65535	DDDDD	
Data Registers	------	4X 1-65536	DDDDD	
Data Registers	------	5X 1-65535	DDDDD	
4X Single Write	------	6X 1-65535	DDDDD	
Data Registers	------	3X-DINV 1-65535	DDDDD	32 bit device
Data Registers	------	4X-DINV 1-65535	DDDDD	32 bit device

Note 1 The value which endian of 4X is reversed by the unit of Word is set to 5X.
Example: When 0x1234 is stored to 4X, 0x3412 is set to 5X.

2 The values which endian of 3X and 4X is reversed by the unit of Double Word are set to 3X-DINV and 4X-DINV, respectively.
Example: When 0x12345678 is stored to 3X, 0x56781234 is set to 3X-DINV.

3 When connecting to E5CC/E5EC, use 4X for the address since all addresses are handled as holding register.

Modbus RTU Slave

Device	Bit Address	Word Address	Format	Notes
System Internal/External Output Nodes	LB 0-8999	------	DDDDD	Mapping to 0x 1~9000
Data Registers	------	LW 0-8999	DDDDD	Mapping to 4x 1~9000

Modbus ASCII

Device	Bit Address	Word Address	Format	Notes
System Internal/External Output Nodes	0X 1-65535	------	DDDDD	
System Internal/External Input Nodes	1X 1-65535	------	DDDDD	
Analog Input Data Registers	------	3X 1-65535	DDDDD	
Data Registers	------	4X 1-65535	DDDDD	

Modbus TCP Slave

Device	Bit Address	Word Address	Format	Notes
System Internal/External Output Nodes	0X 1-65535	------	DDDDD	
System Internal/External Input Nodes	1X1-65535	------	DDDDD	
Analog Input Data Nodes	3X_bit 1.00-65535.15	------	DDDDD.DD	
Data Nodes	4X_bit 1.00-65535.15	------	DDDDD.DD	
Analog Input Data Registers	------	3X1-65535	DDDDD	
Data Registers	------	4X1-65535	DDDDD	
Data Registers	------	4X-DINV 1-65535	DDDDD	
Data Registers	------	3X-DINV 1-65535	DDDDD	

**Note**   Address format description: D: decimal, O: octonary, H: hexadecimal.

5-5   Cable Fabrication

● **RS232 Communication Cable**

PT (COM1/COM2)				PLC		
D-Sub 9Pin (Female)	Signal	Pin No.		Pin No.	Signal	D-Sub 9Pin
	SD	2		3	RXD	
	RD	3		2	TXD	
	SG	9		9	GND	

● **RS422 Communication Cable**

PT (COM2)				Communication expansion board or special communication adaptor		
D-Sub 9Pin (Female)	Signal	Pin No.		Signal		
	SDB+	1		RDB+		
	RDB+	6		SDB+	RS-422 connector	
	SDA-	7		RDA-		
	RDA-	8		SDA-		
	SG	9		SG		

● **RS485 Communication Cable (PLC)**

PT (COM2)				PLC		
D-Sub 9Pin (Female)	Signal	Pin No.		Signal		
	RDB+	6		SDB+/RDB+	RS-485 connector	
	RDA-	8		SDA-/RDA-		
	SG	9		SG		

● **RS485 Communication Cable (E5CC/E5EC)**

PT (COM2)				E5CC/E5EC		
D-Sub 9Pin (Female)	Signal	Pin No.		Signal		
	RDB+	6		B(+)	RS-485 connector	
	RDA-	8		A(-)		

● **RS485 Communication Cable (3G3MX2)**

PT (COM2)				3G3MX2		
D-Sub 9Pin (Female)	Signal	Pin No.		Signal		
	RDB+	6		RS+	RS-485 connector	
	RDA-	8		RS-		

Precautions for Correct Use

For RS422/485, a terminating resistance short circuit is required. A short-circuit may depend on an NB model. Thus, please refer to *1-2 Part Specifications* in the *NB-series Programmable Terminals Setup Manual* (Cat. No. V107).

● **Ethernet Communication Cable**

Use Twisted Pair Cable to connect. Refer to *Ethernet communication specifications* in *A-1-3 Communication Specifications* in the *NB-series Programmable Terminals Setup Manual* (Cat. No. V107).

5-6   Modbus Protocol

5-6-1   Introduction to Modbus Protocol

Modbus functions as a request-response protocol which provides the service specified by function codes.

Modbus protocol such as ASCII, RTU, and TCP does not specify the physical layer, but defines the message frame and is available to communicate with the Controllers through varied networks. In ASCII mode and RTU mode, the protocol is composed of the each combination of message and data, or command and response. The data communications of Modbus adopt master-slave mode. In the mode, first of all, the master sends a message and the slave receives the message, followed by the slave replies the data to the request by the master.

As the master can also send the data directly to the slave to change the data of the slave, that means the master and the slave can perform bidirectional read and write.

When the PTs of NB series performs the communications following the Modbus protocol, it is performed in accordance with Modbus communications procedure.

Common format of message frame is shown as follows.

Address code	Function code	Data area	Error checking code
8 bits	8 bits	N × 8 bits	16 bits

● Address code

Data field of the message frame is two characters when the transmission mode is ASCII and eight bits when it is RTU. Addresses of the slave are ranged from 0 to 247 (written by decimal) and addresses of each device are allocated from 1 to 247. The master device select the slave device through the data field of the message in which the addresses of the slave communicating with the master are stored. When the slave replies the message, in order to recognize which slave replied to the message, the addresses replied from the slave are stored in the data field of the response message. Address 0 is used as a broadcast address which can be recognized by all the slave devices.

● Function code

Modbus Function Code	Name	Function	Corresponding Address Type
01	Read coil status	Reads the bit data (N bits)	0x
02	Read input discrete value	Reads the bit data	1x
03	Read multiple registers	Reads the integer type/character type/status word /floating-point data (N words)	4x
04	Read input registers	Reads the integer type/status word/ floating-point type data	3x
05	Write single coil	Writes the bit data (one bit)	0x
06	Write single register	Writes the integer type/character type/status word /floating-point data (one word)	4x
15	Write multiple coils	Writes the bit data (N bits)	0x
16	Write multiple registers	Writes the integer type/character type/status word /floating-point data (N words)	4x

The read/write function codes corresponding to each mode are as follows:

Mode / Function	Modbus RTU, Modbus RTU Extend, Modbus RTU Slave, Modbus ASCII		Modbus TCP	
	Bit	Word	Bit	Word
Read	01, 02	03, 04	01, 02*	03, 04*
Write	05, 15	06, 16	05, 15	06, 16

* This function code is not supported when the PT operates as the slave.

● **Data area**

The data area includes the required data from PT or replied data from the devices such as variables, referred addresses, and setting values. For instance, when the PT is informed of memory read by the function code, which memory and which area of the memory should be read are necessary to be specified in the data field. The specified addresses and data type are varied according to the slave specifications.

● **Error checking code**

Modbus protocol checks if the message frame could be received correctly. Besides the parity check of serial protocol, it is checked using LRC in ASCII mode or 16 bits CRC in RTU mode. In TCP mode, only parity check is performed.

5-6-2   When NB adopts Modbus TCP protocol (Master/Slave mode)

When the PLC and the PT are connected via the Modbus protocol, 2 situations exist depending on the master and slave statuses of the devices.

Method	Mater/Slave	Protocol used	Descriptions
1	PT as the master	Modbus TCP	The PT accesses the 0X, 1X, 3X and 4X registers mapped out by the PLC.
	PLC as the slave	Modbus TCP Slave	
2	PT as the slave	Modbus TCP Slave	The PT local address LW is mapped as the 4X register, and the LB as the 0X register.
	PLC as the master	Modbus TCP	

(1) PT is the master and PLC is the slave

The PT as the master and the PLC as the slave communicate through the Modbus TCP protocol. The PLC is operated in slave mode of Modbus TCP protocol, and also performs mapping on the 0X, 1X, 3X and 4X registers (hereof, the 0X and 1X are bit registers, and the 3X, while 3X and 4X are word registers.)

(2) PLC is the master, and PT is the slave

The PLC as the master and the PT as the slave communicate through the Modbus TCP protocol. The PLC is operated as the master in the Modbus TCP protocol. The PT performs mapping LB on the 0X and LW on the 4X registers. These addresses can be written and read by the PLC.

The corresponding relations of the registers are as below:

Modbus register address range	The corresponding PT local address range
0X(1---9000)	LB(0---8999)
4X(1---9000)	LW(0---8999)

5-7   Example of NB as Modbus Slave

Communication by Modbus RTU Slave protocol
System description: Use CP1E-N30D□-□ (30-point I/O type) as Modbus master and an NB Unit as Modbus slave to perform the communication.

PLC Setting

CP1E-N30D□-□ should connect to CP1W-CIF11 module functioning as RS485 communication port.

Use CX-Programmer to configure the peripheral port.

Make the communication settings as follows: 9600, 8, 1, Even and Modbus-RTU simple master.
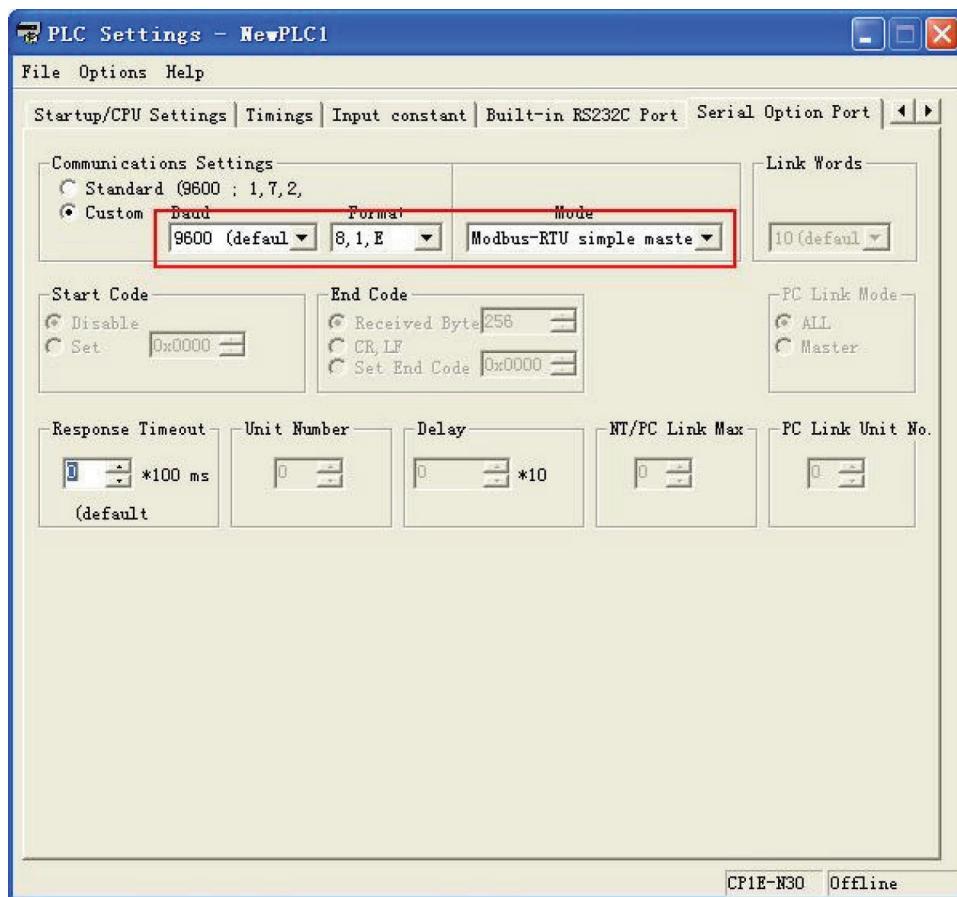

NB Unit Setting

We take one NB7W-TW00B as example with the system configuration as shown below:
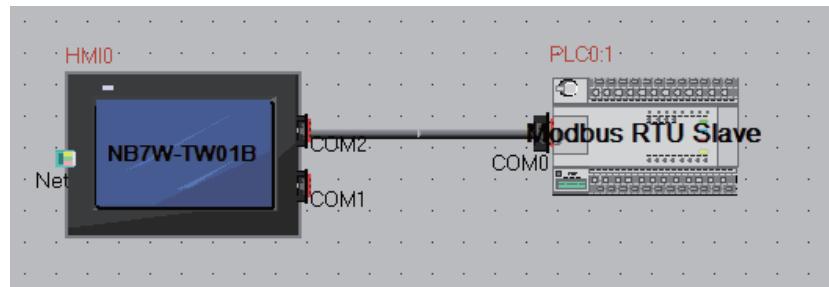

NB7W-TW00B communication settings: 9600 (Baud Rate), 8 (Data Bit), 1 (Stop Bit), Even (Parity Check) and 1 (device No.), as shown below:
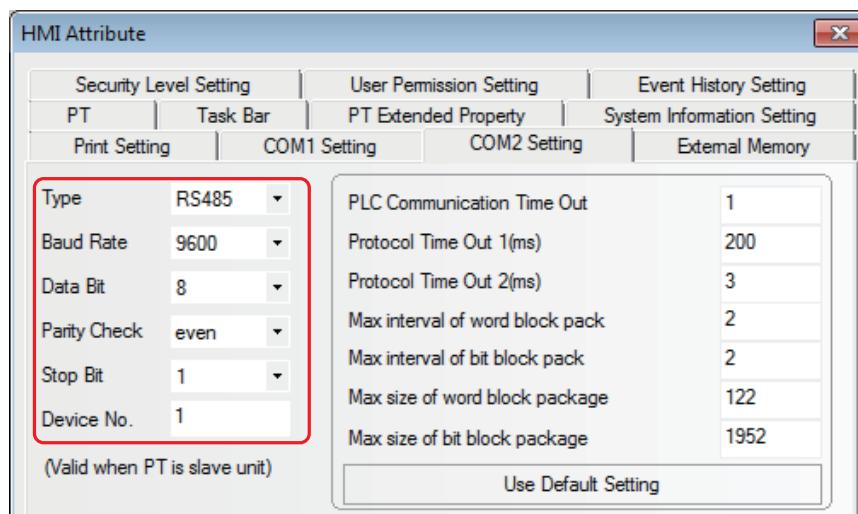

Cable Fabrication

5-8   Example of connection using Modbus TCP protocol

Use Modbus TCP protocol to perform the communication, PT serving as the slave.

PLC Setting

Since Modbus TCP is a general purpose protocol, setting method differs depending on the PLC. Please confirm the setting of PLC used before making the settings.

PLC produced by Schneider is used in this section as an example.

Make the settings for Schneider PLC which supports Modbus TCP protocol as follows.
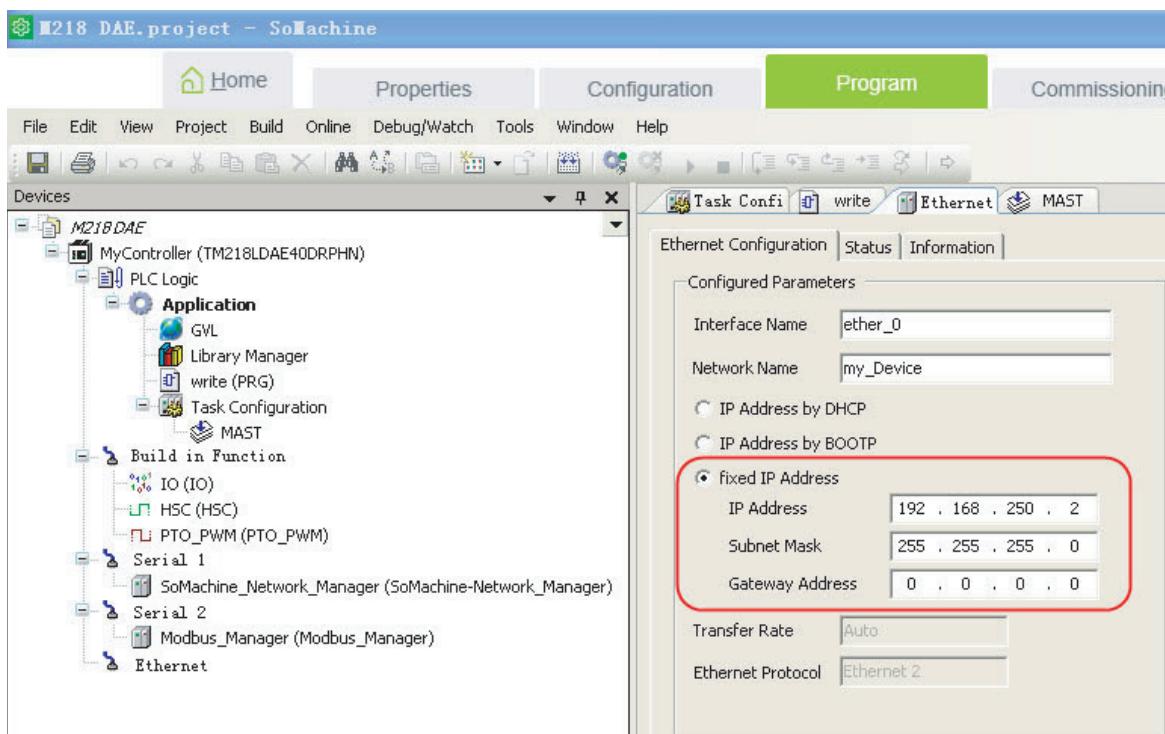

PT Setting

For the details on network configuration, refer to "When Using Modbus TCP Protocol" in *5-3 Communication Parameter Setting*.

5-9   Example of E5CC/E5EC, 3G3MX2 connection using Modbus RTU Extend Protocol

Unit Setting

Connect with the NB using RS485 communication port.

Set or check Baud Rate, Data Bit, Parity Check and Stop Bit using the operator came with the unit.

Make sure the communication setting of NB unit and the temperature controller or the inverter corresponds.

NB Communication Setting

We take NB7W-TW01B as example with the configuration and setting as shown below:
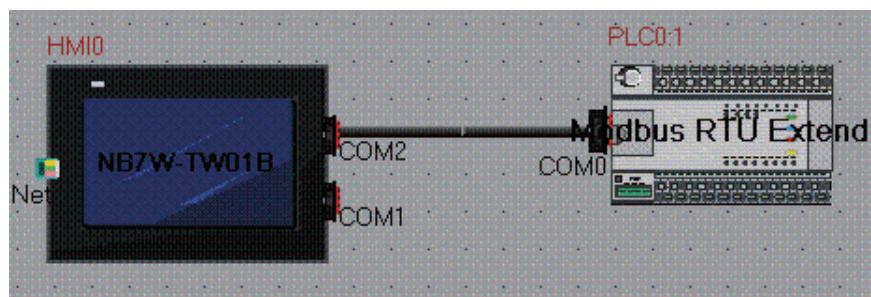

An example of COM2 setting in PT communication setting is shown below: 9600 (Baud Rate), 8 (Data Bit), 1 (Stop Bit), Even (Parity Check)

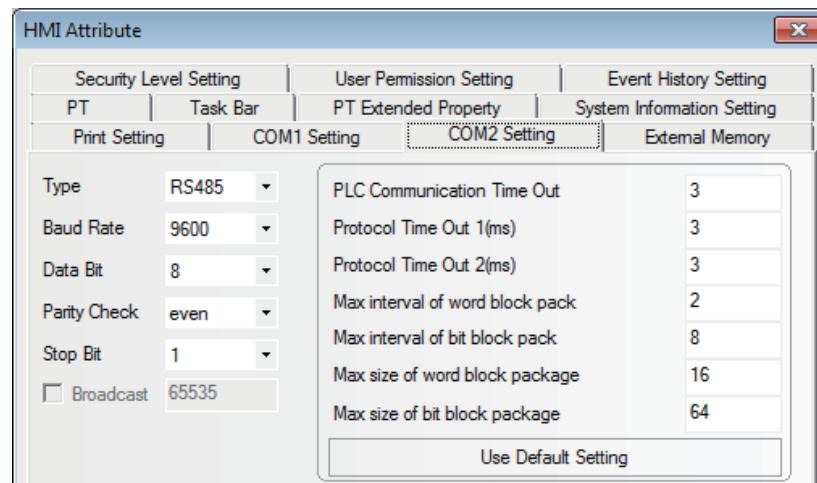

Precautions for Correct Use

Proper setting for Max interval of word block pack and so on depends on the connected device. Make sure to refer to the manuals of the connected device for proper setting.

Precautions for Correct Use

- An address is written in hexadecimal in *E5□C Digital Temperature Controllers COMMUNICATION MANUAL* (Cat. No. H175) or *SYSDRIVE MX2 Series Multi-function Compact Inverter USER'S MANUAL* (Cat. No. I570) but needs to be input in decimal in NB-Designer.

- Also, the top address starts with 0 in *E5□C Digital Temperature Controllers COMMUNICATION MANUAL* (Cat. No. H175) or *SYSDRIVE MX2 Series Multi-function Compact Inverter USER'S MANUAL* (Cat. No. I570) but needs to be changed by converting it from hexadecimal to decimal and adding one for input in NB-Designer. An address has to start with 1 in NB-Designer.

- When connecting to E5CC/E5EC, 2 byte mode address appoint method should be used. Moreover, Use the addresses 2406 - 2407 for the status address with data length of 32 bit. Data cannot be handled properly when the address 2001 is used.

- 3G3MX2 cannot access parameters with double word.

- 3G3MX2-V1 can access only low-order word of parameters with double word by using Modbus mapping function. For details, please refer to *SYSDRIVE MX2 Series Multi-function Compact Inverter USER'S MANUAL* (Cat. No. I570).

- When connecting to E5CC/E5EC or 3G3MX2, more than 1 of Unit No. should be used.

5   Modbus Connection

5-10 Example of Power PMAC Motion Controller using Modbus TCP Slave Protocol

The NB communicates with the Power PMAC using the Ethernet communication port via the Modbus TCP Slave protocol with the PT designated as a master unit. Therefore, the communication settings between the NB and the Power PMAC must be consistent. This section describes an example of the settings.

● **System Configuration**

Following is an example of configuration and settings when Model NB7W-TW01B is used:

● **PT Settings**

Perform the NB communication settings as described below:

5-18   NB-series Programmable Terminals Host Connection Manual (V108)

● **Power PMAC Settings**

Perform the Power PMAC settings as described below:

In addition, add the following item to the "global definitions.pmh" file on the Power PMAC IDE tool to make the Power PMAC operate as the Modbus TCP slave unit.

Sys.ModbusServerEnable = 1

5
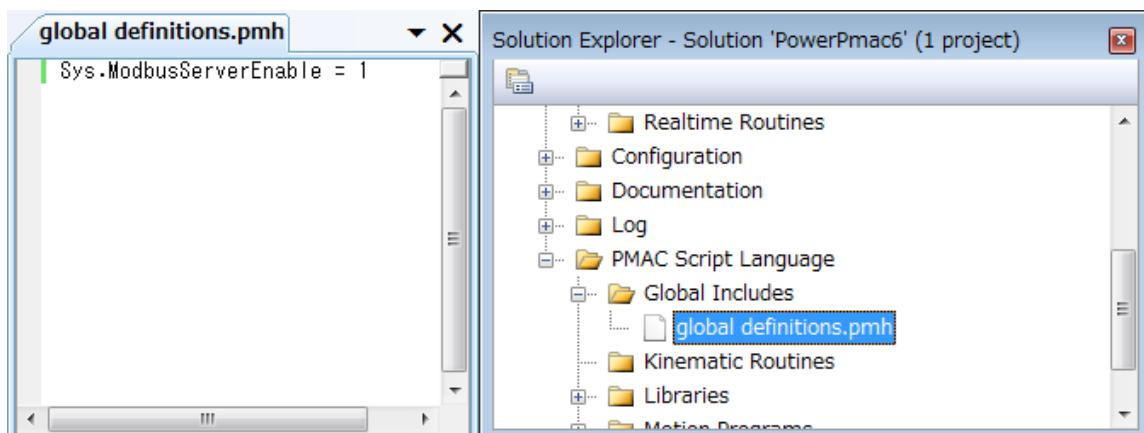

● **Address Mapping**

The data on the Power PMAC are managed as variables. By enabling the Modbus TCP slave function on the Power PMAC side, the Modbus addresses are automatically linked with those of the variables on the Power PMAC. The following table shows the address correspondence between PMAC and Modbus.

PMAC variables	Address range	Modbus addresses	Address range
I variable	I0-6143	4X-DINV	4098-16384
M variable	M0-8191	4X-DINV	16386-32768
P variable	P0-8191	4X-DINV	32770-49152
Q variable	&0 Q0-1023	4X-DINV	49154-51200

Note that all the Power PMAC variables are handled in the 32-bit floating-point representation, and that NB therefore must read/write data in units of 32 bits. Beware that the functions that cannot handle the 32-bit floating-point format are not available.

In addition, the Power PMAC, by default, sends data with the 16 high bits and the 16 low bits switched. Thus, for the Modbus address, you must use the DINV area.

📝 **Precautions for Correct Use**

To make communication efficient, the NB exchanges as a batch the data of the length according to the values specified in "Max size of word block package". For example, when addresses 4X-DINV 00001, 4X-DINV 00008, and 4X-DINV 00016 exist on the screen while this is set to 16, the NB obtains 4X-DINV 00001 through 4X-DINV 00016 as a batch.

However, the Power PMAC does not support communication of the data that extend across different variables. Therefore, be careful of the following points.

When assigning multiple variables on a single screen, make sure that the range specified by "Max size of word block package" does not include more than one address.

　　Example of correct settings:

　　　　Address set for Object 1: I6143(4X-DINV 16384)

　　　　Address set for Object 2: M200(4X-DINV 16786)

　　Example of erroneous settings:

　　　　Address set for Object 1: I6143(4X-DINV 16384)

　　　　Address set for Object 2: M2(4X-DINV 16390)

To freely set addresses, set "Max size of word block package" to "2". Note, however, that when you perform the above setting, the amount of communication becomes large, which will affect performance. Confirm the performance before moving on to actual operations.

6

Connecting to Delta PLCs

This section describes the connection to Delta PLCs

6

6-1   Serial Port Communication

Series	CPU	Link Module	Driver
DVP	DVP-XXES/EX/SS DVP-XXSA/SX/SC DVP-XXEH/EH2/SV	RS232 on the CPU unit	Delta DVP
		RS485 on port	

6-2   Communication Parameters and Cable Fabrication

Series	CPU	Link Module	COMM Type	Parameter	Cable
DVP	DVP-XXES/EX/SS DVP-XXSA/SX/SC DVP-XXEH/EH2/SV	RS232 on the CPU unit	RS232	Refer to Section 6-3	Self-made cable required
		RS485 on port	RS485		

6-3   Communication Parameter Setting

PT Settings

PT default communication parameters: 9600bps (Baud Rate), 7 (Data Bit), even (Parity Check), 1 (Stop Bit) and 1(PLC Station No.)

RS232 Communication
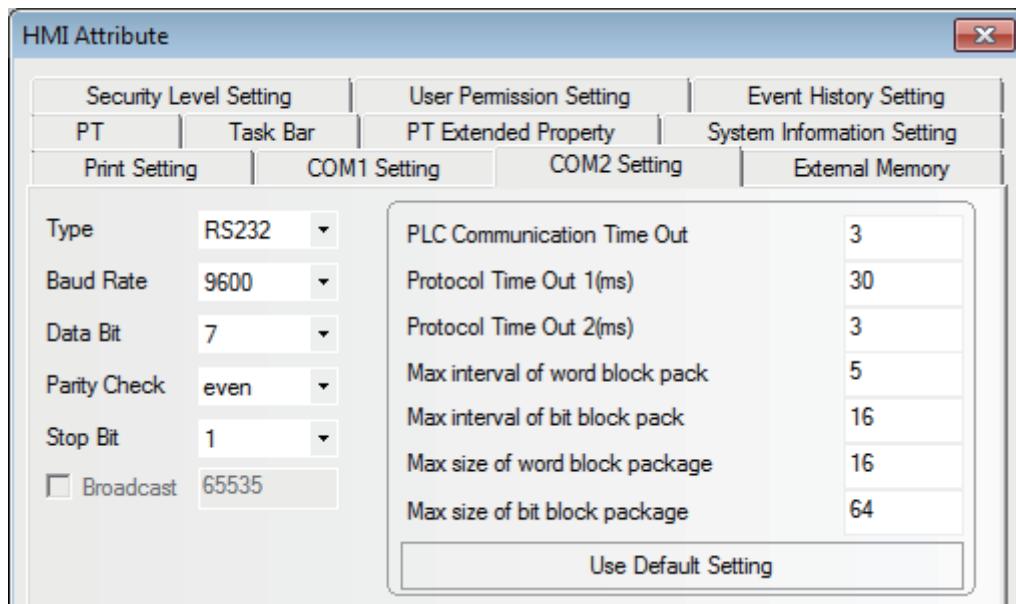

RS485 Communication
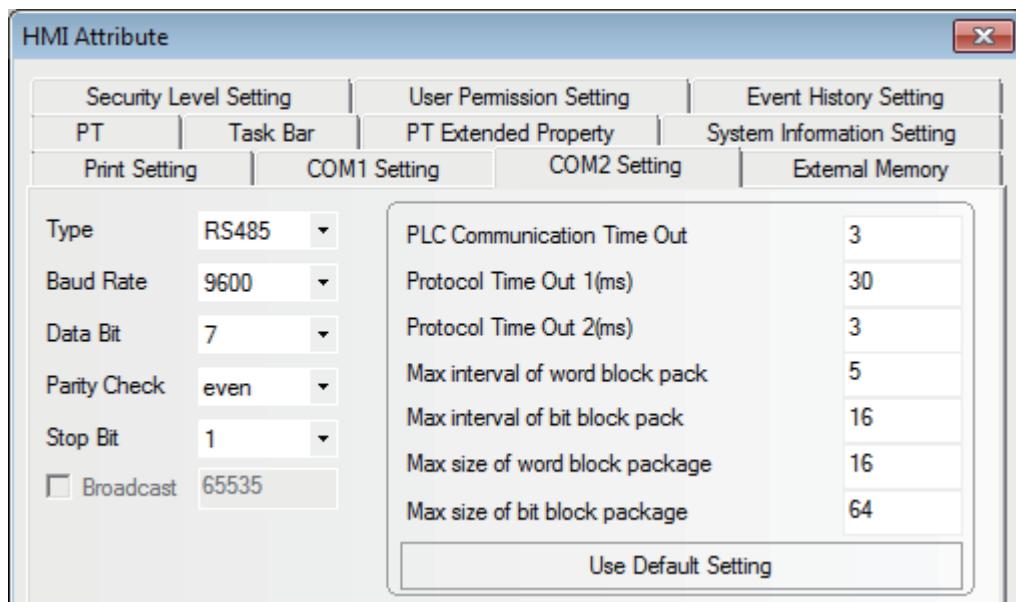

Note   The communication parameters should be set through modification of D1120 value when RS485 communication is used.

PLC Settings

1   You can check the baud rates equivalent to the value of D1120 in the dialog box, "RS-485 Protocol Setting (D1120)" after selecting [Help] menu in the Wpl207 software, and [Auxiliary Editing] in the "Help" in the Wpl207 software.
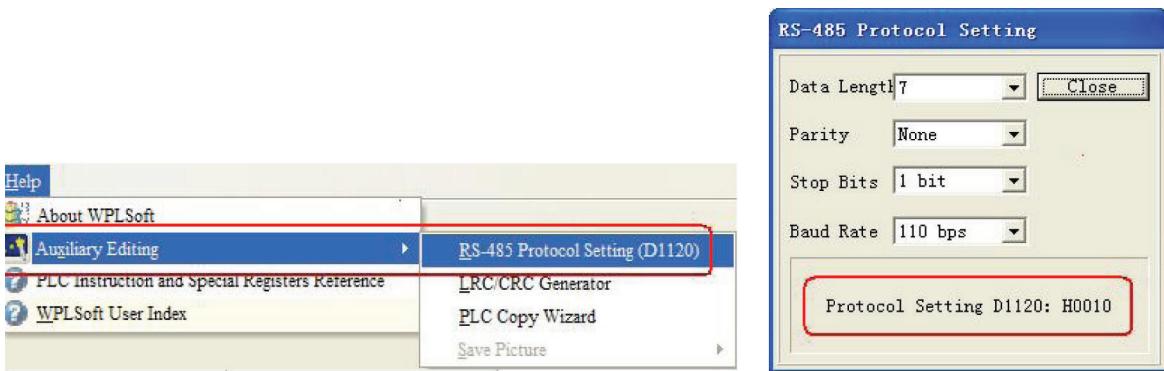

2   Monitor and modify the value of D1120 after PLC is connected to Wpl207.

For example: If the communication parameters are 110bps (Baud Rate), 7 (Data Length), None (Parity) and 1 bit (Stop Bits), then D1120=H0010 (Protocol Setting).

6-4   Supported Registers

Device	Bit Address	Word Address	Format	Notes
External Input Nodes	X0-23417	------	OOOOO	
External Output Nodes	Y0-23417	------	OOOOO	
Internal Auxiliary Nodes	M0-9999	------	DDDD	
Sequence Control Nodes	S0-9999	------	DDDD	
Timer Nodes	T0-9999	------	DDDD	
Counter Nodes	C0-9999	------	DDDD	
Timer Buffers	------	TV0-9999	DDDD	
Counter Buffers	------	CV0-127	DDD	
Counter Buffers (double-word, 32-bit)	------	CV2 232-255	DDD	
Data Registers	------	D0-9999	DDDD	

Note Address format description: D: decimal, O: octonary, H: hexadecimal.

6-5   Cable Fabrication

		Built-in RS-485	RS485		
XEC	XEC-DN60SU	Built-in RS-232C	RS232		
		Built-in RS-485	RS485		

7-3 Communication Parameter Setting

PT Settings

● When Using LS Master-K Cnet Protocol

PT default communication parameters: 38400bps (Baud Rate), 8 (Data Bit), none (Parity Check), 1 (Stop Bit) and 1(PLC Station No.)

RS232 Communication
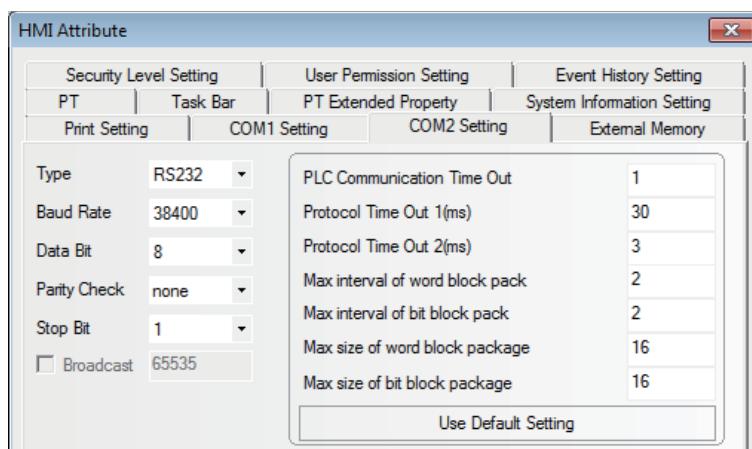

RS485 Communication
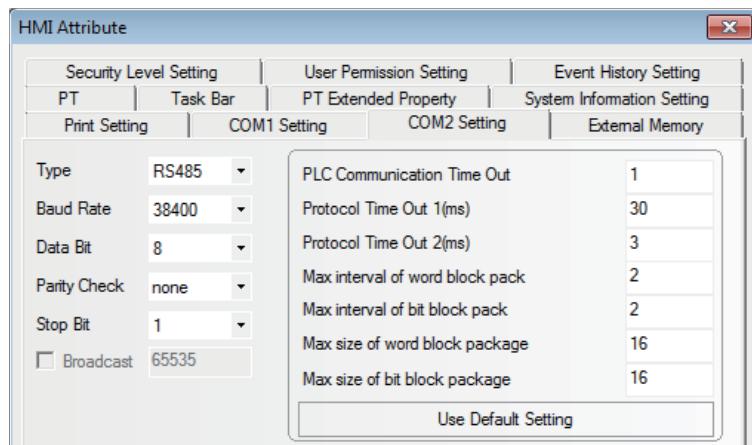

● When Using LS Master-K CPU Direct Protocol

PT default communication parameters: 38400bps (Baud Rate), 8 (Data Bit), none (Parity Check), 1 (Stop Bit) and 1 (PLC Station No.)

RS232 Communication
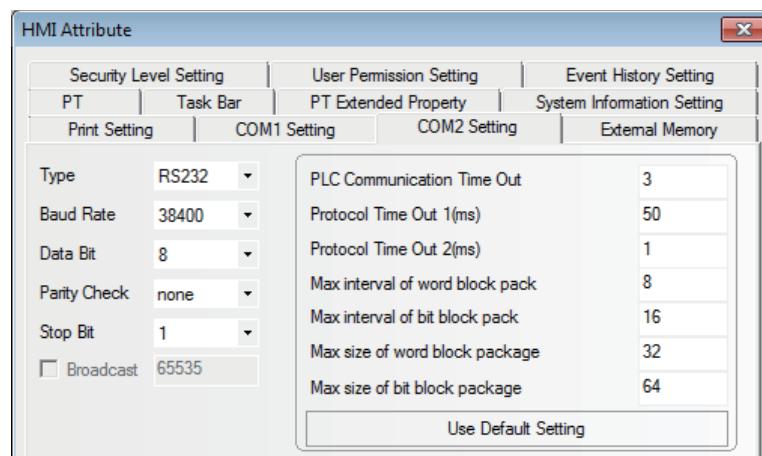

Note LS Master-K CPU Direct protocol only supports communication speed of 38400bps.

● **When Using LS Master-K Modbus RTU Protocol**

PT default communication parameters: 38400bps (Baud Rate), 8 (Data Bit), none (Parity Check), 1 (Stop Bit) and 1 (PLC Station No.)

RS232 Communication
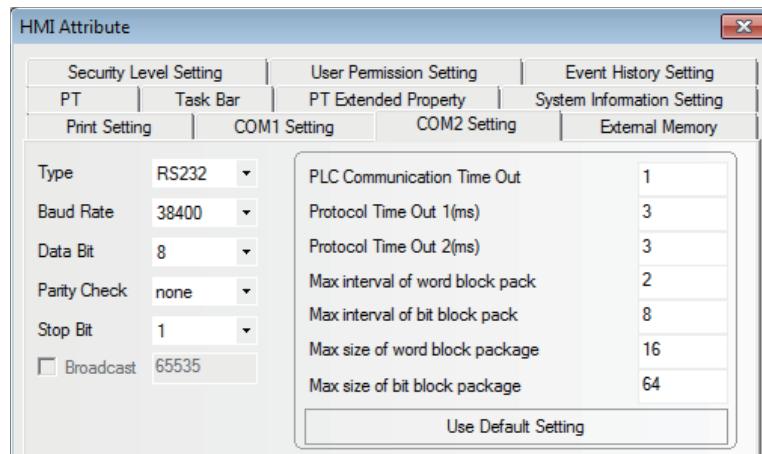

● **When Using LS XGT CPU Direct Protocol**

PT default communication parameters: 115200bps (Baud Rate), 8 (Data Bit), none (Parity Check), 1 (Stop Bit) and 0 (PLC Station No.)

RS232 Communication
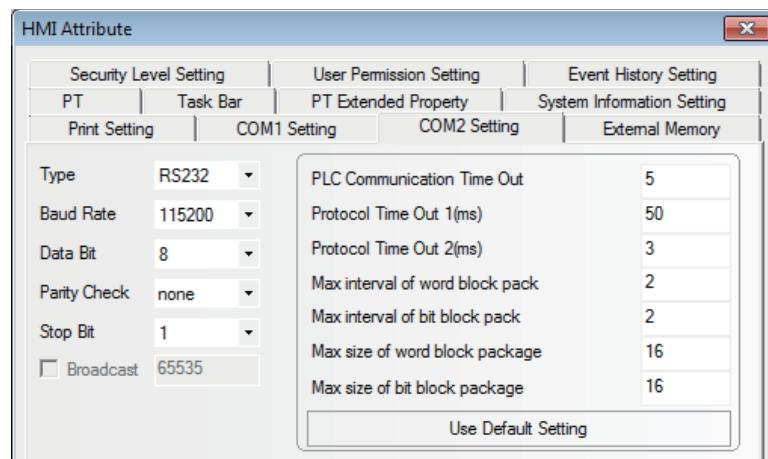

Note LS XGT CPU Direct protocol only supports communication speed of 115200bps and the Multiple Station No. is not supported.

● **When Using LS XGT Cnet Protocol**

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), none (Parity Check), 1 (Stop Bit) and 0 (PLC Station No.)

RS232 Communication
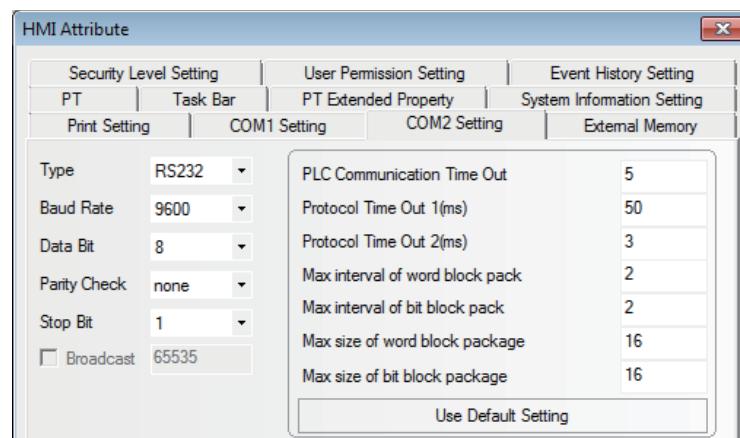

RS485 Communication
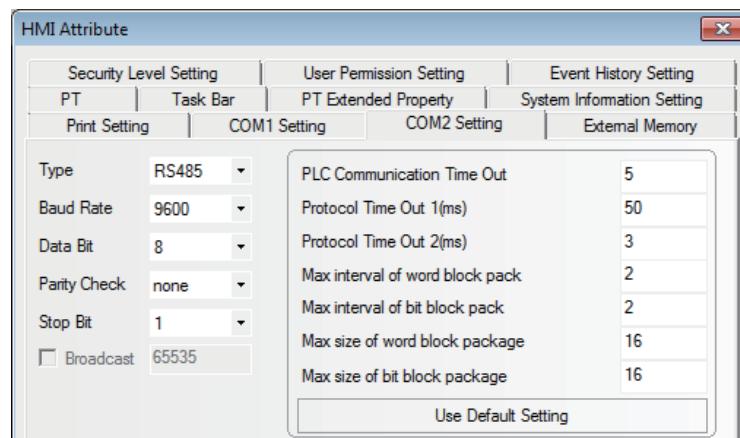

● **When Using LS XEC Cnet Protocol**

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), none (Parity Check), 1 (Stop Bit) and 0 (PLC Station No.)

RS232 Communication
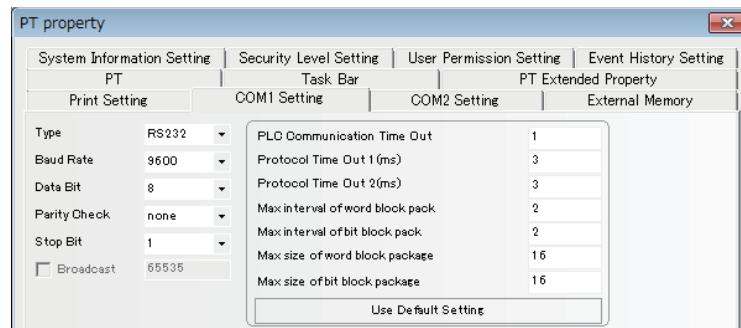

RS485 Communication
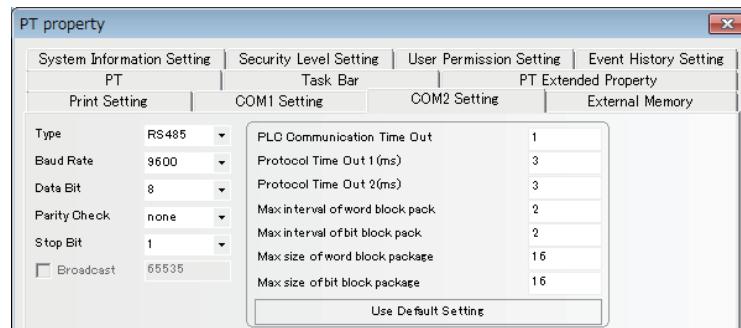

PLC Settings

● **When Using LS Master-K Cnet Protocol**

The software settings are as shown below (Please pay attention to the settings encircled by red line.):
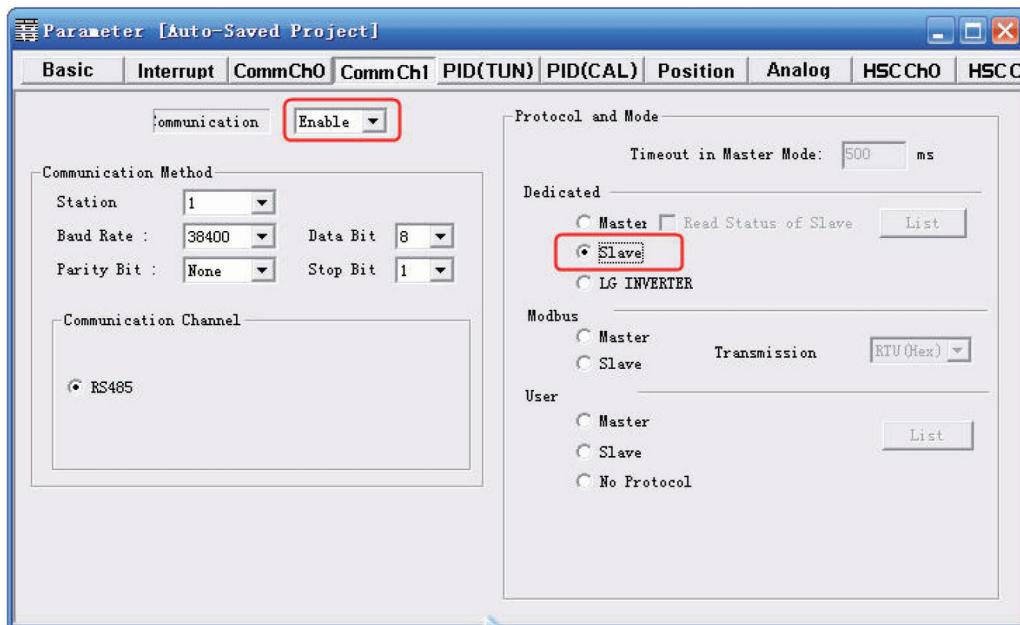

● **When Using LS Master-K Modbus RTU Protocol**

The software settings are as shown below (Please pay attention to the settings encircled by red line.):
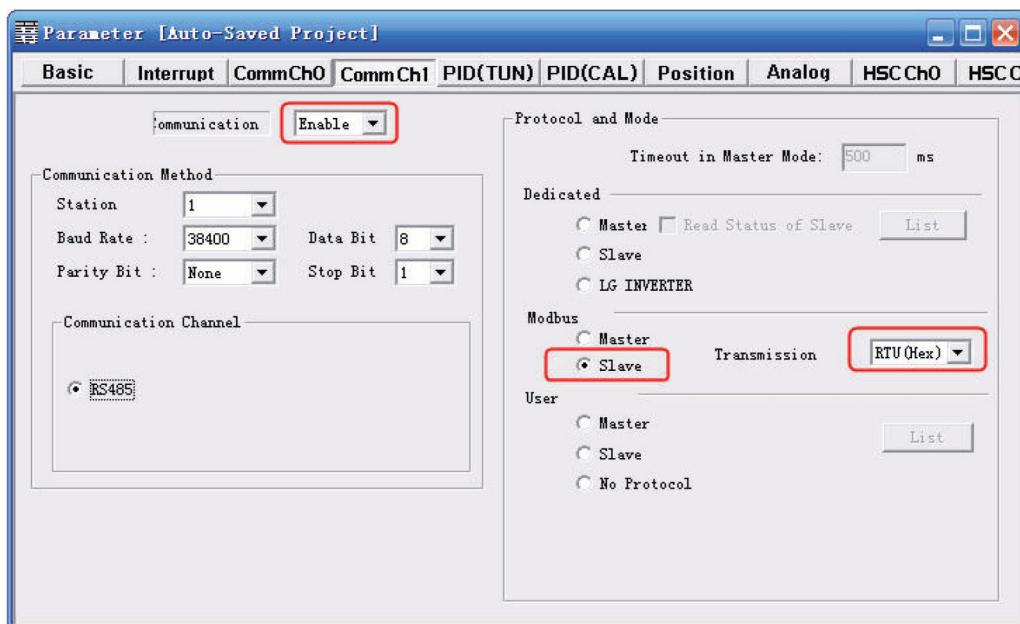

The "Cannot Change PLC Mode" will appear when [Connect+Write+Run+Monitor Start] is clicked, then manual control is needed and download operation is available only when the RUN light is OFF. After the download operation is completed, the RUN light should maintain ON.

● **When Using LS XGT Cnet Protocol**

1 Set the communication parameters through the [Tools]-[Network Manager] menu option.
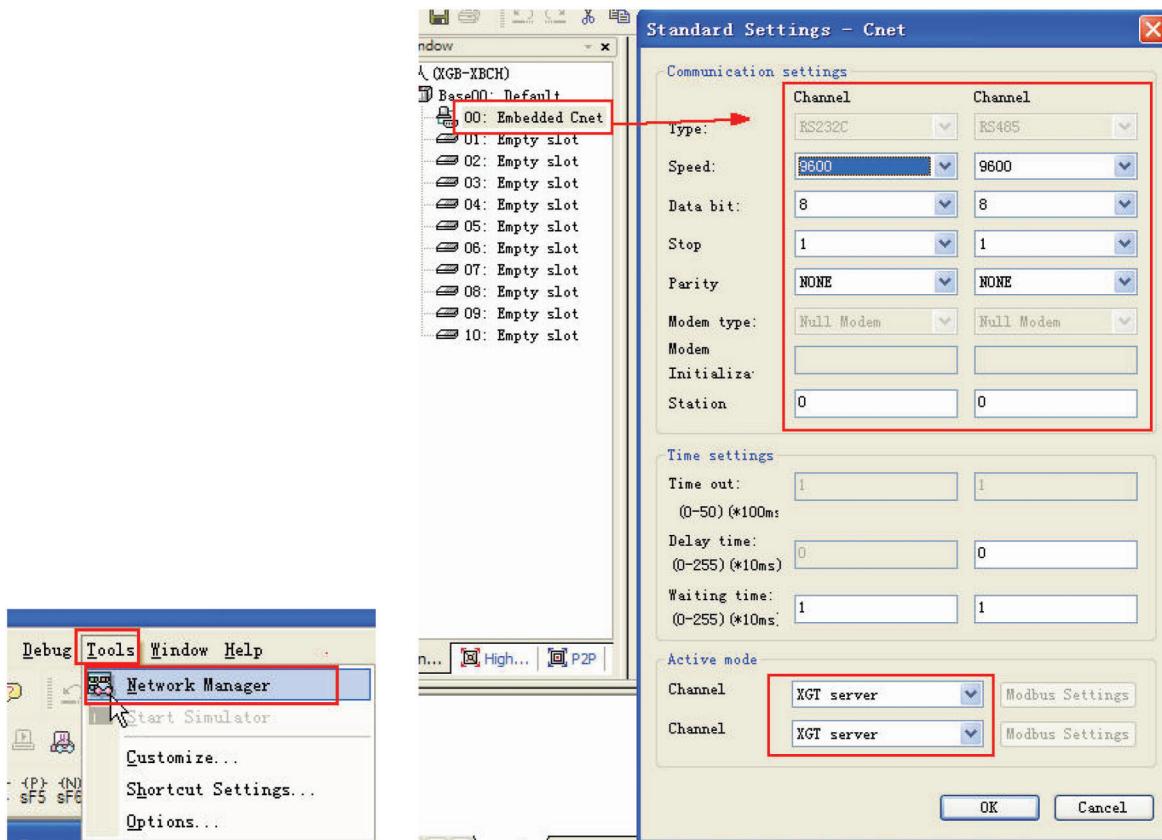

2 PLC must operate in [OPR] mode, which can be set on PLC

7-3 Communication Parameter Setting

7

● **When Using LS XEC Cnet Protocol**

1   Right click on the [Network Configuration]-[Unspecified Network]-[PLC name] and select [Properties].
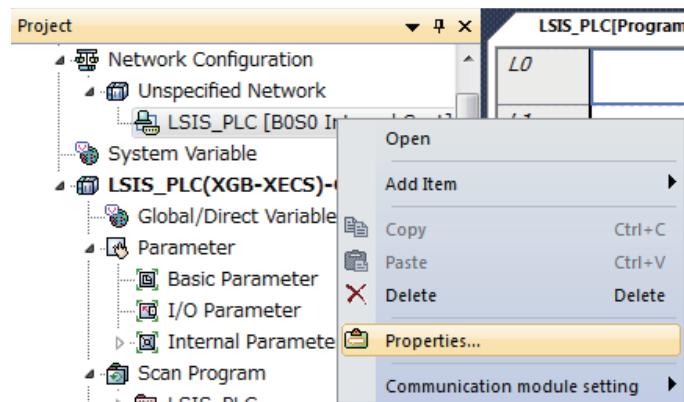

2   On the [Standard Settings - Cnet] window, select the [Standard Settings] tab, and set communication parameters.
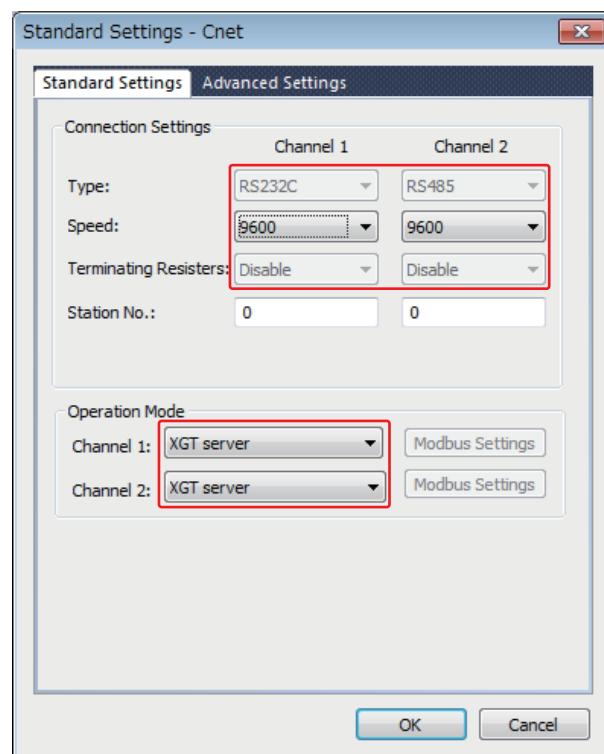

3   On the [Standard Settings - Cnet] window, select the [Advanced Settings] tab, and set communication parameters.
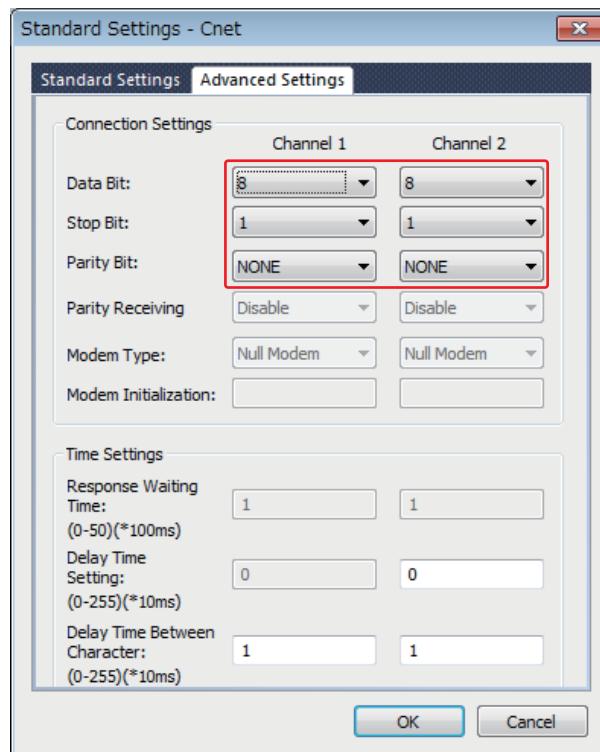

7-4   Supported Registers

K120S K7M-DR10UE

Device	Bit Address	Word Address	Format	Notes
I/O Relay	P 0.0-63.f	------	DD.H	
Auxiliary Relay	M 0.0-191.f	------	DDD.H	
Link Relay	L 0.0-63.f	------	DD.H	
Keep Relay	K 0.0-31.f	------	DD.H	
Special Relay	F 0.0-31.f		DD.H	
Timer	------	T 0-255	DDD	
Counter	------	C 0-255	DDD	
Data Register		D 0-4999	DDDD	

Note For bit registers, if the address in PLC is F01, then the address in PT should be set to F0.1; and if the address in PLC is F2A, then the address in PT should be set to F2.A, and the others can be deduced according to this rule.

LS XGT Cnet

Note   Communication Relay / Register is not supported on the SU type.

Additional Information

1. The address format of %UX is D.DD.DDD (0.0.0-0.15.511) in the PLC, it corresponds to DDDD (0-8191) in the HMI. And the %UX 0.m.n in the PLC is U_Bit m×512+n in the HMI. Similarly, the %UW 0.0.0-0.15.31 in the PLC corresponds to U 0-511 in the HMI. And the %UW 0.m.n in the PLC is U m×32+n.

   For example,
   Internal address: %UX 0.1.0 in the PLC corresponds to U_Bit 512 in the HMI.
   Internal address: %UX 0.15.511 in the PLC corresponds to U_Bit 8191 in the HMI.
   Internal address: %UW 0.1.0 in the PLC corresponds to U 32 in the HMI.
   Internal address: %UW 0.15.31 in the PLC corresponds to U 511 in the HMI.

2. The address format of %QX / IX is DD.DD.DD (0.0.0-15.15.63) in the PLC, it corresponds to DDDDD (0-16383) in the HMI. And the %QX / IX a.b.c in the PLC is Q_Bit / I_Bit a×1024+b×64+c in the HMI.
   Similarly, the %QW / IW 0.0.0-15.15.3 in the PLC corresponds to Q/I 0-1023 in the HMI. And the %QW / IW a.b.c in the PLC is Q / I a×64+b×4+c.

   For example,
   Internal address: %QX / I X 0.1.0 in the PLC corresponds to Q_Bit / I_Bit 64 in the HMI.
   Internal address: %QX / IX 15.15.63 in the PLC corresponds to Q_Bit / I_Bit 16383 in the HMI.
   Internal address: %QW / IW 0.1.0 in the PLC corresponds to Q / I 4 in the HMI.
   Internal address: %QW / IW 15.15.3 in the PLC corresponds to Q / I 1023 in the HMI.

	Terminal R1	4			
	Terminal R2	5			

Precautions for Correct Use

For RS422/485, a terminating resistance short circuit is required. A short-circuit may depend on an NB model. Thus, please refer to *1-2 Part Specifications* in the *NB-series Programmable Terminals Setup Manual* (Cat. No. V107).

	FP1 FP-M	Tool port on the Control unit		RS232C		
		RS232C port on the Control unit				
	FP2 FP2SH	Tool port on the Control unit		RS232C		
		RS232C port on the Control unit				
		AFP2462				
		AFP2465	AFP2803			
			AFP2804	RS422		
			AFP2805	RS485		
	FP3	Tool port on the Control unit		RS232C		
		AFP3462				
		AFP3463		RS422		
	FP-e	Tool port on the Control unit		RS232C		
		AFPE224300		RS232C		
		AFPE214325				
		AFPE224305				
		AFPE224302		RS485		
		AFPE214322				
	FP10SH FP10S	Tool port on the Control unit		RS232C		
		RS232C port on the Control unit				
		AFP3462				
	FP-X	RS232C port on the Control unit		RS232C		

Note 1 Only FP0 (C10CRM/C10CRS/C14CRM/C14CRS/C16T/C16CP/C32CT/C32CP) has RS232C communication port.

   2 Only FP1 (C24/C40/C56/C72) has RS232C communication port.

   3 Only FP1 (C20R/C20T/C32T) has RS232C communication port.

   4 AFP245 is the multi-communication unit for FP2/FP2SH. AFP2803, AFP2804 and AFP2805 are the communication modules connecting to AFP2465.

8-3   Communication Parameter Setting

PT Settings

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), odd (Parity Check), 1 (Stop Bit) and 1 (PLC Station No.)

RS232 Communication
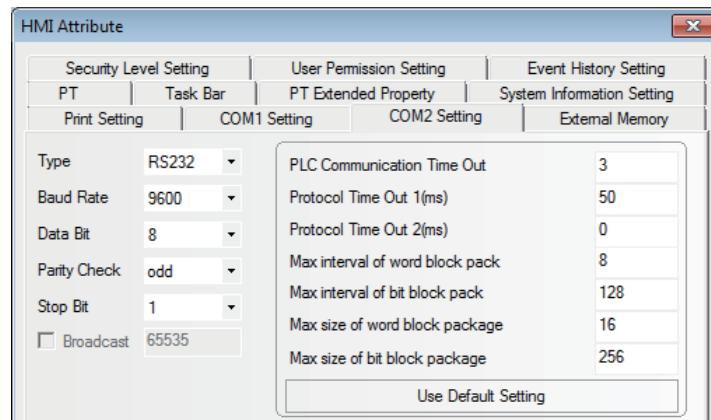

RS485 Communication
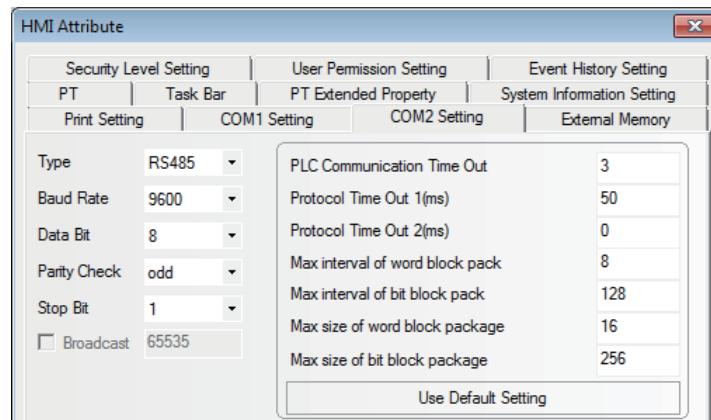

RS422 Communication
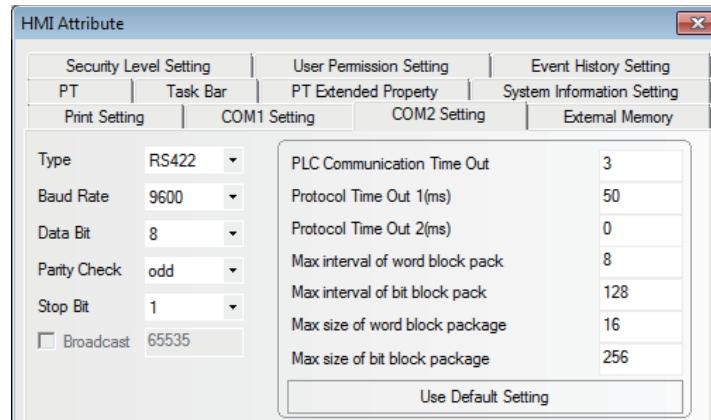

PLC Settings

Please refer to relevant instruction manual of communication device on parameter settings.

8-4   Supported Registers

FP0-C16

Device	Bit Address	Word Address	Format	Notes
External Output Nodes	Y0.0-12.F	---	DD.H	
External Input Nodes	X0.0-12.F	---	DD.H	
Timer Nodes	T0-99	---	DD	
Counter Nodes	C100-143	---	DDD	
Internal Auxiliary Nodes	R0.0-62.F R900.0-903.F	---	DD.H DDD.H	
Setting Value Registers for Timer/Counter	---	SV0-143	DDD	
Actual Value Registers for Timer/Counter	---	EV0-143	DDD	
Data Registers	---	DT0-1659	DDDD	

FPX

Device	Bit Address	Word Address	Format	Notes
External Input Nodes	X0.0~109.F	---	DDD.H	
External Output Nodes	Y0.0~109.F	---	DDD.H	
Timers	T0~1007	---	DDDD	
Counters	C1008~1023	---	DDDD	
Link Nodes	L0.0~127.F	---	DDD.H	
Internal Nodes	R0.0~255.F R900.0~911.F	---	DDD.H	
Actual Value Registers for Timer/Counter	---	EV0-1023	DDDD	
Setting Value Register for Timer/Counter	---	SV0-1023	DDDD	
Data Registers	---	DT0-32764	DDDDD	

Note 1 For X registers, if the address in PLC is X01,then the address in PT should be set to X0.1; and if the address in PLC is X1F, then the address in PT should be set to X1.F and Y, R registers can be deduced according to this rule.

   2 The range of Actual Value Registers for Timer/Counter of the PT can be specified to 32767 at max, while the NB series devices support to 9999 at max.

   3 Address format description: D: decimal, O: octal, H: hexadecimal.

8-4 Supported Registers

| Series	CPU	Link Module	COMM Type	Parameter	Cable
MicroLogix	MicroLogix 1100 MicroLogix 1400	Ethernet port on CPU Unit	-	Refer to Section 9-3	Network Cable
	MicroLogix 1000 MicroLogix 1200 MicroLogix 1400 MicroLogix 1500	Communication Module 1761-NET-ENI	-		

9-3   Communication Parameter Setting

9-3-1   When Using AB SLC500/MicroLogix Series (DF1) Protocol

PT Settings

MicroLogix default communication parameters: 19200 (Baud Rate), 8 (Data Bit), none (Parity), 1 (Stop Bit) and 0 (Station No.)
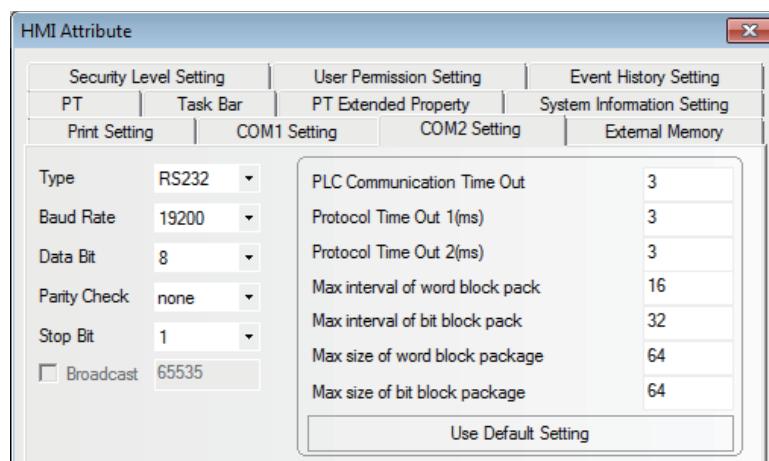

SLC500 default communication parameters: 9600 (Baud Rate), 8 (Data Bit), none (Parity), 1 (Stop Bit) and 0 (Station No.)
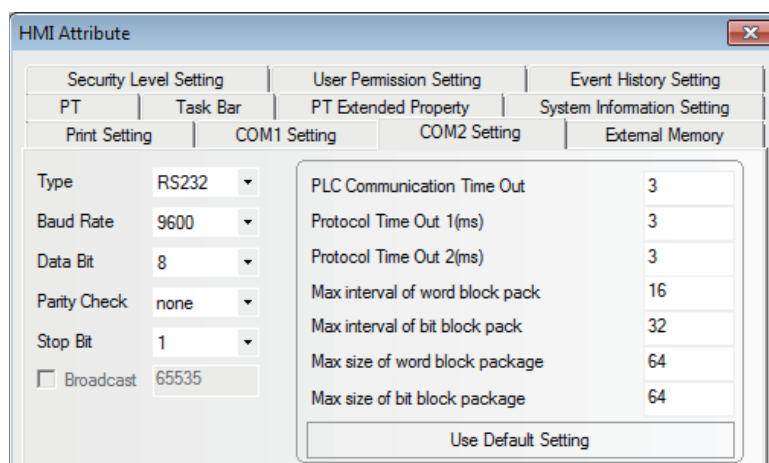

PLC Settings

• RSLogix500 software setting (Take MicroLogix 1500 as example)

Select the "DF1 Full Duplex" for Driver option and "CRC" for the [Error Detection] option in the Channel Configuration dialog box of the software.
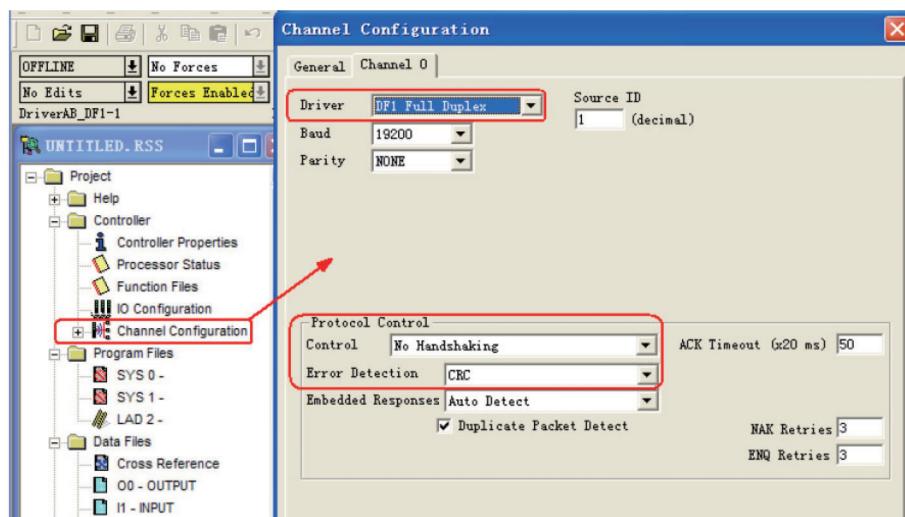

And the register setting is also available.
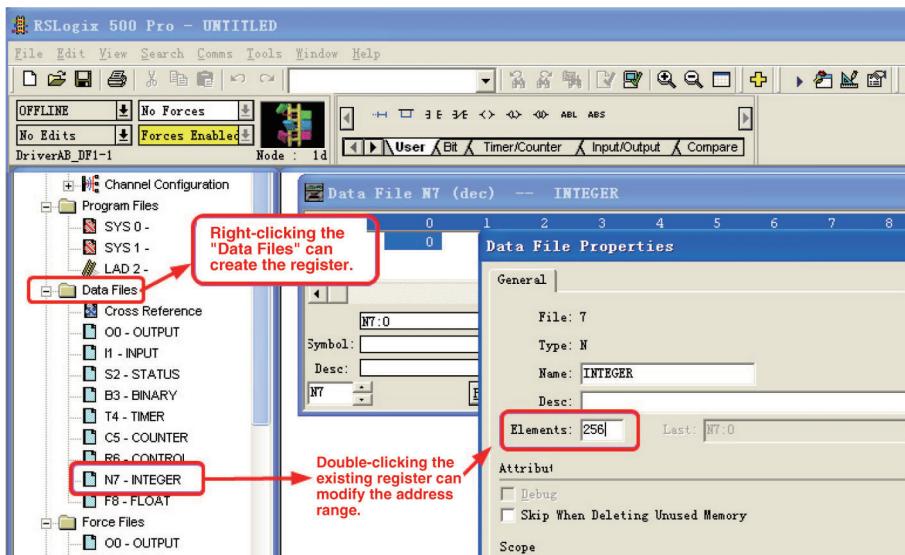

Rules of register setting:

(1) The file number should be unique. This number is set when the register is created, and after the creation, the file number will be fixed and therefore cannot be modified.

(2) The range of PLC addresses should be greater than the settings of the PT.

(3) The PLC has a limited memory capacity. During downloading, if a message "Program has errors, cannot download" pops up, it indicates the occurrence of an over-range caused by too many addresses allocation.

(4) T and C areas do not support the communication system which requires serial addresses simultaneously.

9-3-2 When Using AB CompactLogix/ControlLogix Series (DF1) Protocol

PT Settings

CompactLogix/ControlLogix default communication parameters: 19200 (Baud Rate), 8 (Data Bit), none (Parity), 1 (Stop Bit) and 0 (Station No.)
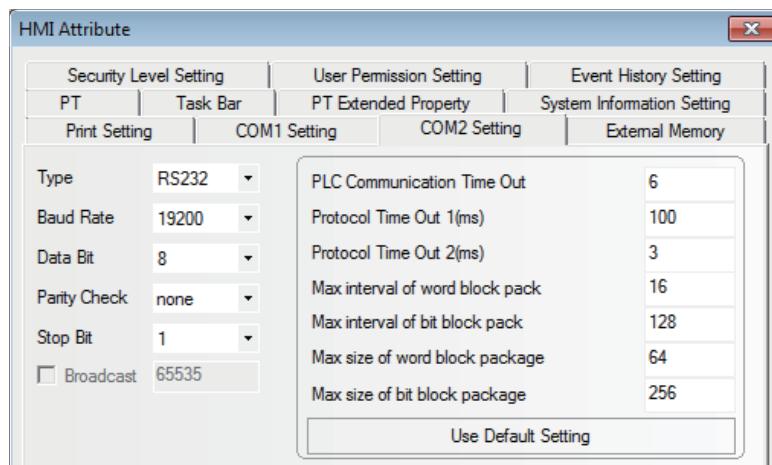

PLC Settings

- RSLogix5000 Software Settings

Note "DF1 Point to Point" is selected as Protocol; "CRC" is selected as Error Detection and "Enable Duplicate Detection" is not checked.

1   Set the parameters of the communications in [Controller Properties] dialog box.
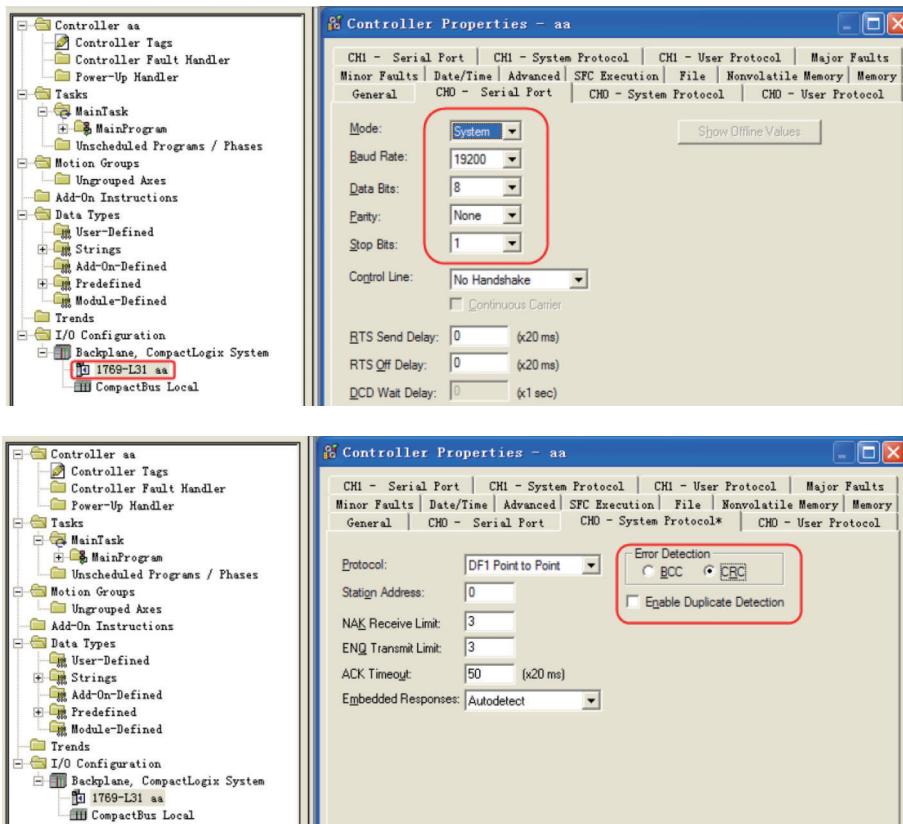

2   Define the tag and set the data types, then select "Controller Tags" and right-click the "New Tag" option in the dropdown list to create a new tag.

Note 1 The internal registers of the controller to be accessed by the PT needs to be pre-defined in the RSLogix5000 software.

2 Controller Tags apply to all the routines in the controller. For the control, these tags are global, so they need to be created in "Controller Tags".
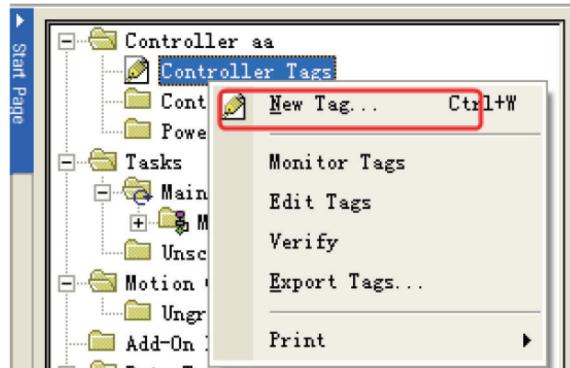

3   Make the Name correspond to the File Number, and then select "Map PLC/SLC Messages" in the dropdown list after "Logic" being selected.

Note The software must be changed to "Offline" status.
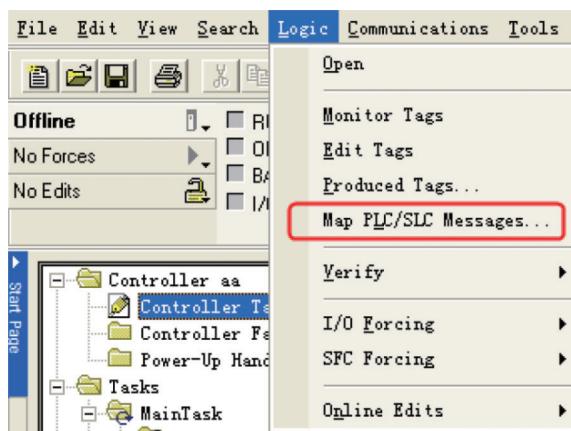

• Setting Example

Create a new tag with Name of a and Data Type of INT.
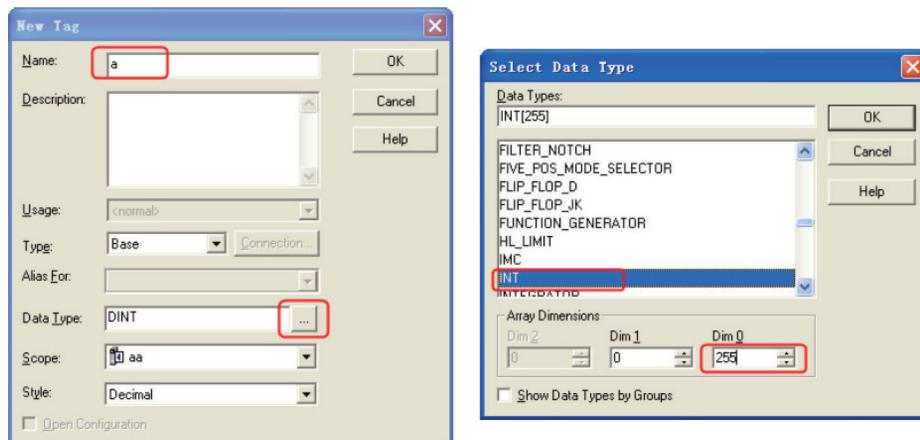

Note 1 When selecting the Data Type, note that the CompactLogix/ControlLogix protocol supports only 3 Data Types such as INT, BOOL, and REAL.

2 The protocol does not support multidimentional array. Only the range of Dim0 can be defined.

3 The range of file number supported by each Data Type is 0 to 253 for INT, 0 to 253 for REAL, and 0 to 999 for BOOL.

Continue to create 2 tags: one with Name of b and Data Type of REAL and the other with name of c and Data Type of BOOL, as shown below:

Note The address range of BOOL variable is defined to 1024 in the PLC, however, the accessible address range is to 999 at max.

After defining the tags, you also need to make the mapping between the Name and the File Number.
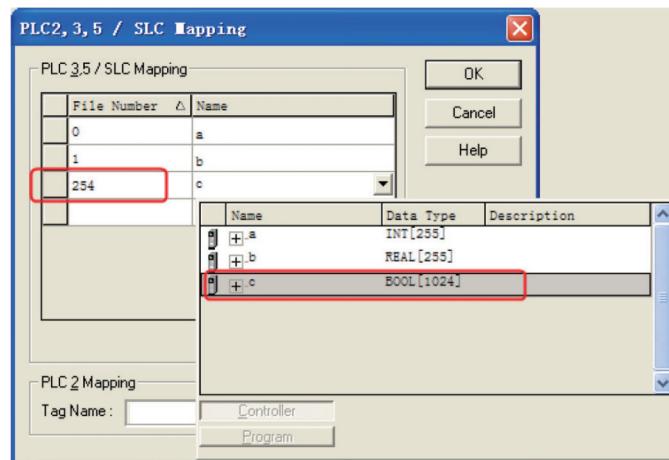

Note 1 The file number should be unique, i.e., the same file number cannot be mapped on the different file names.

2 The file number available to be supported ranges from 0 to 254.

The mapping of the above-mentioned items with NB-Designer addresses is shown as the following table.

Name	Data Type	Support Range	File Number	NB-Designer Address
a	INT[255]	0~254	0	INT 000000~000254
s	REAL[255]	0~254	1	REAL 001000~001254
b	BOOL[1024]	0~999	254	B_BOOL 254000~254999

9-3-3 AB MicroLogix Series Ethernet(TCP Slave)

PT Settings

The Network Settings of PT are as shown below.
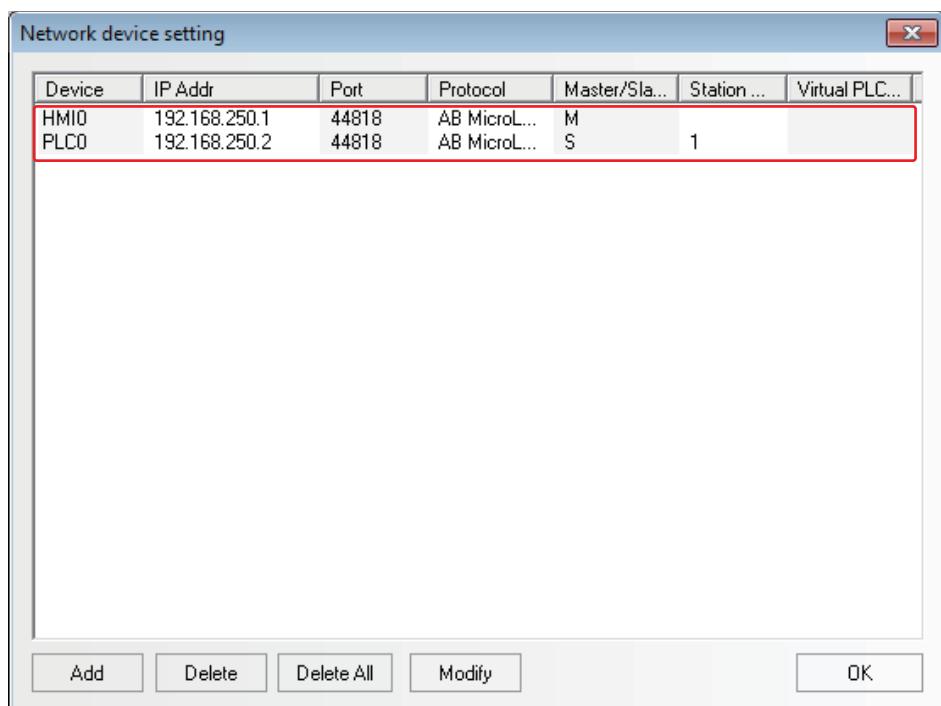

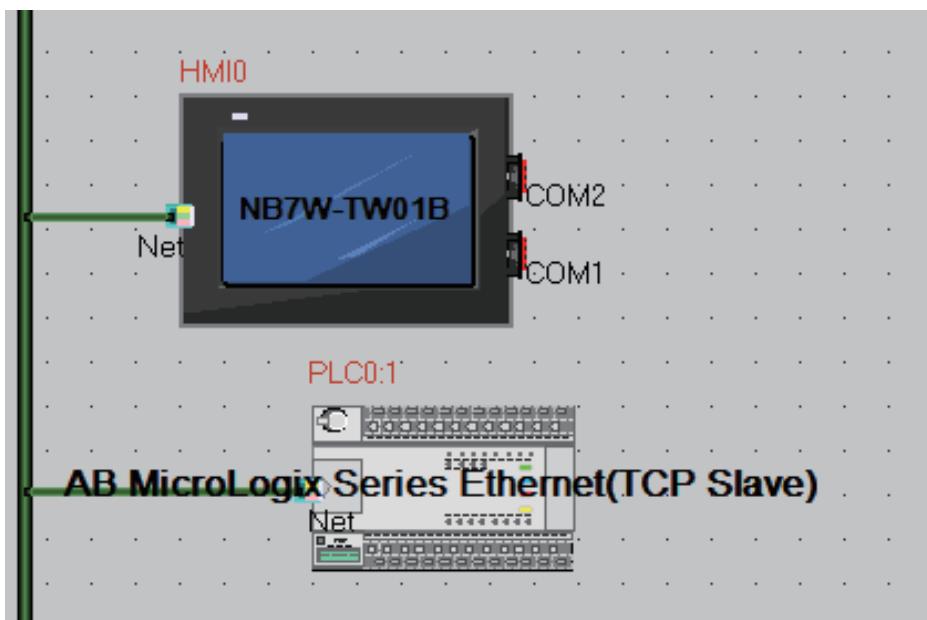

PLC Settings

The PLC Settings when using Communication Protocol AB MicroLogix Series Ethernet (TCP Slave) are as shown below.

● **Using Ethernet port on CPU Unit**

1 Start-up RSLogix 500 and double-click [Channel Configuration].
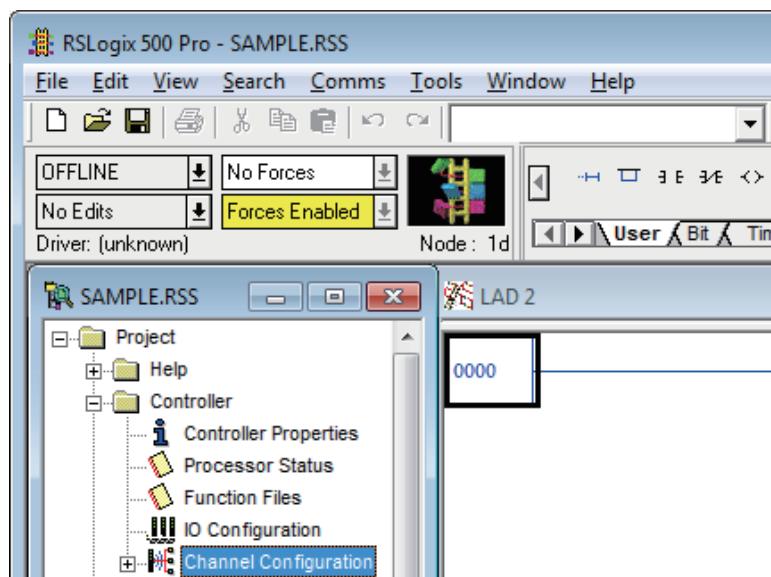

2 Select the tab of a channel to which Ethernet port is allocated.

Set the IP Address to the same address as the PT settings.
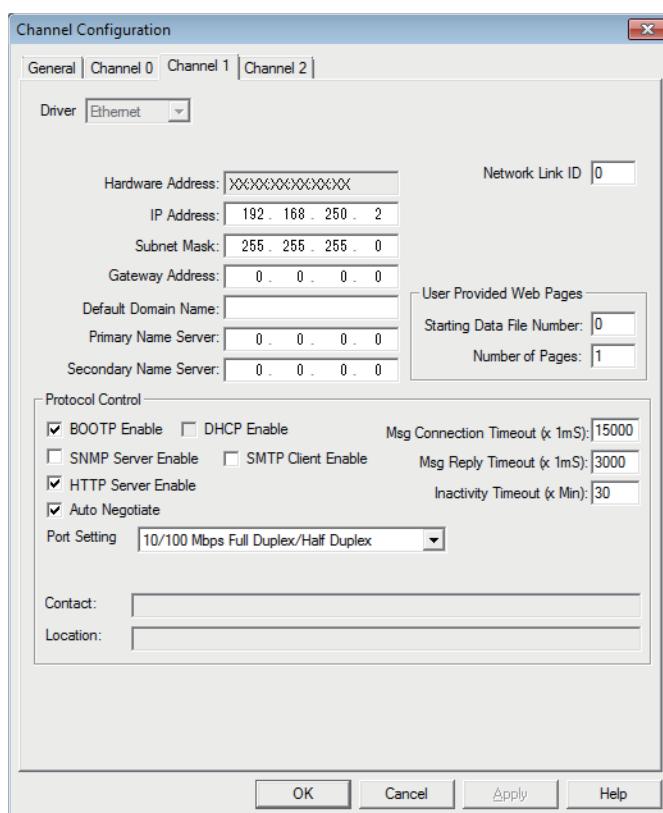

● **Using the Communication Module**

1   Start-up ENI/ENIW Utility.

Set the IP Address to the same parameters as the PT settings.
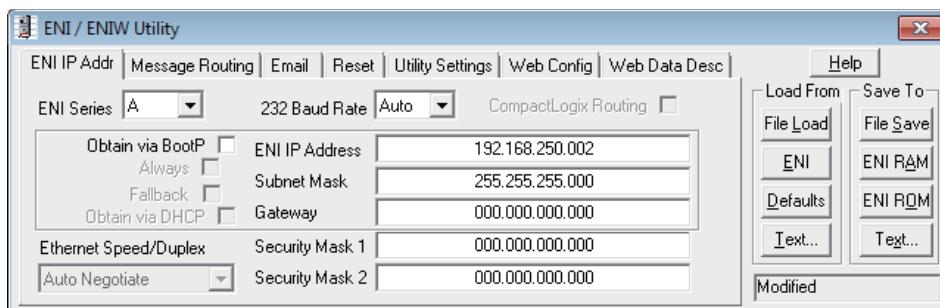

2   Click ENI ROM to save the settings.

9-4   Supported Registers

📝 **Additional Information**

FFF refers to the File Number and DDD refers to the Variable No. Address.

AB SLC500/MicroLogix Series (DF1) Driver

Device	Bit Address	Word Address	Format	Notes
Internal Auxiliary Nodes	B3: 0.0~255.15	------	DDD.DD	
Internal Auxiliary Nodes	B10: 0.0~255.15	------	DDD.DD	
Internal Auxiliary Nodes	B11: 0.0~255.15	------	DDD.DD	
Internal Auxiliary Nodes	B12: 0.0~255.15	------	DDD.DD	
Internal Auxiliary Nodes	B13: 0.0~255.15	------	DDD.DD	
Internal Auxiliary Nodes	Bf:n 0.0~255255.15	------	FFFDDD.DD	*2
External Input Nodes	I1: 0.0~255.15	------	DDD.DD	
External Output Nodes	O0: 0.0~255.15	------	DDD.DD	
Data Registers	------	N7: 0~255	DDD	
Data Registers	------	N10: 0~255	DDD	
Data Registers	------	N11: 0~255	DDD	
Data Registers	------	N12: 0~255	DDD	
Data Registers	------	N13: 0~255	DDD	
Data Registers	------	N14: 0~255	DDD	
Data Registers	------	N15: 0~255	DDD	
Data Registers	------	Nf:n 0~255255	FFFDDD	*2
Floating-point Data Registers	------	F8: 0~255	DDD	
Actual Value Registers for Counter	------	C5PV: 0~255	DDD	
Setting Value Register for Counter	------	C5SV: 0~255	DDD	
Actual Value Registers for Timer	------	T4PV: 0~255	DDD	
Setting Value Registers for Timer	------	T4SV: 0~255	DDD	

Note 1   The format of I/O address for bit register is "I/O e.s/b", where, "e" is the slot number, "s" is the pixel number, and "b" is the bit number. If the address in PLC is O0 0.0/11, then the address in PT should be set to "O0 0.11"; and if the address in PLC is O0 0.1/8, then the address in PT should be set to "O0 1.8". When AB with the different CPU types uses the I/O modules, the addresses of I point and O point in PT are arranged con-secutively. Take Micrologix1400 with output module 1762-OW16 as example, the address corresponding to O0 1.0/3 in PT is O0 6.3.

2   When the address is less than three digits, it should be filled with 0 to be three digits.
Example: When 113 refer to File number 113 and 10.12 refers to Address 10.12, specify to 113010.12

AB CompactLogix/ControlLogix Series (DF1) Driver

Device	Bit Address	Word Address	Format	Note
Integer data file bit level	N_BOOL000000.00~254254.15	------	FFFDDD.DD	
Bit data file	B_BOOL000000~254991	------	FFFDDD	
Floating point data file	------	REAL000000~254254	FFFDDD	
Integer data file	------	INT000000~254254	FFFDDD	

Note 1 Take N_ BOOL 112087.12 as example, the first three number 112 is the File Number, and 087.12 is the Variable No. Address. The blanks before the Variable No. Address less than three digits should be filled with 0.

   2 The File Number can be customized by the user.

   3 INT000000~254254 indicates that the range of the File Number is 0 to 254 (the first 3 digits), and the Address Range of the variable is 0 to 254 (the last 3 digits). If 001255 is input, a dialog box "over read address" will pop up, requesting the user to input again.

AB MicroLogix Series Ethernet (TCP Slave) Driver

Device	Bit Address	Word Address	Format	Note
Internal Auxiliary Nodes	B3: 0.0~255.15	------	DDD.DD	
Internal Auxiliary Nodes	B10: 0.0~255.15	------	DDD.DD	
Internal Auxiliary Nodes	B11: 0.0~255.15	------	DDD.DD	
Internal Auxiliary Nodes	B12: 0.0~255.15	------	DDD.DD	
Internal Auxiliary Nodes	B13: 0.0~255.15	------	DDD.DD	
Internal Auxiliary Nodes	Bf:n : 0.0~255255.15	------	FFFDDD.DD	*1
External Output Nodes	O0: 0.0~255.15	------	DDD.DD	
External Input Nodes	I1: 0.0~255.15	------	DDD.DD	
Actual Value Registers for Counter	------	C5PV: 0~255	DDD	
Setting Value Register for Counter	------	C5SV: 0~255	DDD	
Floating-point Data Registers	------	F8: 0~255	DDD	
Floating-point Data Registers	------	Ff:n : 0~255255	FFFDDD	*1
Input Data File	------	IW1: 0~255	DDD	
Data Registers	------	N7: 0~255	DDD	
Data Registers	------	N10: 0~255	DDD	
Data Registers	------	N11: 0~255	DDD	
Data Registers	------	N12: 0~255	DDD	
Data Registers	------	N13: 0~255	DDD	
Data Registers	------	N14: 0~255	DDD	
Data Registers	------	N15: 0~255	DDD	
Data Registers	------	Nf:n :0~255255	FFFDDD	*1
Output Data File	------	OW1: 0~255	DDD	
Actual Value Registers for Timer	------	T4PV: 0~255	DDD	
Setting Value Registers for Timer	------	T4SV: 0~255	DDD	

*1   When the address is less than three digits, it should be filled with 0 to be three digits.
   Example: When 113 refers to File number 113 and 10.12 refers to Address 10.12, specify to 113010.12.

9-5   Cable Fabrication

Serial Communication Cable

● RS232 Communication Cable for MicroLogix

• Communication Cable (Cat.No.: 1761-CBL-PM02) manufactured by Rockwell Automation, Inc.

PT (COM1/COM2)				PLC		
D-Sub 9Pin (Female)	Signal	Pin No.		Pin No.	Signal	D-Sub 9Pin (Female)
	SD	2		3	RXD	
	RD	3		2	TXD	
	SG	9		5	SG	
				7	RTS	
				8	CTS	
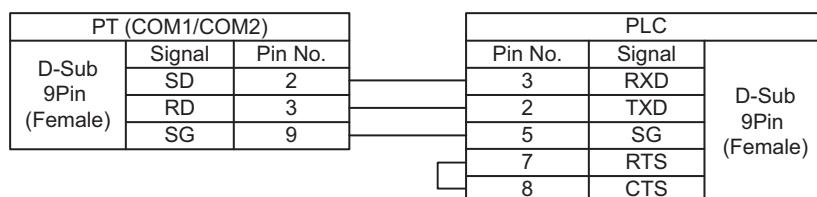

• ALC +Advanced Interface Converter (Cat.No.:1761-NTE-AIC) and RS232 Communication Cable

PT (COM1/COM2)				Micrologix series AIC-terminal		
D-Sub 9Pin (Female)	Signal	Pin No.		Pin No.	Signal	D-Sub 9Pin (Female)
	SD	2		2	RXD	
	RD	3		3	TXD	
	SG	9		5	GND	
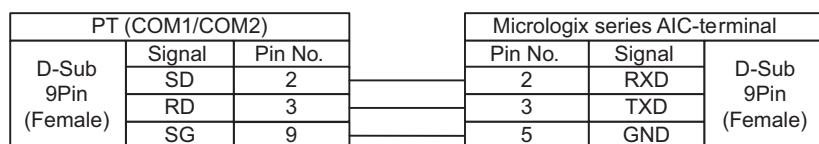

● RS232 Communication Cable for SLC 5 / 03

10-3 Serial Port Communication Parameter Setting

PT Settings

Default communication parameters for GE Fanuc Series SNP Protocol: 19200 (Baud Rate), 8 (Data Bit), odd (Parity), 1 (Stop Bit), 1 (Station No.).

RS232 Communication
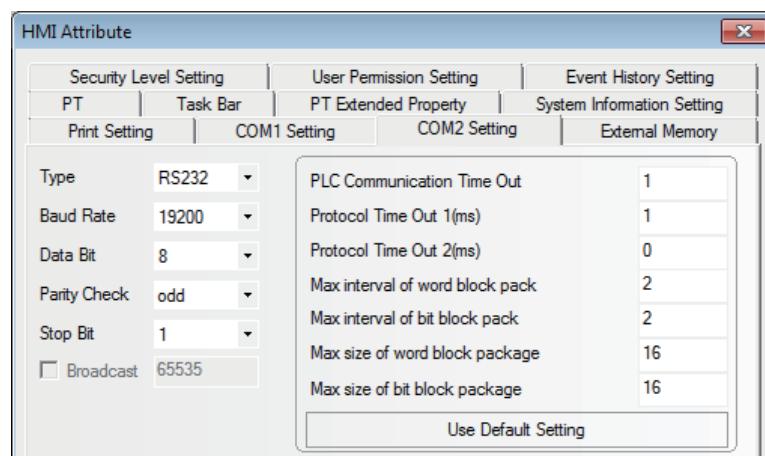

RS422 Communication
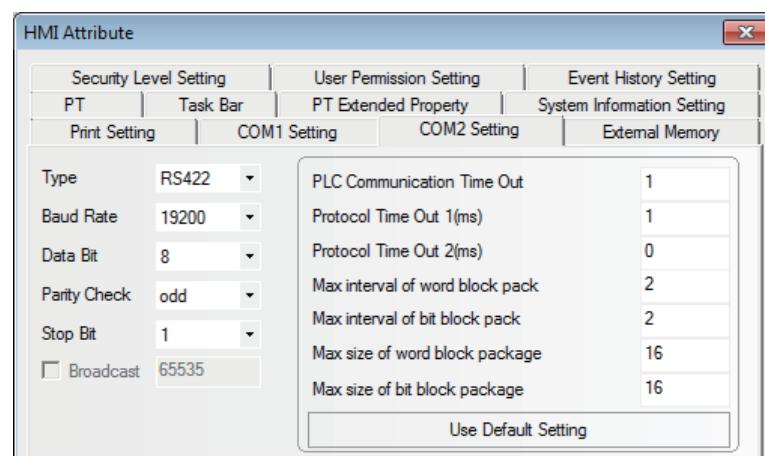

Default communication parameters for GE SNP-X Protocol: 19200 (Baud Rate), 8 (Data Bit), odd (Parity), 1 (Stop Bit), 1 (Station No.).

RS232 Communication
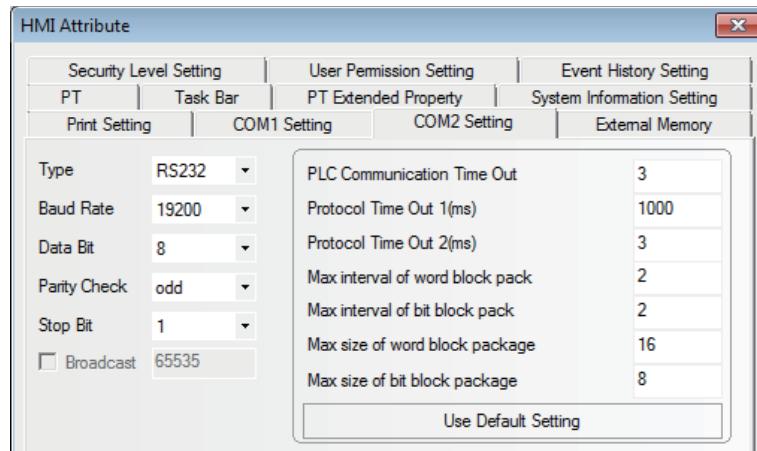

RS422 Communication
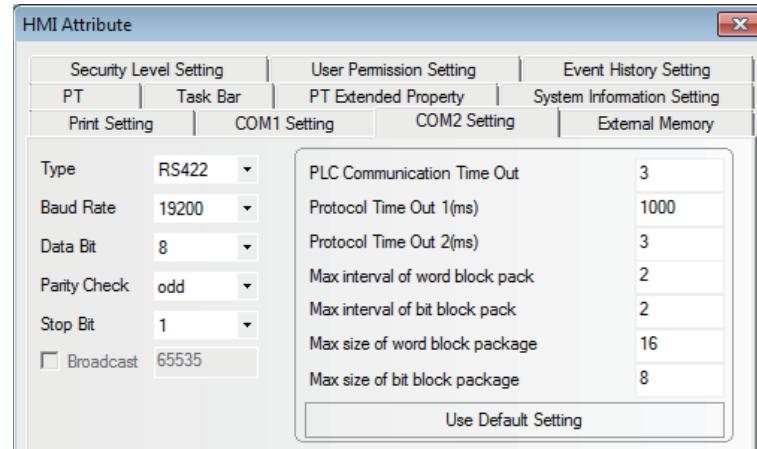

Note The maximum baud rate for the communication with serial port of GE Host is 19200 bps.

PLC Settings

Take the settings of IC693CPU331 and IC693CMM311 as example:

Select the PLC and devices with the correct models in the Proficy Machine Edition window and you can see the default settings here. There is no need to change the settings unless for some special conditions. But please note the SNP settings. And it only needs to set the related parameters in the PT to be the same as that herein.
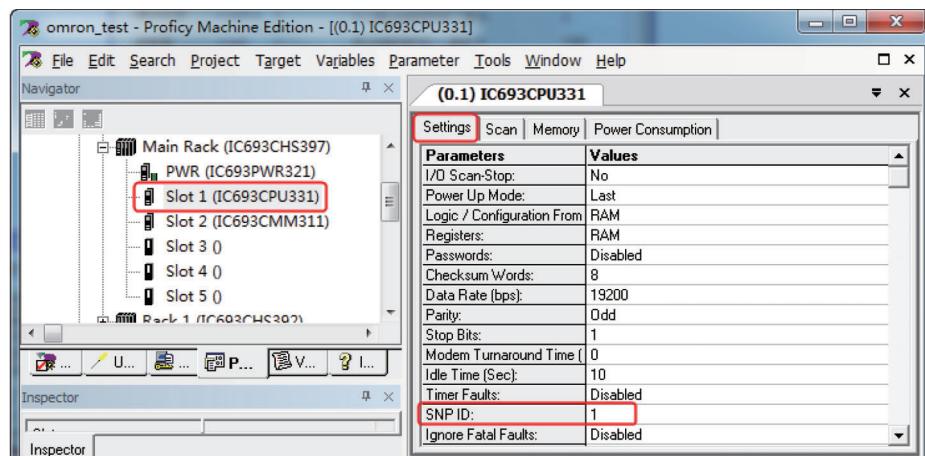

Note "SNP Only" should be selected during the configuration Mode setting.
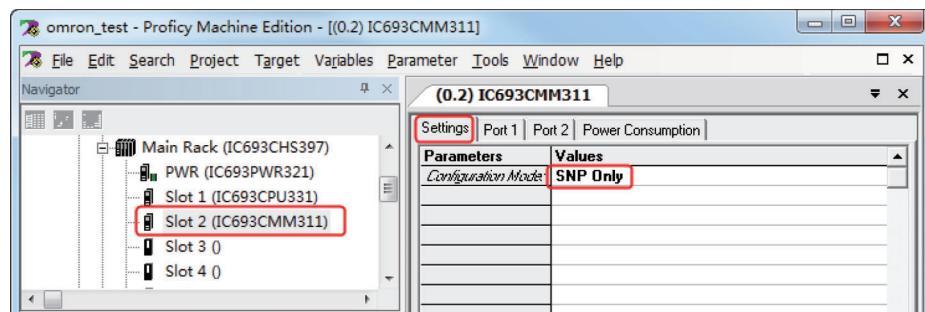

10-4 Supported Registers

Device	Bit Address	Word Address	Format	Notes
System	SC 01~32	------	DD	
System	SB 01~32	------	DD	
System	SA 01~32	------	DD	
System	S 01~32	------	DD

11
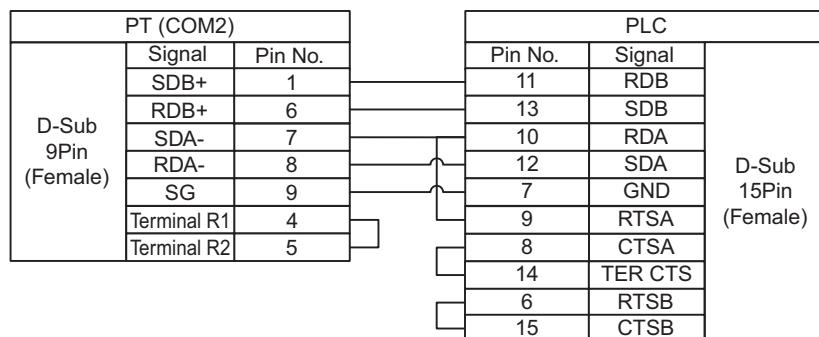

Connecting to Keyence PLCs

This section describes methods to connect to Keyence PLCs.

11-1   Serial Port and the Ethernet

Series	CPU	Link Module	Driver
KV-3000	KV-3000 CPU	RS232 Port on CPU Unit	KeyenceKV-3000
KV-5000	KV-5000 CPU	Ethernet Port on CPU Unit	KeyenceKV-5000 EtherNetSlave

* This Protocol supports Multiple Station No.

11-2 Communication Setting and Cable Connection

| Series	CPU	Link Module	Communication Type	Set Value	Cable
KV-3000	KV-3000 CPU	RS232 Port on CPU Unit	RS232	Refer to *11-3 Communication Setting*	Self-made connecting cable required.
KV-5000	KV-5000 CPU	Ethernet Port on CPU Unit	-	Refer to *11-3 Communication Setting*	Network cable

11

11-3   Communication Setting

11-3-1   When Using Keyence KV-3000 Communication Protocol

PT Settings

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), even (Parity Check) and 1 (Stop Bit)

As showed in the right of dialog box as below, PLC Communication Time Out, Max interval of word block pack, Max interval of bit block pack, Max word block package are varied with PLC protocol. Generally, the default values are selected.

RS232 Communication
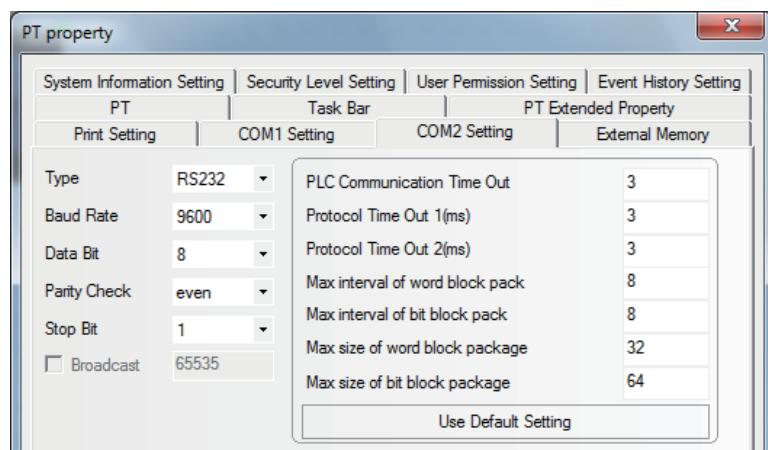

Note The Baud Rate supports 9600, 19200, 38400, 57600 and 115200.

PLC Settings

When Keyence KV-3000 Communication Protocol is used, the setting of PLC is not required.

11-3-2 When Using Keyence KV-5000 EtherNetSlave Communication Protocol

PT Setting

The PT Network Setting is shown as follows.
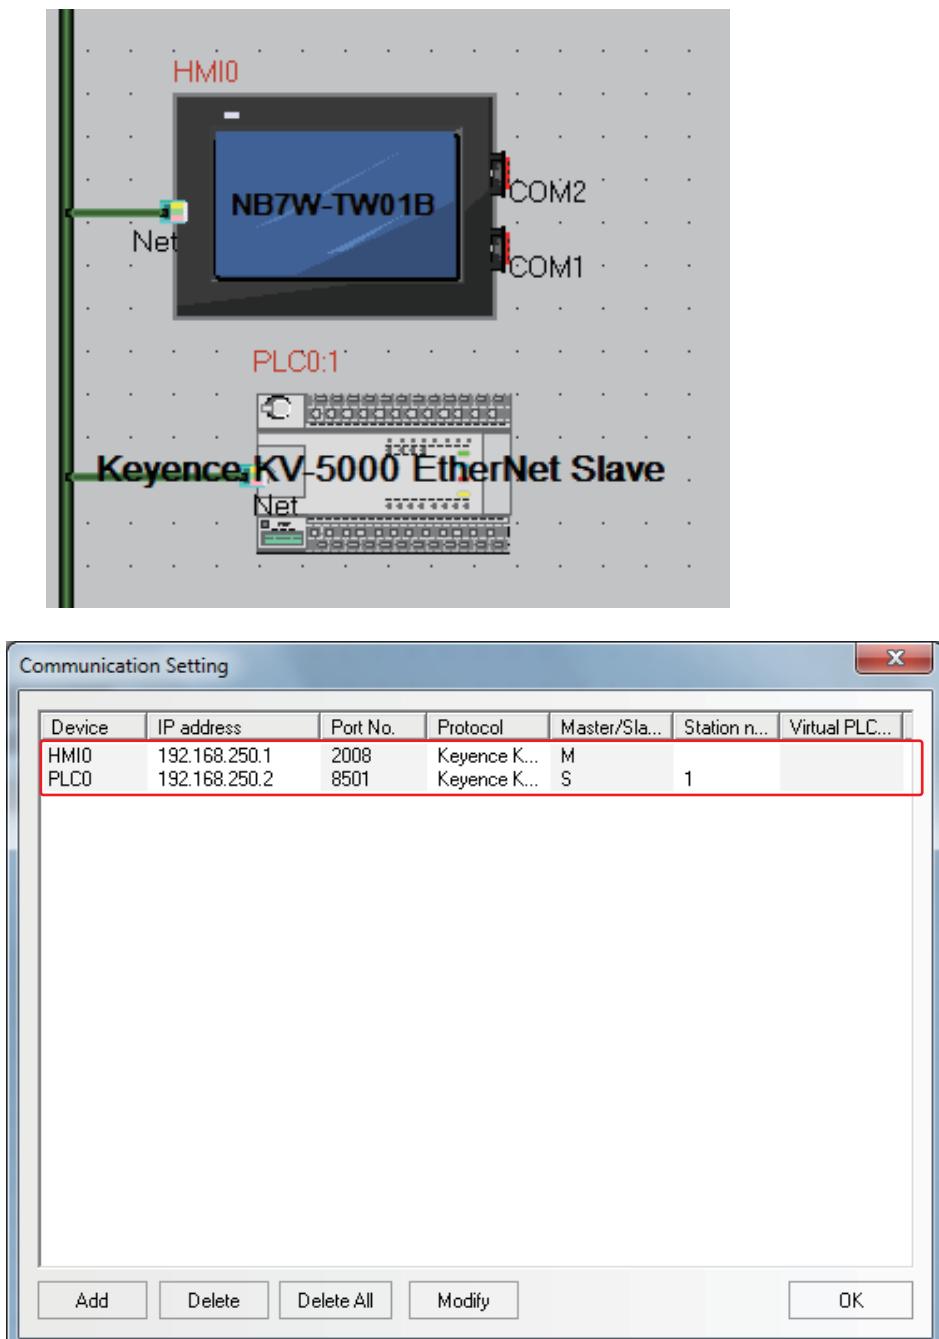

PLC Setting

PLC Setting when using Keyence KV-5000 EtherNetSlave Protocol is shown as below.

1   Double-click the [Ethernet] - [KV-5000] under [Unit Configuration] in KV-STUDIO Software.

2   Open the [Unit Editor] dialog box.

Set the IP address and Port Number (upper link) to the same parameters as the PT setting.

11-4 Supported Registers

KV-3000

Device	Bit Address	Word Address	Format	Notes
Input, Output, Internal Relay	R0-999.15	------	DDD.DD	
Internal auxiliary Relay	MR0-999.15	------	DDD.DD	
Control Relay	CR0-39.15	------	DD.DD	
Latch Relay	LR0-999.15	------	DDD.DD	
Data Memory	------	DM0-65534	DDDDD	
Extended Data Memory	------	EM0-65534	DDDDD	
Temporary Data Memory	------	TM0-511	DDD	
Control Memory	------	CM0-5999	DDDD	
File Register	------	FM0-32767	DDDDD	

KV-5000

Device	Bit Address	Word Address	Format	Notes
Input, Output, Internal Relay	R0-999.15	------	DDD.DD	
Internal auxiliary Relay	MR0-999.15	------	DDD.DD	
Control Relay	CR0-39.15	------	DD.DD	
Latch Relay	LR0-999.15	------	DDD.DD	
Data Memory	------	DM0-65534	DDDDD	
Extended Data Memory	------	EM0-65534	DDDDD	
Temporary Data Memory	------	TM0-511	DDD	
Control Memory	------	CM0-5999	DDDD	
File Register	------	FM0-32767	DDDDD	

11-5 Cable Connection

KV-3000 Series RS232 Communication Cable

● **RS-232 Communication Cable**

PT (COM1/COM2)				PLC		
D-Sub 9 PIN (Female)	Signal	Pin No.		Pin No.	Signal	RJ-12 (Female)
	SD	2		5	SD	
	RD	3		3	RD	
	SG	9		4	SG	

KV-5000 Series Ethernet Communication Cable

Use Twisted Pair Cable to connect. Refer to *Ethernet communication specifications* in *A-1-3 Communication Specifications* in the *NB-series Programmable Terminals Setup Manual* (Cat. No. V107).

12

Connecting to OMRON Safety Controller

This section describes the method to connect to OMRON Safety Controller.

12-1 Serial Port

Series	CPU	Destination	Driver
G9SP	G9SP-N10S G9SP-N10D G9SP-N20S	RS-232C Connector of Option Board mounted to the Safety Controller*	OMRON G9SP

* Model CP1W-CIF01 is needed.

12-2 Communication Parameters and Cable Fabrication

Series	CPU	Destination	Communication Type	Set Value	Cable
G9SP	G9SP	RS-232C Connector of Option Board mounted on the Safety Controller	RS232	Refer to *12-3 Communication Parameter Setting*	XW2Z-200T 2m XW2Z-500T 5m

12-3 Communication Parameter Setting

12-3-1 When using OMRON G9SP Communication Protocol

PT Settings

PT default communication parameters: 9600bps (Baud Rate), 8 (Data Bit), even number (Parity Check) and 1 (Stop Bit)
As showed in the right of dialog box as follow, the default values are generally selected to PLC Communication Time Out, Max interval of word block package, Max interval of bit block pack, and Max size of word block package.

RS232 Communication
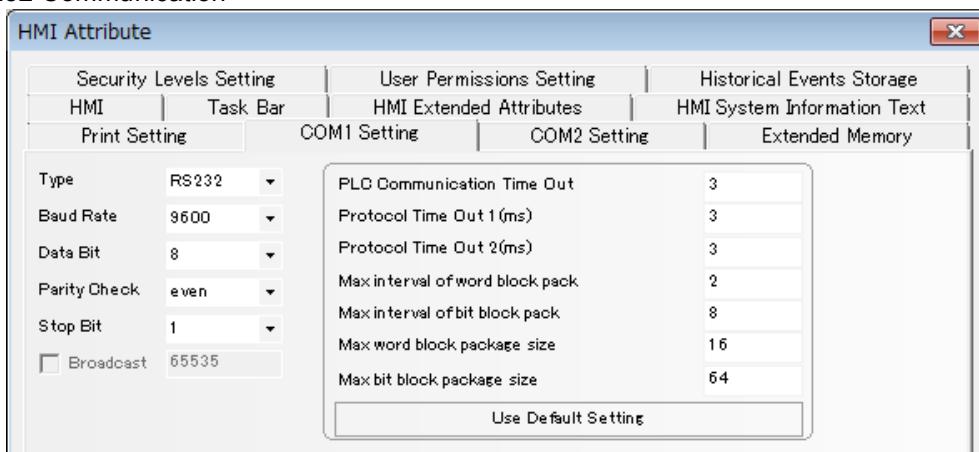

Note G9SP Serial Communication Protocol only supports communication speed of 9600bps.

PLC Settings

When OMRON G9SP Communication Protocol is used, the setting of PLC is not required.

Precautions for Correct Use

For the specification of G9SP protocol, write occurs when the NB series startup.

Therefore, from the NB series startup until the value is set to the WD area, initial value 0 is written to "Optional Communications Reception Data" of G9SP.

When "Optional Communications Reception Data" of G9SP is used in the program of G9SP, follow the indications to avoid accidental writing the initial value 0 from the NB series.

- When the NB series or power supply is restarted during the G9SP operation, make sure that no influences to the G9SP to perform it.
- After set the initial value to the WD area with the Macro and arrange the components which can execute the Macro when timer component or others startup in startup screen, set the value of the WD area before write occurs.

```
24      int MacroEntry()
25    □ {
26          W = 0x88888888;
27          return 0;
28      }
```

Macro Variable Table[macro_0.c]

Storage F...	Name	PLC No.	Area	Address	Word...	R/W	Array	Array length
unsigned int	W	0	WD	0	2	Write	No	

Also be aware of the initial value 0 which is written from the NB series even at G9SP to design the program.

12-4 Supported Registers

Transmission Data (G9SP Series → PT)

Device	Bit Address (format DD)	Word Address (format DD)	Notes
Optional Communications Transmission Data	CTD 0-31	-----	
Safety Input Terminal Data Flags	SID 0-47	-----	
Safety Output Terminal Data Flags	SOD 0-31	-----	
Safety Input Terminal Status Flags	SIS 0-47	-----	
Safety Output Terminal Status Flags	SOS 0-31	-----	
Safety Input Terminal Error Causes	-----	SIE 0-47	Nibble device
Safety Output Terminal Error Causes	-----	SOE 0-31	Nibble device
Reserved	-----	RES1 0-1	Byte device
Unit Status and Echo-back	USE 0-15	-----	
Configuration ID	-----	CID 0-0	
Unit Conduction Time	-----	UCT 0-0	Double word device
Reserved	-----	RES2 0-19	Byte device
Present Error Information	-----	PEI 0-11	Byte device
Error Log Count	-----	ELC 0-0	Byte device
Operation Log Count	-----	OLC 0-0	Byte device
Error Log	-----	EL 0-9	Double word device
Operation Log	-----	OL 0-9	Double word device

Reception Data (PT → G9SP Series)

Device	Bit Address (format DD)	Word Address (format DD)	Notes
Optional Communication Reception Data	WD_Bit 0-31	WD 0-1	

Additional Information

In the case of a byte device or a nibble device, insufficient byte to the Word length are to be filled with 0.
Example: In the communication data, when the sent data is 0x12345678 and upper bytes are read as the byte device, all the bytes are displayed as 0x00001234.

12-5 Cable Connection

● **RS-232 Communication Cable**

Use either of cables recommended for the communication cable.

XW2Z-200T (cable length 2m) manufactured by OMRON

XW2Z-500T (cable length 5m) manufactured by OMRON

Revision History

A manual revision code appears as a suffix to the catalog number on the front cover of the manual.

Cat. No. V108-E1-□
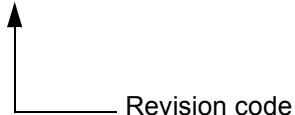

Revision code

Revision code	Date	Revised content
01	October 2011	Original production
02	April 2012	Adding descriptions of Modbus network interface communication and Modbus protocol.
03	August 2012	Adding descriptions of connecting to PLCs manufactured by Allen-Bradley and GE Fanuc Automation INC.
04	December 2012	Correction related to the backlight lamp and rubber packing maintenance in Precautions for Safe Use.
05	December 2012	• Adding descriptions of the power supply and wire connection in Precautions for Safe Use. • Adding descriptions of the serial port COM. • Adding descriptions of E5CC/E5EC and 3G3MX2 connection using Modbus protocol.
06	April 2013	Changes and corrections
07	August 2013	Adding descriptions of support models
08	November 2013	Changes and corrections
09	February 2014	Adding descriptions of support models
10	July 2014	Adding descriptions of support models
11	October 2014	Adding descriptions of support models
12	April 2016	Changes and corrections
13	October 2016	Changes and corrections
14	March 2017	Changes and corrections
15	July 2017	Adding descriptions of support models
16	December 2017	Changes and corrections
17	April 2018	Changes and corrections
18	November 2019	Changes and corrections
19	October 2020	Changes and corrections
20	August 2022	Adding warnings of Safety Precautions
21	March 2023	Adding descriptions of NB3Q/NB5Q/NB7W/NB10W-TW□□B(-V1).
22	September 2023	Updating communication list for NB3Q/NB5Q/NB7W/NB10W-TW□□B-V1.
